	<i>Preface</i>	<i>page xi</i>
1	A selective review of basic probability	1
	1.1 The axioms of probability theory	1
	1.2 Independence and conditional probability	5
	1.3 Random variables and their distribution	8
	1.4 Functions of a random variable	11
	1.5 Expectation of a random variable	16
	1.6 Frequently used distributions	20
	1.7 Failure rate functions	24
	1.8 Jointly distributed random variables	25
	1.9 Conditional densities	27
	1.10 Correlation and covariance	27
	1.11 Transformation of random vectors	29
2	Convergence of a sequence of random variables	40
	2.1 Four definitions of convergence of random variables	40
	2.2 Cauchy criteria for convergence of random variables	51
	2.3 Limit theorems for sums of independent random variables	55
	2.4 Convex functions and Jensen's inequality	58
	2.5 Chernoff bound and large deviations theory	60
3	Random vectors and minimum mean squared error estimation	73
	3.1 Basic definitions and properties	73
	3.2 The orthogonality principle for minimum mean square error estimation	75
	3.3 Conditional expectation and linear estimators	79
	3.3.1 Conditional expectation as a projection	79
	3.3.2 Linear estimators	81
	3.3.3 Comparison of the estimators	82
	3.4 Joint Gaussian distribution and Gaussian random vectors	84
	3.5 Linear innovations sequences	90
	3.6 Discrete-time Kalman filtering	91
		vii

4	Random processes	103
	4.1 Definition of a random process	103
	4.2 Random walks and gambler's ruin	106
	4.3 Processes with independent increments and martingales	108
	4.4 Brownian motion	110
	4.5 Counting processes and the Poisson process	111
	4.6 Stationarity	115
	4.7 Joint properties of random processes	118
	4.8 Conditional independence and Markov processes	118
	4.9 Discrete-state Markov processes	122
	4.10 Space-time structure of discrete-state Markov processes	129
5	Inference for Markov models	143
	5.1 A bit of estimation theory	143
	5.2 The expectation-maximization (EM) algorithm	148
	5.3 Hidden Markov models	152
	5.3.1 Posterior state probabilities and the forward-backward algorithm	153
	5.3.2 Most likely state sequence – Viterbi algorithm	157
	5.3.3 The Baum–Welch algorithm, or EM algorithm for HMM	158
	5.4 Notes	160
6	Dynamics of countable-state Markov models	167
	6.1 Examples with finite state space	167
	6.2 Classification and convergence of discrete-time Markov processes	169
	6.3 Classification and convergence of continuous-time Markov processes	172
	6.4 Classification of birth–death processes	175
	6.5 Time averages vs. statistical averages	177
	6.6 Queueing systems, M/M/1 queue and Little's law	178
	6.7 Mean arrival rate, distributions seen by arrivals, and PASTA	181
	6.8 More examples of queueing systems modeled as Markov birth–death processes	184
	6.9 Foster–Lyapunov stability criterion and moment bounds	186
	6.9.1 Stability criteria for discrete-time processes	186
	6.9.2 Stability criteria for continuous-time processes	193
7	Basic calculus of random processes	206
	7.1 Continuity of random processes	206
	7.2 Mean square differentiation of random processes	212
	7.3 Integration of random processes	216
	7.4 Ergodicity	223
	7.5 Complexification, Part I	229
	7.6 The Karhunen–Loève expansion	231

	7.7 Periodic WSS random processes	238
8	Random processes in linear systems and spectral analysis	248
	8.1 Basic definitions	248
	8.2 Fourier transforms, transfer functions, and power spectral densities	252
	8.3 Discrete-time processes in linear systems	258
	8.4 Baseband random processes	260
	8.5 Narrowband random processes	263
	8.6 Complexification, Part II	269
9	Wiener filtering	280
	9.1 Return of the orthogonality principle	280
	9.2 The causal Wiener filtering problem	283
	9.3 Causal functions and spectral factorization	284
	9.4 Solution of the causal Wiener filtering problem for rational power spectral densities	288
	9.5 Discrete-time Wiener filtering	292
10	Martingales	304
	10.1 Conditional expectation revisited	304
	10.2 Martingales with respect to filtrations	310
	10.3 Azuma–Hoeffding inequality	313
	10.4 Stopping times and the optional sampling theorem	316
	10.5 Notes	321
11	Appendix	325
	11.1 Some notation	325
	11.2 Convergence of sequences of numbers	326
	11.3 Continuity of functions	330
	11.4 Derivatives of functions	331
	11.5 Integration	333
	11.5.1 Riemann integration	333
	11.5.2 Lebesgue integration	335
	11.5.3 Riemann–Stieltjes integration	335
	11.5.4 Lebesgue–Stieltjes integration	336
	11.6 On convergence of the mean	336
	11.7 Matrices	339
12	Solutions to even numbered problems	344
	<i>References</i>	411
	<i>Index</i>	412
