<i>Preface</i>	<i>page</i> xi
<i>Introducing the Universe</i>	xiv
I Conceptual foundations	1
I Newtonian cosmology	3
1.1 Newtonian gravitation	3
1.2 Universal expansion	5
2 General Relativity	9
2.1 Covariance	10
2.2 Equivalence	11
2.3 Curvature	12
2.4 Relativistic gravitational dynamics	14
3 Relativistic cosmology	17
3.1 Cosmological coordinates	17
3.2 Expansion and curvature	18
3.3 Redshifts	18
3.4 Hubble Relation	19
3.5 Expansion history	21
II General Relativity	25
4 General covariance	27
4.1 Tensors	28
4.2 Metric tensor (II)	32

viii	Contents
4.3	Tensor manipulations 33
4.4	Derivatives 35
5	Equivalence Principle 38
5.1	Weak Equivalence Principle 38
5.2	Strong Equivalence Principle 43
6	Space-time curvature 48
6.1	Simple curvature 48
6.2	Uniformly curved surfaces 49
6.3	Metric measures of curvature 51
7	Einstein Field Equations of gravitation 55
7.1	Sources of gravitation 55
7.2	Field Equations 57
7.3	Summary 60
III	Universal expansion 63
8	Cosmological Field Equations 65
8.1	Cosmological coordinates 65
8.2	Field Equations of Cosmology 69
8.3	Energy densities 73
8.4	Friedmann Equations 78
8.5	Simple expansion models 80
8.6	Reality check: expanding space 81
9	Cosmography 83
9.1	Model parameters 83
9.2	Expansion descriptors 88
9.3	Expansion diagnostics 98
10	Expansion dynamics 108
10.1	Curvature 108
10.2	Expansion fate 109
10.3	Horizons 112
10.4	Expansion realities 116

IV Expansion models	123
11 Radiation	125
11.1 Cosmological Microwave Background Radiation	126
11.2 Neutrinos	128
11.3 Entropy	129
11.4 Radiation-only expansion models	130
12 Matter	133
12.1 Matter-only expansion models	134
12.2 Baryonic matter	136
12.3 Dynamical mass estimates	139
12.4 Gravitational lensing	144
12.5 Dark matter	150
12.6 Modified Newtonian dynamics	152
13 Dark energy	154
13.1 Forms of dark energy	154
13.2 Cosmological Constant models	159
13.3 Alternatives to dark energy	160
14 Observational constraints	164
14.1 Primary expansion diagnostics	164
14.2 Secondary expansion diagnostics	169
14.3 Model validation	171
15 Concordance Cosmological Model	175
15.1 Expansion	176
15.2 Observational verifications	179
15.3 Expansion descriptors	180
15.4 Horizons	183
V Expansion history	187
16 Particle Era	189
16.1 Inflation	191
16.2 Post-Inflation expansion	199
16.3 Primordial nucleosynthesis	202

x	Contents
17 Plasma Era	209
17.1 Matter density perturbations	210
17.2 Recombination	219
17.3 CMB anisotropies	220
18 Galaxy Era	226
18.1 Structure formation	226
18.2 Dark Ages	227
18.3 Galaxies	228
18.4 Large-scale structure	230
18.5 The future ...	233
19 Afterword: the new modern cosmology	234
VI Appendices	239
Appendix A – Differential geometry	241
A.1 Affine connection	241
A.2 Geodesic paths	245
A.3 Covariant differentiation	248
A.4 Curvature tensors	251
A.5 Bianchi Identities	256
A.6 The Einstein Tensor	257
Appendix B – Newtonian approximations	259
Appendix C – Useful numbers	264
Appendix D – Symbols	266
<i>References</i>	268
<i>Index</i>	270
