
Contents

	<i>Preface</i>	<i>page ix</i>
1	The central force problem	1
	1.1 Angular momentum and Kepler's second law	2
	1.2 Conservation of energy	6
	Exercises	7
2	Conic sections	10
	2.1 Ellipses	10
	2.2 Hyperbolas	15
	2.3 Parabolas	18
	2.4 Summary	20
	Exercises	21
3	The Kepler problem	23
	3.1 Kepler's first law	24
	3.2 Eccentricity and energy	27
	3.3 Kepler's third law	28
	Exercises	31
4	The dynamics of the Kepler problem	36
	4.1 Anomalies and Kepler's equation	37
	4.2 Solution of Kepler's equation by the cycloid	40
	4.3 The parabolic case: cubic equations	41
	Exercises	46
5	The two-body problem	51
	5.1 Reduction to relative coordinates	52
	5.2 Reduction to barycentric coordinates	52
	Exercises	53

6	The n-body problem	55
	6.1 The Newton potential	56
	6.2 Maximal solutions	59
	6.3 The Lagrange–Jacobi identity	62
	6.4 Conservation of momentum	64
	6.5 Sundman’s theorem on total collapse	65
	6.6 Central configurations	66
	Exercises	72
7	The three-body problem	77
	7.1 Lagrange’s homographic solutions	77
	7.2 Euler’s collinear solutions	83
	7.3 The restricted three-body problem	84
	Exercises	94
8	The differential geometry of the Kepler problem	101
	8.1 Hamilton’s hodograph theorem	102
	8.2 Inversion and stereographic projection	107
	8.3 Spherical geometry and Moser’s theorem	112
	8.4 Hyperbolic geometry	118
	8.5 The theorem of Osipov and Belbruno	126
	8.6 Projective geometry	132
	8.7 Newton’s vs. Hooke’s law	146
	Exercises	151
9	Hamiltonian mechanics	166
	9.1 Variational principles	168
	9.2 The Hamilton equations	176
	9.3 Canonical transformations	179
	9.4 Equilibrium points and stability	182
	Exercises	188
10	The topology of the Kepler problem	194
	10.1 The geodesic flow on the 2-sphere	195
	10.2 The Kepler problem as a Hamiltonian system	197
	10.3 The group $SO(3)$ as a manifold	198
	10.4 The quaternions	199
	Exercises	206
	<i>References</i>	209
	<i>Index</i>	215
