<i>Preface</i>	<i>page xv</i>
Introduction and Constitutive Equations For Linearly Elastic Materials	1
I.1 Constitutive Equations for Linearly Elastic Materials	3
I.1.1 3-D Constitutive Equations for a Layer within a Laminated Shell	4
I.1.2 Constitutive Equations in Case of Negligible Transverse Normal Stress	6
I.1.3 Constitutive Equations in Case of Plane Stress (Classical Theories of Plates and Shells)	7
References	7
1 Classical Nonlinear Theories of Elasticity of Plates and Shells	8
1.1 Introduction	8
1.1.1 Literature Review	8
1.2 Large Deflection of Rectangular Plates	10
1.2.1 Green's and Almansi Strain Tensors for Finite Deformation	10
1.2.2 Strains for Finite Deflection of Rectangular Plates: Von Kármán Theory	13
1.2.3 Geometric Imperfections	17
1.2.4 Eulerian, Lagrangian and Second Piola-Kirchhoff Stress Tensors	17
1.2.5 Equations of Motion in Lagrangian Description	21
1.2.6 Elastic Strain Energy	21
1.2.7 Von Kármán Equation of Motion	22
1.2.8 Von Kármán Equation of Motion Including Geometric Imperfections	27
1.3 Large Deflection of Circular Cylindrical Shells	27
1.3.1 Euclidean Metric Tensor	27
1.3.2 Green's Strain Tensor in a Generic Coordinate System	29
1.3.3 Green's Strain Tensor in Cylindrical Coordinates	31
1.3.4 Strains for Finite Deflection of Circular Cylindrical Shells: Donnell's Nonlinear Theory	33
1.3.5 Geometric Imperfections in Donnell's Nonlinear Shell Theory	36
1.3.6 The Flügge-Lur'e-Byrne Nonlinear Shell Theory	37
1.3.7 The Novozhilov Nonlinear Shell Theory	38
1.3.8 The Sanders-Koiter Nonlinear Shell Theory	40

1.3.9	Elastic Strain Energy	40
1.3.10	Donnell's Nonlinear Shallow-Shell Theory	41
1.3.11	Donnell's Nonlinear Shallow-Shell Theory Including Geometric Imperfections	47
1.4	Large Deflection of Circular Plates	48
1.4.1	Green's Strain Tensor for Circular Plates	48
1.4.2	Strains for Finite Deflection of Circular Plates: Von Kármán Theory	49
1.4.3	Elastic Strain Energy for Circular Plates and Membranes	50
1.4.4	Von Kármán Equation of Motion for Circular Plates	51
1.5	Large Deflection of Spherical Caps	52
1.5.1	Green's Strain Tensor in Spherical Coordinates	52
1.5.2	Strains for Finite Deflection of Spherical Caps: Donnell's Nonlinear Theory	53
1.5.3	Donnell's Equation of Motion for Shallow Spherical Caps	54
1.5.4	The Flügge-Lur'e-Byrne Nonlinear Shell Theory	55
1.6	Large Deflection of Slightly Corrugated Shells	56
	References	57
2	Classical Nonlinear Theories of Doubly Curved Shells	60
2.1	Introduction	60
2.2	Doubly Curved Shells of Constant Curvature	60
2.2.1	Elastic Strain Energy	64
2.3	General Theory of Doubly Curved Shells	64
2.3.1	Theory of Surfaces	64
2.3.2	Green's Strain Tensor for a Shell in Curvilinear Coordinates	71
2.3.3	Strain–Displacement Relationships for Novozhilov's Nonlinear Shell Theory	74
2.3.4	Strain–Displacement Relationships for an Improved Version of the Novozhilov Shell Theory	77
2.3.5	Simplified Strain–Displacement Relationships	78
2.3.6	Elastic Strain Energy	78
2.3.7	Kinetic Energy	79
2.4	Pressure Load for Large Displacements	79
2.4.1	Virtual Work by Displacement Dependent Pressure	79
2.4.2	Pressure Applied to the Shell Surface	82
2.4.3	Pressurized Circular Cylindrical Shell: Numerical Solution	85
	References	89
3	Composite, Sandwich and Functionally Graded Materials: Advanced Nonlinear Shell Theories	90
3.1	Introduction	90
3.2	Composite Materials	90
3.3	Laminate under Plane Stress for Classical Shell Theories	92
3.3.1	Stress–Strain Relations for a Thin Lamina	92

3.3.2	Stress–Strain Relations for a Layer within a Laminate	94
3.3.3	Elastic Strain Energy for Laminated Shells	94
3.3.4	Elastic Strain Energy for Orthotropic and Cross-Ply Shells	94
3.4	Lamina and Laminate with Shear Deformation	96
3.4.1	Elastic Strain Energy for Laminated Shells	98
3.5	Sandwich Plates and Shells	98
3.6	Functionally Graded Materials and Thermal Effects	99
3.6.1	Functionally Graded Material in Plane Stress	101
3.6.2	Functionally Graded Material with Shear Deformation	102
3.7	Nonlinear Shear Deformation Theories for Moderately Thick, Laminated and Functionally Graded, Doubly Curved Shells	103
3.8	Nonlinear First-Order Shear Deformation Theory for Doubly Curved Shells of Constant Curvature	103
3.8.1	Elastic Strain Energy for Laminated Shells	105
3.8.2	Kinetic Energy with Rotary Inertia for Laminated Shells	106
3.9	Nonlinear Third-Order Shear Deformation Theory for Laminated, Doubly Curved Shells	107
3.9.1	Elastic Strain and Kinetic Energies for Laminated Shells	111
3.9.2	Elastic Strain Energy for Heated, Functionally Graded Shells	112
3.9.3	Kinetic Energy with Rotary Inertia for Functionally Graded Shells	113
3.9.4	Nonlinear Third-Order Shear Deformation Theory for Circular Cylindrical Shells	114
3.10	Thermal Effects on Plates and Shells	116
3.10.1	Isotropic Plates and Shells	116
3.10.2	Laminated Plates and Shells	117
3.11	Effect of Initial In-Plane Stress on a Vibrating Rectangular Plate	118
3.12	Effect of Initial Axial Stress on a Vibrating Circular Cylindrical Shell	119
3.13	Approximated Nonlinear First-Order Shear Deformation Theory for Conical Shells	120
	References	122
4	Nonlinear Shell Theory with Thickness Deformation	124
4.1	Introduction	124
4.2	Nonlinear Theory with Third-Order Thickness and Shear Deformation	126
4.3	Elastic Strain Energy for Isotropic and Laminated Shells	134
4.4	Kinetic Energy of the Shell	136
4.5	Formulation of the Theory for Circular Cylindrical Shells	136
4.6	Simply Supported Circular Cylindrical Shell Loaded by Pressure	139
4.7	Numerical Results for a Pressure Loaded Circular Cylindrical Shell	142
4.7.1	Displacement Independent Pressure Load (Distributed Radial Forces)	142
4.7.2	Displacement Dependent Pressure Load (Actual Pressure)	147
	References	148

5	Hyperelasticity of Soft Biological and Rubber Materials	151
5.1	Soft Materials: Rubbers, Foams and Biomaterials	151
5.2	Strain Tensors and Principal Stretches	154
5.3	Invariants of the Strain Tensors	159
5.4	Stress Tensors	160
5.5	Strain Energy Density Function	162
5.6	Isotropic Hyperelastic Materials	164
5.6.1	Representation in Terms of Invariants	165
5.6.2	Representation in Terms of Principal Stretches	166
5.7	Incompressible Hyperelastic Materials	167
5.7.1	Incompressible Isotropic Materials	168
5.8	Compressible Hyperelastic Materials	170
5.8.1	Compressible Isotropic Materials	172
5.8.2	Compressible Isotropic Materials in Terms of Invariants	172
5.9	Hyperelastic Models of Incompressible Isotropic Materials	173
5.9.1	Neo-Hookean Model	174
5.9.2	Mooney-Rivlin Model	179
5.9.3	Ogden Model	183
5.9.4	Gent Model	187
5.9.5	Fung-Demiray Model	191
5.10	Hyperelastic Models of Compressible Isotropic Materials	193
5.10.1	Neo-Hookean Compressible Model	193
5.10.2	Mooney-Rivlin Compressible Model	195
5.10.3	Ogden Compressible Model	196
5.10.4	Linearly Elastic Material	196
5.11	Anisotropic Hyperelastic Materials	197
5.11.1	Transversely Isotropic Materials	197
5.11.2	Transversely Isotropic Incompressible Materials	199
5.11.3	Composite Materials with Two Families of Fibres	199
5.11.4	Materials with Two Orthogonal or Equivalent Families of Fibres	201
5.12	Hyperelastic Models of Anisotropic Materials	201
5.12.1	Standard Reinforcing Model for Transversely Isotropic Incompressible Materials	201
5.12.2	Horgan-Saccomandi Model for Transversely Isotropic Incompressible Materials	202
5.12.3	Holzappel–Gasser–Ogden Model for Two Families of Fibres	202
5.12.4	Holzappel–Ogden Model for Fibre Dispersion	207
5.13	Model of Artery Wall	213
5.13.1	Strain Energy of the Wall	215
5.13.2	Residual Stresses in Arterial Wall	215
	References	223
6	Introduction to Nonlinear Dynamics	225
6.1	Introduction	225
6.2	Periodic Nonlinear Vibrations: Softening and Hardening Systems	225

6.3	Numerical Integration of the Equations of Motion	228
6.4	Local Geometric Theory	230
6.5	Bifurcations of Equilibrium	232
6.5.1	Saddle-Node Bifurcation	233
6.5.2	Pitchfork Bifurcation	233
6.5.3	Transcritical Bifurcation	235
6.5.4	Hopf Bifurcation	235
6.6	Poincaré Maps	237
6.7	Bifurcations of Periodic Solutions	239
6.7.1	Floquet Theory	240
6.7.2	Period-Doubling Bifurcation	243
6.7.3	Neimark-Sacker Bifurcation	243
6.8	Numerical Continuation Methods	244
6.8.1	Arclength Continuation of Fixed Points	244
6.8.2	Pseudo-Arclength Continuation of Fixed Points	245
6.8.3	Pseudo-Arclength Continuation of Periodic Solutions	247
6.9	Nonlinear and Internal Resonances	249
6.10	Chaotic Vibrations	250
6.11	Lyapunov Exponents	251
6.11.1	Maximum Lyapunov Exponent	251
6.11.2	Lyapunov Spectrum	253
6.12	Lyapunov Dimension	254
6.13	Discretization of the System: Galerkin Method and Lagrange Equations	255
	References	257
7	Viscoelasticity and Damping	258
7.1	Introduction	258
7.2	Viscous Damping and Modal Damping	258
7.2.1	Modal Damping	261
7.2.2	Modal Damping for Geometrically Nonlinear Vibrations	263
7.3	Hysteretic Damping	264
7.4	Linear Viscoelasticity	266
7.4.1	Response to Arbitrary Strain History	268
7.4.2	Fading Memory	271
7.4.3	Mechanical Models for the Relaxation Modulus	271
7.4.4	Models with Fractional Derivatives	275
7.4.5	Effect of Temperature	276
7.4.6	Fitting Experimental Data for Relaxation	277
7.4.7	Three-Dimensional Linear Constitutive Equations	279
7.5	Viscoelasticity for Harmonic Oscillations	280
7.5.1	Dynamic Stiffness	280
7.5.2	Standard Linear Solid under Harmonic Oscillations	282
7.5.3	Hysteresis Loop	284
7.5.4	Energy Storage and Dissipation	286
7.5.5	Linear Single-Degree-of-Freedom Systems	289

7.5.6	Linear Multi-Degree-of-Freedom Systems	295
7.5.7	Nonlinear Materials	295
7.5.8	Kelvin-Voigt Model for Geometrically Nonlinear Vibrations	297
7.5.9	Modelling Nonlinear Damping	301
7.6	Quasi-Linear Viscoelasticity of Soft Biological Tissues	312
7.6.1	Instantaneous Elastic Response	314
7.6.2	The Reduced Relaxation Function	314
7.6.3	Standard Linear Solid Model	314
7.6.4	Continuous Spectrum of Relaxation for Living Tissues	316
7.6.5	Three-Dimensional QLV Theory	320
7.6.6	QLV Theory and Strain Energy Density Function	322
7.6.7	Experimental Results and Fitting of Experimental Data	323
7.7	Tensors for Strain Rate	326
7.8	Nonlinear Viscoelasticity with Internal Variables	329
7.8.1	Generalized Maxwell Model	330
7.8.2	Evolution Equations	332
7.8.3	Generalized Maxwell Model for Harmonic Oscillations	334
7.8.4	Fitting Experimental Data for Human Aorta	335
7.9	Nonlinear Viscoelasticity with Multiple Integrals	335
	References	336
8	Vibrations of Rectangular Plates: Isotropic, Laminated and Sandwich Materials	338
8.1	Introduction	338
8.1.1	Literature Review	338
8.2	Linear Vibrations with Classical Plate Theory	339
8.2.1	Theoretical and Experimental Results	341
8.3	Nonlinear Vibrations with von Kármán Plate Theory	342
8.3.1	Boundary Conditions, Kinetic Energy, External Loads and Mode Expansion	343
8.3.2	Satisfaction of Boundary Conditions	345
8.3.3	Lagrange Equations of Motion	348
8.4	Numerical Results for Nonlinear Vibrations of an Isotropic Plate	349
8.4.1	Comparison of Numerical and Experimental Results	351
8.4.2	Inertial Coupling in the Equations of Motion	356
8.4.3	Effect of Added Masses	358
8.5	Nonlinear Vibrations of Laminated Plates with Third-Order Shear Deformation Theory and Rotary Inertia	358
8.5.1	Numerical Results for Nonlinear Vibrations of Laminated Plates	360
8.5.2	Nonlinear Vibrations of Laminated and Sandwich Plates with Free Edges	364
8.5.3	Numerical Results for Nonlinear Vibrations of Free-Edge Laminated Plates	368
8.5.4	Numerical and Experimental Results for Vibrations of Free-Edge Sandwich Plates	371
	References	377

9	Nonlinear Stability and Vibration of FGM Rectangular Plates under Static and Dynamic Loads	380
	9.1 Introduction	380
	9.2 Equations of Motion of FGM Plates by using Third-Order Shear Deformation Theory	381
	9.3 Numerical Results	386
	9.3.1 Buckling Load and Fundamental Natural Frequency	387
	9.3.2 Nonlinear Vibration by Transverse Harmonic Excitation	388
	9.3.3 Buckling and Post-buckling by In-Plane Static Load	389
	9.3.4 Nonlinear Dynamic Instability by In-Plane Harmonic Load	392
	References	400
10	Nonlinear Static and Dynamic Response of Rectangular Plates in Rubber and Biomaterial	402
	10.1 Introduction	402
	10.2 Nonlinear Model	402
	10.2.1 Strain Invariants and Principal Stretches	403
	10.2.2 Local Expansion of the Strain Energy Density Function	404
	10.3 Static and Dynamic Response of a Pressurized Rubber Plate	406
	10.3.1 Numerical Results for Static Analysis	408
	10.3.2 Nonlinear Vibration Analysis	410
	10.4 Dynamic Response of an Unstretched Rubber Plate	411
	10.5 Static Bending of a Pressurized Plate in Biological Material	413
	References	416
11	Vibrations of Isotropic and Laminated Composite Circular Cylindrical Shells	417
	11.1 Introduction	417
	11.1.1 Literature Review	418
	11.2 Linear Vibrations of Simply Supported, Isotropic Circular Cylindrical Shells	421
	11.2.1 Donnell's Theory of Shells	422
	11.2.2 Flügge-Lur'e-Byrne Theory of Shells	425
	11.3 Circular Cylindrical Shells Containing or Immersed in Still Fluid	428
	11.4 Rayleigh-Ritz Method for Linear Vibrations	432
	11.5 Nonlinear Vibrations of Empty and Fluid-Filled, Simply Supported, Isotropic Circular Cylindrical Shells	434
	11.5.1 Additional Terms to Satisfy the Boundary Conditions	437
	11.5.2 Fluid-Structure Interaction	439
	11.5.3 Lagrange Equations of Motion	440
	11.5.4 Traveling Wave Response	442
	11.6 Numerical and Experimental Results for Nonlinear Vibrations of Simply Supported Isotropic Shells	443
	11.6.1 Empty Shell	443
	11.6.2 Water-Filled Shell	447
	11.6.3 Discussion	461

11.7	Effect of Axial Load and Pressure on the Nonlinear Stability and Response of the Empty Isotropic Shell	461
11.8	Nonlinear Vibrations and Post-Buckling of Laminated Composite, Simply Supported Circular Cylindrical Shells	463
11.8.1	Numerical Results for Symmetric Laminate	466
11.8.2	Numerical Results for Non-Symmetric Laminate: Skew Modes	473
	References	480
12	Effect of Boundary Conditions on Large-Amplitude Vibrations of Circular Cylindrical Shells	484
12.1	Introduction	484
12.1.1	Literature Review	484
12.2	Theory	485
12.3	Numerical Results	487
12.3.1	Comparison with Numerical and Experimental Results Available for Empty Shells	489
	References	491
