<i>Preface</i>	<i>page xi</i>
Part I Overview	1
<b>1 Why Analytical Mechanics?</b>	3
1.1 Broad Concepts	3
1.2 Energy for Conservative Forces	12
1.3 Looking Ahead	17
Exercises	17
<b>2 Ways of Looking at a Pendulum</b>	19
2.1 The Pendulum	19
2.2 Newton's Equations in Cartesian Coordinates	20
2.3 Newton's Equations in Polar Coordinates	23
2.4 Energy Considerations	26
2.5 Momentum Considerations	30
2.6 Action Considerations	33
2.7 Summary	36
Exercises	38
Part II Equations of Motion	39
<b>3 Constraints and d'Alembert's Principle</b>	41
3.1 Static Equilibrium	41
3.2 d'Alembert's Principle	49
3.3 Degrees of Freedom	53
3.4 Lagrange Multipliers	56
Exercises	59

<b>4 Lagrangian Mechanics</b>	62
4.1 Example: Free Particle in Polar Coordinates	63
4.2 Lagrange's Equations	66
4.3 Hamilton's Principle	77
Exercises	80
<b>5 Samples from Lagrangian Mechanics</b>	83
5.1 Constants of the Motion	84
5.2 The Pendulum on a Rolling Cart	86
5.3 Linear Acceleration	91
5.4 Ambiguity in the Momentum	94
5.5 Rotation	96
5.6 Magnetic Fields Forever	102
5.7 Summary	105
Exercises	106
<b>6 Hamiltonian Mechanics</b>	108
6.1 Restricted Case: Nonmoving Coordinate System	108
6.2 Moving Coordinate Systems	119
6.3 Phase Space: The Final Frontier	127
Exercises	129
Part III Methods of Solution	131
<b>7 Hamilton–Jacobi Theory</b>	133
7.1 The Harmonic Oscillator	135
7.2 Canonical Transformations	138
7.3 Who Generates the Generating Functions?	144
7.4 Time-Dependent Canonical Transformations	149
7.5 Summary	151
Exercises	152
<b>8 Action–Angle Variables</b>	154
8.1 Periodic Motion	154
8.2 Adiabatic Invariants	167
Exercises	174
<b>9 More Applications of Analytical Mechanics</b>	176
9.1 Projectile	176
9.2 Comet	181

Contents	ix
9.3 Masses Connected by Springs	187
9.4 Double Pendulum	196
Exercises	199
<i>Further Reading</i>	201
<i>Index</i>	203
