

## Contents

<i>Preface</i>	<i>page ix</i>
<b>1 Introduction</b>	<b>1</b>
<i>Carolus J. Schrijver, Frances Bagenal, and Jan J. Sojka</i>	
1.1 Comparative heliophysics	1
1.2 Exoplanets	5
1.3 Cool stars and their space weather	6
1.4 Astrospheres, stellar winds, and cosmic rays	8
1.5 Astrophysical dynamos and space weather	9
1.6 Heliophysics of planetary atmospheres	11
1.7 Aeronomy and magnetospheres	13
1.8 Dimensionless heliophysics: from heliosphere to dust	14
1.9 Energetic particles as diagnostic tools for heliophysics	16
1.10 Radio signals as diagnostic tools for heliophysics	17
1.11 Chapter outlines	18
<b>2 Solar explosive activity throughout the evolution of the solar system</b>	<b>23</b>
<i>Rachel Osten</i>	
2.1 Key parameters important to a discussion of explosive events	24
2.2 Time scales: explosive events on stars, young to old	43
2.3 Take-away points	55
<b>3 Astrospheres, stellar winds, and the interstellar medium</b>	<b>56</b>
<i>Brian E. Wood and Jeffrey L. Linsky</i>	
3.1 The spatial extent of the solar wind	56
3.2 Observed properties of the local interstellar medium	57
3.3 Introduction to heliospheric structure	60
3.4 Observational constraints on the global heliosphere	62
3.5 Effects of a variable ISM on past heliospheric structure	67

vi	<i>Contents</i>	
3.6	Detecting astrospheres	71
3.7	Long-term evolution of stellar winds	72
<b>4</b>	<b>Effects of stellar eruptions throughout astrospheres</b>	<b>80</b>
	<i>Ofer Cohen</i>	
4.1	Astrospheres in time	80
4.2	Coronal mass ejections in time	89
4.3	Coronal mass ejections and close-in exoplanets	98
<b>5</b>	<b>Characteristics of planetary systems</b>	<b>104</b>
	<i>Debra Fischer and Ji Wang</i>	
5.1	Overview of Keplerian orbits	105
5.2	Doppler surveys for exoplanets	106
5.3	Transit technique	110
5.4	Direct imaging	115
5.5	Microlensing	116
5.6	Astrometry	117
5.7	Comparative planetology	117
<b>6</b>	<b>Planetary dynamos: updates and new frontiers</b>	<b>126</b>
	<i>Sabine Stanley</i>	
6.1	Dynamo fundamentals	127
6.2	Planetary dynamos: updates	129
6.3	Planetary dynamos: new frontiers	138
6.4	Outlook	145
<b>7</b>	<b>Climates of terrestrial planets</b>	<b>147</b>
	<i>David Brain</i>	
7.1	Current climates of terrestrial planets	147
7.2	Evidence for climate change	150
7.3	How do climates change?	152
7.4	Atmospheric source and loss processes	156
7.5	Requirements and reservoirs for atmospheric escape to space	158
7.6	Atmospheric escape processes and rates	161
7.7	External drivers of escape	164
7.8	Internal drivers of escape	169
7.9	Frontiers	172
<b>8</b>	<b>Upper atmospheres of the giant planets</b>	<b>175</b>
	<i>Luke Moore, Tom Stallard, and Marina Galand</i>	
8.1	Thermospheres of the giant planets	176

<i>Contents</i>		vii
8.2	Ionospheres of the giant planets	181
8.3	Ionosphere–thermosphere–magnetosphere and solar wind coupling	187
8.4	Auroral emissions	196
<b>9</b>	<b>Aeronomy of terrestrial upper atmospheres</b>	<b>201</b>
	<i>David E. Siskind and Stephen W. Bougher</i>	
9.1	Global mean upper-atmospheric structure	203
9.2	How do neutral dynamics affect planetary ionospheres?	211
9.3	Summary and outlook	224
<b>10</b>	<b>Moons, asteroids, and comets interacting with their surroundings</b>	<b>226</b>
	<i>Margaret G. Kivelson</i>	
10.1	Physics of large-scale processes in space plasmas	226
10.2	Characterizing the plasma that interacts with solar-system bodies	229
10.3	Effects of the electrical properties of an obstacle in the flow	234
10.4	The interaction region and the role of MHD waves	238
10.5	Moons with magnetic fields permanent or inductive	240
10.6	Moons without atmospheres	244
10.7	Moons with atmospheres or other sources of neutrals	245
10.8	Small bodies in the solar wind	246
10.9	Summary and expectations for other planetary systems	249
<b>11</b>	<b>Dusty plasmas</b>	<b>251</b>
	<i>Mihály Horányi</i>	
11.1	Motivation	251
11.2	Dust charging	255
11.3	Dust in planetary magnetospheres	257
11.4	Waves in dusty plasmas: possible role in comets	265
11.5	Summary and conclusions	267
<b>12</b>	<b>Energetic-particle environments in the solar system</b>	<b>270</b>
	<i>Norbert Krupp</i>	
12.1	Energetic particles from the Sun	275
12.2	Energetic particles in planetary magnetospheres	278
12.3	Summary	287
<b>13</b>	<b>Heliophysics with radio scintillation and occultation</b>	<b>289</b>
	<i>Mario M. Bisi</i>	
13.1	Observing radio waves	290
13.2	Astronomical radio sources and spacecraft beacons	292

Cambridge University Press

978-1-107-09047-7 - Heliophysics: Active Stars, their Astrospheres, and Impacts on Planetary Environments

Edited by Carolus J. Schrijver, Frances Bagenal and Jan J. Sojka

Table of Contents

[More information](#)

viii	<i>Contents</i>	
13.3	Radio occultation	293
13.4	Radio scintillation	293
13.5	Radio occultation, with a focus on planetary occultations	294
13.6	Interplanetary scintillation in the context of heliophysics	296
13.7	Faraday rotation in heliophysics	322
	<i>Appendix I Authors and editors</i>	327
	<i>List of illustrations</i>	329
	<i>List of tables</i>	334
	<i>References</i>	335
	<i>Index</i>	366

The plates are to be found between pages 116 and 117
