

Index

- achievable SINR, 148
- ALOHA, 44
 - equilibrium, 49
 - max throughput, 47
 - pure ALOHA, 45
 - slotted ALOHA, 46
- association, 199, 221
 - cell breathing, 222
 - cell range extension, 223
 - load balancing, 221
 - network selection, 200
- average power consumption
 - slotted ALOHA, 249

- BER, 30
- best effort, 23
- bit-map protocol, 58
- blocking probability, 109
- BS density, 253
 - uplink, 72

- capacity region
 - downlink, 74
 - duality, 75
 - scheduling, 76
 - two-user uplink, 73
- cellular networks
 - energy efficiency, 250
- cellular systems
 - best-effort data services, 110
 - cluster size, 102
 - directional antennas, 120
 - orthogonal multiple access, 95
 - outage-based capacity, 114
 - reuse distance, 100
 - static channel allocation, 97
 - traffic-based capacity, 106
- channel borrowing, 185
- CoMP, 277
 - coordinated beamforming, 278
 - coordinated scheduling, 278
 - joint transmission, 278

- contention based, 28
- contention free, 28, 32
- cost
 - base station, 295
 - subscriber, 288
- cost model, 287, 291
- CRA, 55
- CSMA, 50
 - 1-persistent CSMA, 50
 - CSMA/CA, 52, 53
 - CSMA/CD, 52
 - detection delay, 51
 - non-persistent CSMA, 50
 - p-persistent CSMA, 51

- DCH, 62
- delay, 29
- directional antennas, 120
- DS-CDMA systems, 122
 - downlink capacity, 133
 - interference factor, 218
 - multi-service CDMA, 134
 - sectorization, 129
 - traffic-based capacity, 131
 - uplink multi-cell capacity, 127
 - uplink single-cell capacity, 126
 - voice activity monitoring, 129

- economy
 - access, 286
- EE and SE tradeoff
 - interference, 244
- energy consumption, 228
- energy efficiency, 241
 - channel gain, 233
- data rate
 - circuit power, 233
- energy consumption, 229
- MIMO, 236
- OFDM, 236
- signal bandwidth, 233

- energy-efficient
 - network deployment, 250
 - energy-efficient MAC, 245
 - energy-efficient power allocation, 238
 - energy-efficient scheduling, 234
 - energy-efficient transmission, 381
 - close form, 239
 - frequency selective channels, 235
 - necessary and sufficient condition, 237
 - no circuit power, 230
 - optimal data rate, 233
 - energy minimization, 229
 - energy efficiency maximization, 229
 - engineering value, 291
 - equilibrium
 - interference, 156
 - expected throughput, 77
 - exposed node problem, 53
-
- fading margin, 204, 216
 - FDMA, 32
 - frequency hopping, 186
-
- guard channels, 209
-
- handover, 199
 - frequency of handover, 203
 - handover failure probability, 202
 - hard handover, 201
 - horizontal handover, 200
 - MAHO, 201, 208
 - soft handover, 201, 213
 - vertical handover, 200
 - heterogeneous networks, 192, 223
 - cell range extension, 223
 - closed access, 193
 - closed subscriber group, 193
 - energy efficient, 254
 - open access, 193
 - hidden node problem, 52
 - hybrid access, 38
 - hysteresis, 206, 208
