<i>Preface</i>	<i>page</i> xiii
PART I SETTING THE SCENE	
<b>1 What are singularities all about?</b>	3
1.1 Drop pinch-off: scaling and universality	5
1.2 Stationary cusps: persistent singularities	9
1.3 Shock waves: propagation	10
Exercises	12
<b>2 Blowup</b>	16
2.1 A scalar example	16
2.2 Crossover	20
2.3 Regularization: saturation	22
2.4 What is special about power laws?	26
Exercises	28
<b>3 Similarity profile</b>	32
3.1 The spatial structure of blowup	32
3.2 Stability	39
3.3 Similarity solutions and the dynamical system	45
3.4 Regularization	47
3.5 Continuation	50
3.5.1 Similarity description	55
Exercises	57
<b>4 Continuum equations</b>	63
4.1 General ideas	63
4.2 The Navier–Stokes equation	64
4.3 Boundary conditions	68

4.4	Free surface motion	70
4.5	Special limits	72
4.5.1	Potential flow	72
4.5.2	Two-dimensional flow	74
4.5.3	Stokes flow	76
4.6	Elasticity	77
	Exercises	82
<b>5</b>	<b>Local singular expansions</b>	89
5.1	Potential flow in a corner	89
5.2	Potential flow around a two-dimensional airfoil	93
5.3	Stokes waves	97
5.4	Electric fields near tips: Taylor cones	99
5.5	Mixed boundary conditions	102
5.6	Viscous flow in corners and Moffatt eddies	105
	Exercises	110
<b>6</b>	<b>Asymptotic expansions of PDEs</b>	115
6.1	Thin film equation	115
6.1.1	Hele-Shaw flow	121
6.2	Slender jets	123
	Exercises	129
 <b>PART II FORMATION OF SINGULARITIES</b>		
<b>7</b>	<b>Drop breakup</b>	143
7.1	Overview and dimensional analysis	143
7.1.1	Surface tension–viscosity–inertia balance	144
7.1.2	Surface tension–inertia balance	145
7.1.3	Surface tension–viscosity balance	146
7.2	Viscous breakup	147
7.2.1	Lagrangian transformation	147
7.2.2	Similarity solutions	149
7.3	Generic breakup	154
7.3.1	The universal solution	156
7.3.2	Stability	164
7.4	Fluctuating jet equations	169
7.5	Inviscid breakup	172
7.6	Crossover	176
7.7	Fluid–fluid breakup	177
	Exercises	182

<i>Contents</i>		ix
<b>8</b>	<b>A numerical example: drop pinch-off</b>	186
	8.1 Finite-difference scheme	186
	8.2 Time stepping and stability	191
	8.3 Grid refinement	198
	8.4 Analysis of pinching	200
	Exercises	203
<b>9</b>	<b>Slow convergence</b>	207
	9.1 Mean curvature flow	207
	9.2 Center-manifold analysis	209
	9.3 Bubbles	214
	9.3.1 Basics	214
	9.3.2 Slender body theory	218
	9.3.3 Cavity dynamics	220
	9.3.4 Approach to the fixed point	223
	Exercises	226
<b>10</b>	<b>Continuation</b>	230
	10.1 Post-breakup solution: viscous thread	230
	10.2 Regularization: thread formation for viscoelastic materials	239
	10.2.1 Dilute polymer solutions	240
	10.2.2 The beads-on-a-string configuration	243
	10.3 Crossover: bubbles and satellites	249
	Exercises	252
<b>PART III PERSISTENT SINGULARITIES: PROPAGATION</b>		
<b>11</b>	<b>Shock waves</b>	259
	11.1 Burgers' equation	259
	11.2 Similarity description	264
	11.3 Conservation laws: shocks and unique continuation	268
	11.4 Viscosity solutions	272
	11.5 Compressible gas flow	275
	11.5.1 Unique continuation for systems	279
	11.6 Imploding spherical shocks	285
	11.6.1 Geometrical shock dynamics	289
	Exercises	292
<b>12</b>	<b>The dynamical system</b>	298
	12.1 Overview	298
	12.2 Periodic orbits: a toy model	299

12.3	Discrete self-similarity in the implosion of polygonal shocks	302
12.4	Chaos	307
	Exercises	310
<b>13</b>	<b>Vortices</b>	313
13.1	Point vortices in inviscid fluid flow	316
13.1.1	Vortex motion	316
13.2	Vortex filaments	322
13.2.1	Corner singularity of a vortex filament	326
13.3	Vortex sheets	328
13.3.1	Linear instability of vortex sheets	333
13.3.2	Moore's singularity of vortex sheets	335
13.3.3	Continuation of Moore's singularity	339
13.4	Vortices in the Ginzburg–Landau equation	341
13.4.1	Structure of stationary vortices	343
13.4.2	The renormalized energy	346
13.4.3	Dynamics of Ginzburg–Landau vortices	349
13.5	Nonlinear Schrödinger equation	352
	Exercises	354
<b>14</b>	<b>Cusps and caustics</b>	358
14.1	Viscous free surface cusps	358
14.2	Singularity theory	364
14.3	Hele-Shaw flow	366
14.4	Optical caustics	372
14.5	The wavelength scale	378
	Exercises	383
<b>15</b>	<b>Contact lines and cracks</b>	390
15.1	Driven singularities	390
15.2	A spreading drop	390
15.2.1	Voinov solution: the universal singularity	394
15.2.2	Regularization: inner region	398
15.2.3	The drop: outer region	403
15.2.4	The global problem: matching	408
15.3	A moving crack	409
15.3.1	Universal tip singularity	410
15.3.2	Inner problem: the fracture energy	415

<i>Contents</i>		xi
15.3.3	The <i>J</i> -integral	417
15.3.4	The global problem	420
	Exercises	423
<i>Appendix A</i>	<i>Vector calculus</i>	427
<i>Appendix B</i>	<i>Index notation and the summation convention</i>	431
<i>Appendix C</i>	<i>Dimensional analysis</i>	434
	<i>References</i>	436
	<i>Index</i>	446
