

Contents

<i>Preface</i>	<i>page</i> xiii
<i>Notation</i>	xv
1 Free Fields in Vacuum	1
1.1 Generalities	1
1.2 Scalar Field	3
1.3 Dirac Field	6
1.4 Vector Field	8
1.5 Rarita–Schwinger Field	10
1.6 General Fields	12
Problems	14
References	19
2 Spontaneous Symmetry Breaking	21
2.1 Linear σ -Models	21
2.2 Goldstone Theorem (First Proof)	26
2.3 Goldstone Theorem (Second Proof)	30
2.4 Other Matrix Elements of Current	34
2.5 Linear σ -Model Revisited	38
2.6 Non-Linear σ -Model	40
2.7 Effective Field Theories	42
2.8 Approximate Symmetry	45
Problem	46
References	48
3 Chiral Perturbation Theory	49
3.1 Symmetries of Massless QCD	51
3.2 Spontaneous Symmetry Breaking	53
3.3 Transformation Rule	55
3.4 Effective Lagrangian	57
3.5 Power Counting	59
3.6 Approximate Chiral Symmetry	62
3.7 Results from Approximate Symmetry	64
3.8 External Fields	68

x	<i>Contents</i>	
3.9	Fourth Order Effective Lagrangian	71
3.10	One-Loop Results (Pions Only)	75
3.11	Non-Goldstone Fields	80
3.12	Nucleon Current Correlation Function	84
3.13	Meson Current Correlation Functions	87
	Problems	91
	References	93
4	Thermal Propagators	94
4.1	Time Path	95
4.2	Scalar Propagator	98
4.3	Dirac Propagator	103
4.4	Time-Ordered Spectral Representation	106
4.5	Retarded Spectral Representation	114
	Problems	115
	References	117
5	Thermal Perturbation Theory	118
5.1	Matrix Structure	118
5.2	Diagonalisation	123
5.3	One-Loop Self-Energy (Scalar Fields)	126
5.4	One-Loop Self-Energy (General Fields)	131
	Problems	134
	References	136
6	Thermal Parameters	137
6.1	Quark Condensate at Finite Temperature	138
6.2	Pion at Non-Zero Temperature	138
6.3	Nucleon at Finite Temperature	140
6.4	ρ at Finite Temperature	142
6.5	Nuclear Matter	147
6.6	Comments	151
	Problem	152
	References	153
7	Two-Loop Results	154
7.1	Quark Condensate	154
7.2	Pion Decay Rate	159
7.3	Pion Mass and Coupling	163
	Problems	170
	References	172
8	Heavy Ion Collisions	173
8.1	Dilepton Production	174

<i>Contents</i>		xi
8.2	Analytic Structure	179
8.3	Evaluation	182
8.4	Comments	185
	Problems	185
	References	188
9	Non-Equilibrium Processes	189
9.1	Relativistic Hydrodynamics	190
9.2	Phenomenological Energy-Momentum Tensor	192
9.3	Non-Equilibrium Statistical Theory	194
9.4	Statistical Energy-Momentum Tensor	197
9.5	Transport Coefficients	200
9.6	Evaluation	203
	Problem	208
	References	210
	Appendix A: General Fields	212
	Appendix B: Global Symmetries	215
	Appendix C: Exponential Operator	220
	Appendix D: Propagator at Origin of Coordinates	223
	Appendix E: Reaction Rates in Vacuum and Medium	227
	Appendix F: Coupling Constants	233
	Appendix G: Imaginary Time Method	238
	Appendix H: Quark Condensate from Partition Function	241
	Appendix I: Quark Condensate from Density Expansion	244
	<i>Index</i>	246
