

Contents

<i>Preface</i>	<i>page</i> xiii
1 Historical perspective	1
1.1. Early development of second-harmonic generation as a surface probe	1
1.2. Early development of sum-frequency spectroscopy for surface studies	4
1.3. Maturing of SHG and SFG for surface studies	6
1.4. Prospects	7
2 Basics of nonlinear optics	13
2.1. Maxwell's equations in a medium	13
2.2. Linear and second-order nonlinear responses	14
2.3. Multipole expansion of nonlinear polarization	15
2.4. Structural symmetry of nonlinear susceptibilities	16
2.5. Nonlinear susceptibilities versus nonlinear polarizabilities	18
2.6. Microscopic expression of nonlinear polarizabilities	20
2.7. Summary	20
Appendix: Multipole expansion of nonlinear polarization and definition of electric-dipole and electric-quadrupole nonlinear susceptibilities	21
3 Basic theory for surface sum-frequency generation	23
3.1. General description	23
3.2. Sum-frequency generation from an interfacial system with two semi-infinite bulk media	25
3.3. Sum-frequency radiation from a polarization sheet	27
3.4. Bulk contribution to sum-frequency generation	31
3.5. Sum-frequency generation from both surface and bulk	33
3.6. Surface and bulk nonlinear susceptibilities	34
	vii

viii	<i>Contents</i>	
	3.7. Surface versus bulk contribution	37
	3.8. Sum-frequency generation for material characterization	38
	3.9. Summary	41
	Appendices	
	3.1. Alternative derivation of sum-frequency generation from an interfacial layer	43
	3.2. Expressions for effective surface nonlinear susceptibilities and true surface and bulk nonlinear susceptibilities	46
	3.3. Separate deduction of true bulk nonlinear susceptibility from transmitted sum-frequency generation measurement	49
4	Experimental considerations	51
	4.1. General considerations	51
	4.2. Various sum-frequency spectroscopic techniques	54
	4.2.1. Sum-frequency spectroscopy with narrowband inputs	54
	4.2.2. Sum-frequency spectroscopy with a broadband input and a multiplex detection scheme	56
	4.2.3. Fourier transform sum-frequency spectroscopy (FT-SFS)	58
	4.3. Phase-sensitive sum-frequency spectroscopy	59
	4.3.1. Phase measurement with narrowband inputs	61
	4.3.2. Phase measurement with the broadband multiplex scheme	63
	4.4. Time-domain sum-frequency spectroscopy	64
	4.5. Time-resolved ultrafast sum-frequency spectroscopy	68
	Appendices	
	4.1. Analytical details on Fourier-transform sum-frequency spectroscopy	70
	4.2. Underlying theory behind phase measurement in sum-frequency spectroscopy with narrowband inputs	71
	4.3. Underlying theory behind phase measurement of sum-frequency spectroscopy with the broadband multiplex scheme	72
5	Characterization of bulk materials	75
	5.1. Probing crystalline materials with ED-allowed SHG/SFG	75
	5.1.1. Probing structural phase transitions	76
	5.1.2. Probing structures of magnetic crystals	77
	5.1.3. Probing current, spin-polarized current, and spin current in a crystal	79
	5.1.4. Probing phonons of a crystal	84
	5.1.5. Surface-induced polar ordering in a bulk	87
	5.2. Electric-quadrupole sum-frequency spectroscopy	91
	5.2.1. Accessible bulk electric-quadrupole nonlinear susceptibility elements	91

<i>Contents</i>		ix
5.2.2.	Electric-quadrupole sum-frequency spectroscopy of bulk materials	92
Appendices		
5.1.	Analytical details on second-harmonic generation from Cr ₂ O ₃	96
5.2.	Accessible bulk electric-quadrupole nonlinear susceptibility elements and electric-quadrupole nonlinear polarizability of molecules	98
6	Molecular adsorbates at interfaces	102
6.1.	Underlying theory	102
6.2.	Electronic and vibrational spectra of adsorbates	104
6.3.	Molecular orientations of adsorbates	106
6.4.	Adsorption isotherms for adsorbates at buried interfaces	111
6.5.	Co-adsorption and competitive adsorption	113
6.6.	Molecular monolayers at interfaces	115
6.7.	Surface reactions	120
6.8.	Comparison of SFVS with PM-IRRAS for probing adsorbates	127
7	Structures and properties of solid surfaces	132
7.1.	General description	132
7.2.	Studies of solid surfaces by second harmonic generation	133
7.3.	Sum-frequency spectroscopy of surface phonons	136
7.4.	Sum-frequency spectroscopy as a complementary tool for X-ray determination of surface structures	139
7.5.	Interfacial structures and surface melting of ice	139
7.6.	Structure of solid surfaces buried in liquid	142
8	Interfacial liquid structures	145
8.1.	General description	145
8.2.	Liquid/vapor interfaces	147
8.2.1.	Polar liquid/vapor interfaces	147
8.2.2.	Nonpolar liquid/vapor interfaces	151
8.2.3.	Water/vapor interfaces	154
8.2.4.	Surface freezing of liquids	162
8.3.	Ions at water/vapor interfaces	163
8.3.1.	Probing ions at water/vapor interfaces	164
8.3.2.	Emergence of ions from solutions at water/vapor interfaces	166
8.3.3.	Effect of ions on molecular adsorption at water/vapor interfaces	169
8.4.	Water structure underneath a Langmuir monolayer and the ion effect	169

x	<i>Contents</i>	
	8.5. Molecular structure of charged water interfaces	173
	8.6. Ions at hydrophobic water interfaces	177
	8.7. Charging and reactions at hydrophilic water/solid interfaces	179
	8.8. Surface structure of ethanol at ethanol/ α -alumina interfaces	185
	8.9. Interfacial structure of ionic liquids	186
	Appendix: Contribution of electric double layer to SFG	190
9	Interfaces of polymers and organic materials	197
	9.1. Introduction	197
	9.2. Polymer surfaces in air	199
	9.3. Environmental effects on polymer surfaces	205
	9.4. Modification of polymer surfaces	207
	9.4.1. Wet etching	208
	9.4.2. Plasma etching and UV irradiation	209
	9.4.3. Mechanical rubbing	210
	9.5. Polymer/solid interfaces	213
	9.6. Organic electronic and optoelectronic devices	217
10	Biomolecules and biological interfaces	224
	10.1. Introduction	224
	10.2. Membranes	225
	10.3. Biomolecules at interfaces	234
11	Sum-frequency chiral spectroscopy	243
	11.1. Background on chiral spectroscopy	244
	11.2. Basic theory for chiral sum-frequency spectroscopy	245
	11.3. SF chiral spectroscopy on electronic transitions	246
	11.3.1. Theory	246
	11.3.2. Experiment	248
	11.4. SF chiral spectroscopy on vibrational transitions	254
	11.5. Electronic-vibrational double resonance	256
	11.6. Second harmonic generation as a chiral probe	258
	11.7. Chiral sum-frequency microscopy	261
	11.8. Prospects	262
	Appendices	
	11.1. Coupled-oscillator model for electronic nonlinear optical activity	263
	11.2. Theory for electronic-vibrational doubly resonant SF chiral spectroscopy	264
12	Miscellaneous topics	268
	12.1. Electrochemical interfaces	268
	12.2. Ultrafast surface dynamics	276
