Zagarola, M. V., 33, 45, 47, 323, 350
Subject index

Added mass, 67, 254
Anisotropic material, 71
Annular conduit, 39, 40, 41, 180
Arc length, 92, 375
Archimedes’ law, 62, 94–96
Archimedes number, 63
Atomic blast, 21
Automobile tire, 358
Axisymmetric flow, 121

Base vectors, 364, 376
Bernoulli equations
  engineering, 302
  irrotational, 230
  streamline, 228, 303
  variable density, 336–337
Bingham fluid, 9, 144, 188
Blasius equation, 33, 285
Blood rheology or blood vessels, 51–52, 188–189, 223–224
Bond number, 15, 16, 17, 26, 98, 174
Borda–Carnot equation, 326, 329–330
Boundary conditions
  approximations at gas–liquid interfaces, 173–174
  stress, 151–152
  symmetry, 178–179
  velocity, 149–150
Boundary layer
  definition, 236
  laminar momentum equation, 237, 239
  matching with outer region, 238–239
  separation, 247–251
  thickness, 60, 237, 241, 242, 245, 247, 278
  turbulent momentum equation, 277
Bubble
  formation, 105–106, 255
  spherical cap, 259–260
  surface tension, 97–98
  velocity field, 126, 220
  Buoyancy force, 62, 94–96

Capillary adhesion, 106–107
Capillary flotation, 107
Capillary length, 16, 98
Capillary number, 15, 17, 26, 185
Capillary pump, 225–226
Capillary rise, 98–99
Casson fluid, 188
Cauchy momentum equation, 136–137, 306
Cavitation, 47, 168, 320
Cavity flow, 185–186
Choked flow. See Compressible flow
Closure problem (turbulent flow), 268, 269
Coating
  blade, 219
  candy, 219
  dip, 25–26, 184–185
  slot, 185
  spin, 254–255
Colebrook equation, 33
Colebrook–White equation, 43
Combination of variables. See Similarity method
Compressible flow
  adiabatic, 341–343
  choked, 344–346
  isentropic, 346–349, 359–360
  isothermal, 337–341
  mechanical energy sinks, 301
  transonic, 360–361
Conservation equations
  linear momentum, 134–136, 295–298, 308
  mass, 110–111, 291–293, 295
  mechanical energy, 300–302, 306–308
  total energy, 341–342
Constitutive equations, 9–10, 141–142, 143–144
Contact angle or contact line, 97
Continuity equation, 110–111, 116
Continuum approximation, 11, 12
Control volume, 31, 33, 291–292
Coordinate surface, 91, 377
Coordinate systems
  Cartesian, 380–381
  cylindrical, 380–382
  orthogonal curvilinear, 376–384
  scale factors, 376–377, 378–379
  spherical, 382–383
Subject index

Couette flow, 166, 171, 177–178
Creeping flow, 198, 207, 213
Cross product, 366–367
Curl, 370, 379–380
Cylinder
  boundary-layer flow, 248–251
  potential flow, 230–232
  surface curvature, 100
D’Alembert’s paradox, 227, 232–233, 251
Darcy’s law or Darcy permeability, 68–73, 182–183, 206, 223–224
Davies–Taylor equation, 259–260
Deborah number, 15
Deformation (of a fluid), 4, 116
Density
  representative values, 6
Diffuser, 346–349, 351–352, 357, 360–361
Dilatation, 117, 118–119, 141–142
Dimensional analysis, 17–22, 169, 171–172
Dimensionless groups, 14–16
Dimensions, 3, 13
Direct numerical simulation (turbulent flow), 265
Disk (drag), 57–58
Dissipation. See Viscous dissipation
Divergence, 370, 379
Divergence theorem, 374
Dot product
  vector–tensor or tensor–tensor, 367–368
  vector–vector, 364–366
Drag coefficient or drag force
  bubble or droplet, 66, 220
  cylinder, 58–59, 157–158, 222–223
  disk, 57–58
  flat plate, 60–61
  form versus friction drag, 55, 59, 62, 157–158, 205–206, 251
  general, 54, 56, 153
  lubrication flow, 215–216
  packed bed, 74–75
  potential flow, 232–233
  related to wake velocity, 315–317
  sphere, 56–57, 153–154
Drag reduction, 34, 49
Drainage pipe, 321
Drop
  oscillation, 25
  surface tension, 97–98
  terminal velocity, 65–66, 79
  velocity field, 222
Dropping-mercury electrode, 222
Dyad or dyadic product, 367
Dynamic pressure, 35, 146–147
Dynamic similarity, 22
Eddy diffusivity, 270–272, 285, 287–288
Eiffel phenomenon, 57
Elliptical conduit, 181–182
Energy conservation. See Conservation equations
Entrance region, 161, 256, 322–325, 351
Equidimensional (Euler) equation, 203, 231
Equivalent pressure. See Dynamic pressure
Ergun equation, 74
Error function, 170
Falkner–Skan equation, 242, 260
Falling film, 127, 172–174, 183–184, 188
Fibrous material, 72, 182–193
Filtration, 113–114, 194–195
Flat plate
  boundary-layer thickness, 60, 241, 247, 278
  drag coefficient, 60–61
  laminar-flow analysis, 239–242, 246–247, 257
  suction, 259
  transition, 59–60
  turbulent-flow analysis, 277–279
Flocculation, 81
Flow separation. See Boundary layer
Fluctuations (turbulent flow), 262–263
Fluidized bed, 75–76, 82
Force calculations (general), 152–153
Force per unit volume, 132–134
Free surface, 172–175, 308
Friction factor, 30, 32, 35, 74
Friction velocity, 263
Froude number, 15, 16, 19, 310
Fully developed flow, 31, 161–165
Gas constant, 5
Gas cylinder, 358–359
Gauckler–Manning formula, 53
Generalized Newtonian fluids. See Non-Newtonian fluids
Geometric similarity, 22
Gradient, 370, 378
Gravitational acceleration or force, 5, 62
Haaland equation, 43
Hadamard–Rybczyński equation, 66, 126
Hagen–Poiseuille equation. See Poiseuille’s law
Heads, 303, 328
Heat-capacity ratio, 335
Home plumbing, 353
Honey, 48
Hubble’s law, 112–113
Hydraulic diameter, 39, 71, 286
Hydraulic fracturing, 49
Hydraulic jump, 309–311
Hydraulic lift, 102–103
Hydroelectric power, 305, 319
Ideal-gas law, 5
Identity tensor, 368–369

Subject index

Power-law fluid, 8, 144, 175–177, 257
Power number, 28
Prandtl–Kármán equation, 33, 276–277
Pressure. See also Dynamic pressure
boundary-layer flow, 237, 239
force, 90
fully developed flow, 165
interfaces, 151
inviscid flow, 228
lubrication flow, 190–191, 213
mechanical properties, 85
scales, 13–14, 204, 337
static fluids, 85–88
stress vector, 89
Projected areas, 55, 59, 92–93
Pump
capillary, 225–226
centrifugal, 327–328, 356
jet ejector, 317
positive displacement, 327
power required, 303–304
sump, 320–321
syringe, 48, 318
Rate of change for moving observer, 115–116
Rate of dilatation, 118
Rate of strain, 116–119, 139–141, 144
Rayleigh problem, 168–172
Rectangular conduit, 39, 40, 41
Reynolds averaging. See Time smoothing in turbulence
Reynolds number, 14–15
boundary-layer flow, 236, 251
creeping flow, 213
flat plate, 59–60
lubrication flow, 212–213
packed bed, 74
representative values, 13
tube flow, 32
turbulent, 264–266
Reynolds stress, 268–269, 284
Rheology, 7
Rigid-body rotation, 116, 119–120, 183
Rocket, 299–300
Rotating disk, 221, 257–258
Rotating rod, 166–168, 174–175
Roughness parameter, 42–43, 286–287
Rowing, 78
Scale factors. See Coordinate systems
Scales (of variables), 3, 12, 210–212
Separable solution, 200
Shaft work, 301–302
Shear rate, 4, 117, 144
Shear stress, 4, 131, 151–152
Shear thinning or thickening. See Power-law fluid
Shell balance, 86, 113
Shock, 346
SI system, 3, 5
Similarity method
steady flow past flat plate, 239–242
steady flow past wedge, 242
transient flow, flat plate, 169–172
Simple shear flow, 117–118, 120, 141
Siphon, 320, 352
Ski racing, 78–79
Slider bearing, 195–198, 215–216
Slip (at a surface), 150, 182
Sound, speed of, 335, 359–360
Sphere
added mass, 67, 254
creeping flow, 128, 158, 201–205, 206, 212, 220
drag coefficient or drag force, 56–57, 153–154
potential flow, 253
surface curvature, 100
terminal velocity, 62–66
torque, 220
Squeeze flow, 208–209, 214–215
Stagnation density, 347
Stagnation flow, 111–112, 123–124, 125, 147–149, 253–254, 260
Stagnation point, 124
Stagnation pressure, 347
Stagnation temperature, 347
Static pressure equation, 87
Stefan equation, 209
Stirred tank, 28
Stokes’ equation, 198
law, 56–57, 205–206
paradox, 206
Streaklines, 122–123
Stream function, 121–122, 204–205, 231–232
Streamlines, 115, 122–125, 204–205, 231–232
Stress, 4, 130–131
equilibrium, 136–137
scales, 13–14
symmetry, 145–146
tensor, 131–132
vector, 89, 131–132
Strohnaul number, 15, 213
Substantial derivative. See Material derivative
Sudden contraction, 326
Sudden expansion, 326, 329–330
Superficial velocity, 69
Surface area (differential), 377
Surface curvature. See Mean curvature
Surface tension, 10, 96–101, 151–152
representative values, 11
Symmetry conditions. See Boundary conditions
Tank emptying or filling, 293–295, 314, 332–335, 356, 358
Tapered channel, 191–194, 211–212
