## 1 Energy, economics, and climate change  
1.1 Energy: an indispensable resource  
1.2 Energy 101: a taxonomy  
1.3 Energy and economic growth  
1.4 Energy, greenhouse gases, and the environment  
1.5 Energy, economy, the environment, and sustainability  
1.6 A wicked problem  
1.7 Summary

## 2 The Earth’s climate system  
2.1 Weather and climate  
2.2 Natural agents of climate change  
2.3 Earth’s global energy budget and the greenhouse effect  
2.4 Summary

## 3 Greenhouse gases  
3.1 Distinguishing features  
   - Atmospheric concentrations  
   - Atmospheric lifetimes and global warming potentials  
   - Radiative forcings  
3.2 Greenhouse gas emissions: recent trends
### Table of Contents

3.3 A macro view of contributing factors 45  
3.4 Whither emissions? 47  
3.5 The carbon cycle 51  
3.6 Summary 53  

4 Global warming ................................ 55  
4.1 The Earth’s temperature history 55  
  Proxy and instrument records 55  
  Not without controversy 59  
  The CO₂-temperature linkage 61  
  Temperature stasis 62  
  The instrument record redux 67  
4.2 Climate models and future warming 71  
4.3 Feedback mechanisms 74  
  Effect of atmospheric water vapor 74  
  Effect of ice cover on the Earth’s albedo 75  
  Decomposition of organic matter 76  
4.4 Summary 77  

5 Consequences of global warming ................. 80  
5.1 The Arctic: canary in a mine shaft 80  
5.2 Changing sea levels 83  
  The effect of glaciers 83  
  The effect of ice sheets 84  
  Rising seas 87  
5.3 Extreme weather events 90  
5.4 The built environment 94  
5.5 The natural environment 96  
5.6 Food production 98  
5.7 Human health and security 101  
5.8 Abrupt climate change 102  
5.9 Summary 105  

6 Mitigation, adaptation, and geoengineering .......... 108  
6.1 Energy efficiency and conservation 109  
6.2 Decarbonization of electric power: coal – the 111  
  800-pound gorilla  
  The natural gas conundrum 111  
  Nuclear and renewable energy 116  
6.3 Decarbonization of transportation 120  
  Electric vehicles: back to the future 121  
  Biofuels: some better than others 122
## Contents

6.4 Carbon capture and sequestration:  
the CCS challenge  
124  
6.5 A sobering perspective: the notion of wedges  
129  
6.6 Economic factors  
134  
6.7 Adaptation  
137  
6.8 Geoengineering  
141  
Solar radiation management  
141  
Carbon dioxide removal  
142  
Ramifications and risks  
143  
6.9 Summary  
145  

7 Public policy options   
148  
7.1 Cap-and-trade  
148  
7.2 A carbon tax  
150  
7.3 Cap-and-trade or a carbon tax?  
154  
7.4 Regulatory options  
156  
7.5 Financial incentives  
158  
7.6 Summary  
159  

8 The politics of global warming: a history   
lesson and future prospects   
161  
8.1 The Intergovernmental Panel on Climate Change  
162  
8.2 The Kyoto Protocol  
163  
8.3 Implementation of the Kyoto Protocol  
166  
8.4 Beyond Kyoto  
169  
8.5 Copenhagen and subsequent meetings  
172  
8.6 The Washington debate  
177  
Tilting at congressional windmills  
177  
Another lever to pull: enter the EPA  
180  
8.7 China: serious about emissions  
184  
8.8 From the bottom up  
186  
State and city governments  
186  
The corporate sector  
191  
8.9 Summary  
196  

9 Dissenting opinions: the great hoax  
199  
9.1 The political-corporate axis  
199  
9.2 Science or pseudoscience – credible or conspiratorial?  
202  
9.3 The human element  
208  
9.4 An analogy  
212  
9.5 Summary  
213
## Contents

10  The ethics of climate change ................................. 214
    10.1 Ethical dimensions of climate change 214
    10.2 Ethical theories and principles 217
        Imperatives 217
        Consequences 219
        Values and virtues 220
        Aristotle or Rand? 222
        The Precautionary Principle 226
        The bottom line 227
    10.3 Religious traditions 228
    10.4 A role for ethics 234
    10.5 Summary 239

11  A way forward .................................................. 242
    11.1 Economic realities and unlikely outcomes 243
    11.2 Elements of an action plan: mitigation
        and adaptation 246
        Mitigation 246
        Pathways to deep decarbonization 250
        Adaptation 250
    11.3 Elements of an action plan: public policy 251
    11.4 Elements of an action plan: personal and
        social values 254
    11.5 Epilogue 257

Appendix A  Units and conversion factors 259
Appendix B  Fossil fuels 261
Appendix C  Anthropogenic sources of natural gas
            and methane 267
Appendix D  Environmental time scales and inertia 271
Appendix E  Coal-fired power plants: operating conditions
            and costs of carbon capture and sequestration 275
