time-dependent differential equations, 52
  Toynbee, Arnold, 1–2
capital growth rate behaviour, 358
capital-output ratio behaviour, 359
concavity of, 155–6, 163–4, 335, 336, 347, 349–57, 359, 360, 376
consumption behaviour, 357
  and Euler equation, 357–60
  exponential utility functions, 281–9
  negative exponential utility function, 286, 347
  in optimal growth theory see optimal growth theory
  power utility function, 269–81, 347–8
  Ramsey’s see optimal growth theory
  real income per person growth rate, 355
  savings rate behaviour, 356
  Walras-Leontief case, 43–6, 49, 106, 115
  Walras-Leontief production function, 97
  Wealth of Nations, xviii–xix, 1–2, 377
  welfare
  and consumption, 360–1
  and equal opportunity, 13
  and equity, 13
  and expenditure, 22
  and income, 12–14
  and optimal growth, 410–11
  welfare flows, 360, 376–7
  Williamson, Samuel H., 183–4, 342
  world population, 14–15

Yuhn, Ky-Hyang, 116
