

TEACHING COMPUTATIONAL CREATIVITY

Teaching Computational Creativity examines the new interdisciplinary pedagogies of today's coding-intensive interactive media and design curricula. Students, researchers, and faculty will find a comprehensive overview of educational practices pertaining to innovation fields such as digital media, 3D printing, agile development, physical computing, games, dance, collaboration, teacher education, and online learning. This volume fills an important gap in the literature on creative computation, as practitioners are rarely challenged to reflect on or share their teaching practices. How do we design effective inter-, multi-, cross-, and transdisciplinary pedagogy and curricula? Brought together here are essays on the pedagogies that produce the so-called *unicorns* – graduates who can code *and* create. Here, the intertwining of (what many consider mutually exclusive) artistic sensitivities and computational skills plays an essential role, calling forth a new kind of undergraduate curriculum attuned to the interweaving of skillsets and theoretical knowledge needed to create and innovate with ever-changing technologies.

Michael Filimowicz is senior lecturer in the School of Interactive Arts and Technology at Simon Fraser University. He is director of the Cinesonika festival and academic conference, and founder of 4th Foundation, a university spinout doing curriculum development in K-12 coding and technology skills. He has published across disciplines in journals such as *Organised Sound*, *Arts and Humanities in Higher Education*, *Leonardo*, *Empirical Musicology Review*, and *Semiotica*. His art has been exhibited internationally at venues such as SIGGRAPH, Re-New, Design Shanghai, ARTECH, Les Instants Vidéo, IDEAS, Kinsey Institute, and Art Currents, and published in monographs such as *Reframing Photography* and *Infinite Instances*. His portfolio site is <http://filimowi.cz>

Veronika Tzankova is a Ph.D. candidate in the School of Communication at Simon Fraser University (SFU), with a prior M.A. from the School of Interactive Arts and Technology, also at SFU. Her research is in the area of interactive technologies within contexts of social appropriation and democratic inclusiveness. She has published articles and book chapters with the *Parsons Journal for Information Mapping*, MIT Press, and Palgrave MacMillan Publishers. Her research has also been presented at various conferences such as the Association of Internet Researchers and ACS Crossroads.

2.6 Michael and team: <i>Out There In The Void</i>	68
5.1 Examples of projects developed in the class <i>Interfaces Físicas e Lógicas</i> . (a) A doll that responds to one’s social network status. (b) A drawing machine controlled	

by the musical notes played on an acoustic guitar. (c) A game controlled by gestures.	113
5.2 Students at work in the LIFE lab	114
5.3 Experiment in projection mapping. Software developed in the Processing environment is used to track the position of a red LED and use it as a reference to place a projected image	119
5.4 A color tag is used as a tracking reference for positioning a virtual image in an experiment using augmented reality, Processing language, and Ketai library	120
5.5 A virtual image is precisely positioned over a drawing on a person's skin. In this experiment, a pen drawing over tracing paper was positioned on the user's arm and used as a tracking reference	121
5.6 An augmented reality virtual tattoo created with the TattooAR application	122
5.7 One of the earlier experiments created by the student in the Physical Computing class	123
5.8 The second framing experiment was capable of digitally controlling the emission of spray paint	125
5.9 A servo motor attached to a spool that tensions a fishing line, used to move a can of spray paint	126
5.10 The fourth experiment, with the mechanism of actuation of the spray paint being raised by two motors	127
5.11 Tests made with spray paint	129
5.12 The installation in the LIFE lab	130
5.13 User testing with graffiti artist Amanda Vieira	130
5.14 The final presentation of the project at the LIFE lab	131
5.15 Color variations in glycemic index reading	132
5.16 Glycemic index result	133

5.17	The experiment made in cardboard with lens and LED light, to evaluate the possibility of reading color information using a smartphone’s camera	134
5.18	The 3D printed piece and using lens and artificial light, to perform a color reading using the camera device	135
5.19	3D printing tests, using a variety of materials and equipment	136
5.20	The app interface, where the patient can monitor his glucose readings	137
5.21	App interface destined to the health professionals, where the doctor can monitor the recent glycemic readings from the patient	138
6.1	(a) Movement session, (b) dancer working on a soft circuit, and (c) LED dress research project	144
6.2	Public performance projects from the course	145
6.3	(a) <i>Proximity</i> performance and (b) diagram of the inside of the robot of <i>Proximity</i>	154
6.4	<i>In the Shadow</i> performance	155
6.5	<i>Zwischenkörper</i> performance	157
7.1	Almquist and Lupton’s Venn diagram situating “use” between affordance and meaning	166
7.2	Codecademy’s coding workspace located in the main browser window, next to instruction, compiler at top right	167
7.3	CodeSkulptor IDE implemented in a stand-alone (separated from instructional content) browser window	168
7.4	Wireframe of online courseware with “sublated video”	169
7.5	High encouragement and very mild reprimand on Codecademy’s	172
7.6	The spatially distributed learning frames of online learning, with the expanded context shown in both print and e-book variations	179

x	<i>Figures</i>	
7.7	The mono-screen scene: university computer lab	181
7.8	A distributed design scene for online code learning	182
8.1	Image applying rule no. 8	201
8.2	Animating the image by applying rule no. 11	201
8.3	Molnar (2014) Neroli Wesley	203
8.4	25-Molnar Roses (2014) Jordi Pique	203
8.5	Examples of students’ works for the exercise “draw your name”	204

Tables

1.1 Pre- and post-survey questions on students’ self-efficacy of creating images/art with a computer	<i>page 42</i>
1.2 Pre- and post-survey questions on students’ self-efficacy of knowing how to make programmable media	42
5.1 Preliminary selection of projects and crossing of projects and criteria	117
5.2 Projects analyzed and learning processes	140
6.1 Weekly activities	151
A.1 High-level meta-pedagogical mapping of curriculum over a 2-year period	312

Notes on Contributors

Jussi Ängeslevä is involved in academia and the design industry, and conducts his individual experimental work, focusing on embodied interfaces, experiences, and services for the public. His work as Vice Creative Director at ART+COM media design studio consistently garners international recognition in exhibitions, installations, and awards. He is an honorary professor at the Berlin University of the Art teaching Digital Media Design and has been serving as a juror, chair, or advisor in various academic and design bodies such as D&AD, ARS Electronica, TEI, and SIGGRAPH. His design ethos is leveraging hardware, software, physical, and graphic design in the search for elegance in highly specific solutions, where the meaning of a work is inseparable from the medium communicating it.

Christine S. Bergeron has been the Director of Dance Programs and Initiatives at Texas A&M University since 2008. She has a B.A. in Dance Education from the University of Akron and an M.F.A. in Choreography and Performance from Florida State University. Currently, she is working toward her Ph.D. in Dance Science from the University of Wolverhampton where she is conducting research on Pilates and its effect on dance training and performance. Choreographically she is intrigued by time and space and how the two intersect. She began working with collaborator Jinsil Hwaryoung Seo in 2011 on interactive performance including motion capture and wearable technology. Christine's vision is not to sacrifice speed or complexity of the movement for the use of LED wearables but to find a way for the technology to "keep up" with the intricacies of dance. Choreographically, her work has been presented throughout the nation in Ohio, Florida, North Carolina, New York, California, Illinois, Texas, and Wisconsin, in Mexico.

João Bonelli is a designer working in Interaction Design and Physical Computing. He is a teacher and researcher in the Undergraduate Design Program at Pontifícia Universidade Católica do Rio de Janeiro – PUC-Rio, in Brazil. Bonelli has a master's degree from New York University's Interactive Telecommunications Program (ITP) and a Ph.D. in Design from PUC-Rio.

Channel TTwo (Trowbridge and Westbrook) has received a number of new media awards including a Rhizome Commission (2012), a Turbulence Commission (2011), and a Terminal Net Art Commission (2009). Channel TTwo's practice involves all aspects of research and production including conceptual development, aesthetics, visual/sound design, technology development, and coding. Channel TTwo is interested in luck, levels, and trespassing through the contexts of landscape, interactivity, and augmented reality. Projects intersect playful interface with critical undercurrents. Channel TTwo uses media, game platforms, communication design ephemera, and mobile apps to reveal social complexity, contradictions, cognitive dissonance, and coping mechanisms. More at: www.onchanneltwo.com

Angus Forbes is an assistant professor in the Department of Computer Science at University of Illinois at Chicago, where he leads the Creative Coding Research Group within the Electronic Visualization Laboratory. His work has appeared in a variety of journals and conference proceedings, both as a lead author and in collaboration, including IEEE Visualization, ACM Multimedia, IEEE BigData, USGS Geoinformatics, and ISEA, the International Symposium on Electronic Art, among others. His media arts practice often centers on the creation of interactive narratives that explore the cultural ramifications of the contemporary proliferation of interconnected data. His artwork, performances, and multimedia installations have been shown throughout the world at festivals, conferences, and galleries, including the Beall Center for Arts+Technology in Irvine, California, the eARTS new media festival in Shanghai, China, and the National Academy of Sciences in Washington, DC. Angus is also the chair of the IEEE VIS Arts Program, a forum created to explore relationships between arts practice, design methodologies, and visualization research. He was recently appointed in the Leonardo Editorial Board and will edit a series of special sections of Leonardo, the journal of the *International Society for the Arts, Sciences and Technology* in 2015. Author's website: <http://angusforbes.com>

Mark Guglielmetti currently lectures in UX design in the Department of Design at Monash University. In his practice-led research, Mark critically examines new languages of digital media to create and design unnatural

interfaces. Mark has presented and exhibited his research at numerous conferences and festivals including ACM Computers in Entertainment, ISEA, SIGGRAPH Asia, and Ars Electronica.

Andrew Hieronymi's recent work focuses on the sensation of movement in digital games. He creates interactive installations emphasizing the physical relationship between player(s) and interface during the act of playing. He has talked and exhibited internationally in art venues and media festivals and is an assistant professor of New Media at the School of Visual Arts at Penn State University.

Jon McCormack is a research professor within the Faculty of Information Technology who has worked with computer code as a medium for creative expression for more than 25 years. He has held research positions at the University of Sussex, Goldsmiths, University of London, and the Ars Electronica Future Lab. He is currently director of Monash University's sensiLab, a transdisciplinary research center that bridges computing with other disciplines.

Luke Meeken is an artist, educator, and researcher with a B.F.A. from Carnegie Mellon University, and an M.A.E. in Art Education from Virginia Commonwealth University. His research interests include digital media and programming in art education, early childhood art education, and the relationship between art education and the development of empathy. Luke has developed and taught game-making, creative coding, and green-screen video courses for elementary and secondary learners, and has worked with students in Prague, Czech Republic, and Moscow, Russia. Luke is a founding member of Voke, an online platform for visualized art education research by emerging practitioners.

Dimitri Nieuwenhuizen (LUST). LUST is a multidisciplinary graphic design practice established in 1996 by Jeroen Barendse, Thomas Castro, and Dimitri Nieuwenhuizen, based in The Hague, Netherlands. LUST works in a broad spectrum of media including traditional print work and book design, abstract cartography and data visualizations, new media and interactive installations, and architectural graphics. Moreover, LUST is deeply interested in exploring new pathways for design at the cutting edge where new media and information technologies, architecture, and urban systems and graphic design overlap. This fascination led to establishing LUSTlab in the summer of 2010. LUSTlab is more than a new form of Research & Development. LUSTlab goes further than observing, inventing, and producing, by means of forming a platform where knowledge, issues, and

ideologies can be shared. LUSTlab researches, generates hypotheses, and makes unstable media stable again. The future of digital media lies in the design of its use: humanizing the unhuman, bringing the internet down to earth, and finding the missing link between the digital and the physical. The outcomes vary from (strategic) visions to new communication tools, man-machine installations, and physical products using digital content.

Luiza Novaes is a designer working in the areas of collaborative design, interactive media, and visual communication. She is a full-time assistant professor and researcher in the graduate and undergraduate programs in Design at Pontifícia Universidade Católica do Rio de Janeiro – PUC-Rio, in Brazil. She has a Ph.D. in Design from PUC-Rio and an M.F.A. in Photography and Related Media from SVA – School of Visual Arts, New York, USA.

Nancy Paterson is associate professor at OCAD University in Toronto. She has been actively engaged with the internet since 1982 at UTZOO (University of Toronto) and since that early date she has utilized the internet in many media projects. Her background in interactive net art and media art design led to academic research in protocols and policy. Her projects can be found at: www.vacuumwoman.com and academic papers at: http://papers.ssrn.com/sol3/cf_dev/AbsByAuth.cfm?per_id=2016282

Dr. Ryan M. Patton is an assistant professor of Art Education at Virginia Commonwealth University. Dr. Patton taught high school art in the South Bronx and animation and game design with the Smithsonian Summer Associates. As part of his research in new media art education, Dr. Patton cocreated an augmented reality game called CitySneak which explores disrupting conventions of public space and surveillance with mobile devices. Patton also designed and produced a set of modular electronic switches intended for youth to design video game controllers. His academic writing has appeared in several publications including *Studies in Art Education*, *Journal of Social Theory in Art Education*, and *Visual Arts Research*. Dr. Patton's current research interests include technology in art education, new media art, games-based pedagogy, physical computing, big data & data visualization, visual culture, socially engaged art practices, and urban education.

Daniel Sauter is an artist who creates installations and visualizations dealing with the cultural and social implications of emerging technologies. His research is driven by a curiosity about how the computational regime transforms geopolitics, urban spaces, and the human body. Daniel is an Associate Professor in the School of Art, Media, and Technology at Parsons

School of Design, and Co-Director of the the New School's Integrative Ph.D. Fellowship Program.

Jinsil Hwaryoung Seo is an interactive artist/researcher focusing on aesthetics of interactive experience. Currently she is an assistant professor in the Department of Visualization at the College of Architecture and a faculty fellow in the Center for Health Systems & Design at Texas A&M University. Seo received a Ph.D. in Interactive Art and Technology from Simon Fraser University in Canada and an M.F.A. in Computer Arts from School of Visual Arts (SVA). With interdisciplinary, interactive art practice, Seo investigates the intersection between body, nature, and technology. Seo has been fascinated by the aesthetic qualities of human experience, the relationships that emerge through interactions within artworks, and the underlying beauty and pattern inherent in nature. Her current research concentrates on designing for tangible and kinetic aesthetics in the contexts of performance, child development, and health. Seo has chosen interactive art for her creative practice and research in particular as it encourages immersive and embodied relationship within a work of art.

Scott Snibbe is a pioneering digital artist and entrepreneur whose work includes apps, video, and interactive installations. His art is in the permanent collections of the Whitney Museum of American Art and the Museum of Modern Art (MoMA), which in 2014 acquired his collaboration with Björk, the Biophilia App Album, as the first app in its collection. His work has been incorporated into concert tours, Olympics, museums, airports, and other major public spaces and events, and he has collaborated on interactive projects with musicians and filmmakers including Philip Glass, Beck, and James Cameron. He has received the Webby and Ars Electronica awards, and grants from the National Science Foundation, the Ford Foundation, the National Endowment for the Arts, and the Rockefeller Foundation. Snibbe currently serves as CEO of social music video startup Eyegroove, and has founded several other startups since 2000. In the 1990s, Snibbe was a staff researcher at Interval Research, performing basic research in haptics, computer vision, and interactive cinema; and was one of the codevelopers of the digital compositing software After Effects, acquired by Adobe Systems. He has held teaching and research positions at NYU's Courant Institute of Mathematics, The San Francisco Art Institute, California Institute of the Arts, and U.C. Berkeley. Snibbe currently serves as an advisor to The Institute for the Future and the Sundance Institute. He has published numerous articles and academic papers, is an inventor on more than 20 patents, and a regular worldwide public speaker.

Orkan Telhan is interdisciplinary artist, designer, and researcher whose investigations focus on the design of interrogative objects, interfaces, and media, engaging with critical issues in social, cultural, and environmental responsibility. Telhan is assistant professor of Fine Arts – Emerging Design Practices at University of Pennsylvania, School of Design. He holds a Ph.D. in Design and Computation from MIT's Department of Architecture. He was part of the Sociable Media Group at the MIT Media Laboratory and the Mobile Experience Lab at the MIT Design Laboratory. He studied Media Arts at the State University of New York at Buffalo and theories of media and representation, visual studies, and graphic design at Bilkent University, Ankara. Telhan's individual and collaborative work has been exhibited in venues including the 13th Istanbul Biennial, 1st Istanbul Design Biennial, Ars Electronica, ISEA, LABoral, Archilab, Architectural Association, the Architectural League of New York, MIT Museum, Museum of Contemporary Art Detroit, and the New Museum of Contemporary Art, New York.

Brad Tober is assistant professor of design and visual analytics at Boston University, and is a designer, educator, and researcher whose work explores the potential of emerging code-based and interactive visual communication technologies, with the objective of developing applications of them to design practice and pedagogy. His practice-led research entity, the Experimental Interface Lab, is characterized by a speculative approach to design (a manifestation of pure research) that recognizes that forms of and methodologies for contemporary practice that span design and technology are best developed through fundamentally flexible and exploratory processes. Brad holds an M.Des. from York University, a B.F.A. in graphic design from the Savannah College of Art and Design, and a B.A. in mathematics from the University at Buffalo.

Adam Trowbridge [Channel TWo] is currently an assistant professor in the College of Computing and Digital Media, School of Design, DePaul University, Chicago, IL. He is currently researching cybersecurity design, biobehavioral interface design, mobile health, programming pedagogy for designers, and geolocated augmented reality. He received an M.F.A. in Electronic Visualization from the University of Illinois at Chicago, Chicago, IL (2008) and a B.F.A. in Art (sculpture and painting) from the University of Central Florida, Orlando, FL (1996).

Jessica Westbrook [Channel TWo] is currently an associate professor in the College of Computing and Digital Media, School of Design, DePaul

University, Chicago, IL. She teaches research and studio courses in graphic, interaction, and game design. Westbrook uses design to negotiate and organize the joys and struggles of information and understanding. Her research involves visual and language systems, complexity, and contradictions. She received an M.F.A. in photography from Temple University, Tyler School of Art, Philadelphia, PA (1998) and a B.F.A. in art (photography) from the University of Central Florida, Orlando, FL (1996).

Acknowledgments

We would like to acknowledge and thank the Institute for the Study of Teaching and Learning in the Disciplines (ISTLD) at Simon Fraser University for five years of generous grants and support for our research into new pedagogies which we have applied in the School of Interactive Arts and Technology (SIAT). This has been a vital base for our publications and presentations in the theories and methods of teaching interactive media and design.

We wish to thank Monash University and in particular Professor Darrell Evans and Adrian Devey supporting the *Creative Coding* MOOC. We would also like to thank Professor Maria Garcia de la Banda, Meghan Deacon, and Linda Kalejs for their generous assistance during the development phase of the project. Finally, we would like to express our deep appreciation to Dr. Indae Hwang for his input and collaboration on the MOOC.

We would like to thank the editors of this volume for their extensive and incisive feedback.

We acknowledge TOP (Tier One Program) grant at Texas A&M University, Tiffany Sanchez, research assistant, Visualization Department at College of Architecture, and Dance Program in Department of Health and Kinesiology at College of Education and Human Development.
