## Subject Index

- Activation energy barrier, 60, 62–64, 100, 136, 138, 171
- Activation volume, 63
- Advanced first-order second-moment (AFOSM) method, 194, 197
- Alumina ceramics, 101, 159
- Alumina glass, 156
- Apparent fracture energy, 107, 108, 112
- Apparent fracture toughness, 102, 112
- Arrhenius (thermal) factor, 60, 65, 136
- Asphalt mixtures
  - three point bend tests, 165
  - direct tension tests, 165
  - strength histograms, 166
- Asymptotic size effects
  - dimensional analysis, 47, 261
  - elastic materials, 47
  - elasto-plastic materials, 47
  - intermediate asymptote, 262
  - LEFM – *see* Linear elastic fracture mechanics, dimensional analysis of size effect
  - metallic structures, 48
  - small-size asymptotic properties, 49, 50, 264
- Atomic lattice, 59, 60
- Autocorrelation length, 23, 56, 84, 97, 119, 120, 143, 236, 243
- Basquin law – *see* S-N curve
- Berea sandstone, 113, 114
- Bone, cortical
  - lifetime histograms, 159
- Bimaterial corner
  - auxiliary small-scale crack problem, 230
  - bimaterial interface, 229, 230, 232, 234, 236
  - complex potential method, 229, 234
  - dimensional analysis, 229, 230
  - equivalent interfacial crack, 230
  - fracture process zone – *see* Fracture process zone, at bimaterial corner
  - Mellin transform, 229
  - near-corner stress field, 229
  - stress intensity factor, 229, 230
- Bimaterial hybrid structures, 228
- butt joints, 228
- double-lap hybrid joints, 228
- scarf joints, 228
- size effect tests, 232
- Boundary layer, 139
- Boundary value problem, elasticity, 257, 261, 264, 266
- Breakdown model, gate dielectrics
  - dielectric breakdown model (DBM), 242, 246, 249, 250
  - electron-trapping defect density, 246
  - microscopic model, 246–249, 251
  - diffusion limited aggregation model, 246
  - Eden model, 246
  - percolation model, 242, 244, 246, 249, 252, 254
  - defect production rate, power-law scaling, 249, 250
  - fractal dimension, 246, 250
- Breakdown probability, gate dielectrics, 242
  - potential breakdown cell, 242, 243
  - series coupling, 243
  - parallel coupling, 243
  - resistor, 242–244
  - capacitor, 242, 244
  - quantum tunneling, 244
  - subcell, 244–246, 250
  - subcell breakdown probability, 248
  - power-law tail, 246, 247
  - charge detrapping, 247
  - lifetime distribution, 251, 252
  - Weibull modulus, 249, 251, 252, 254
  - mean breakdown lifetime, size effect, 255, 256
  - median breakdown lifetime, 254
  - weakest-link model, 242, 243, 256
- Breakdown voltage, 243
  - linearly ramped voltage, 248
  - probability distribution, 248
  - constant voltage stress, 240
  - unipolar AC voltage stress, 241
- Brittle bundle, 74
  - Daniels' recursive equation, 76
  - convergence, Gaussian distribution, 76, 77

- Brittle failures, 2  
 and Weibull distribution, 20
- Brittleness number, 18
- Buckingham theorem – *see* Vashy-Buckingham  $\Pi$  theorem
- cdf, or cumulative distribution function – *see*  
 Representative volume element, cumulative  
 distribution functions of strength, creep  
 lifetime, fatigue lifetime, and residual strength
- Central limit theorem, proof, 30  
 characteristic function, 30
- Ceramics  
 lifetime histograms, 157, 159  
 S-N curve, 136  
 size effect tests, 53  
 static fatigue tests, 106  
 strength histograms, 155, 156, 159  
 stress-life curve, 135
- Chain model – *see* finite weakest-link model
- Charles-Evans law, 100, 123, 178
- Cohesive crack model, 7, 37  
 cohesive law, 38, 40, 265–267  
 smooth closure, 39  
 material characteristic length – *see* Irwin's  
 material characteristic length
- Cohesive stress profile, 2, 51
- Composites  
 lifetime histograms, 157  
 size effect tests, 53  
 strength histograms, 155
- Concrete  
 size effect tests, 7, 53, 57, 215  
 fatigue, 113
- Cornell reliability index, 194  
 size dependence, 196  
 failure probability, 195
- Crack length effect, 213
- Crack band model, 8, 40  
 and microplane model, 41  
 and spring-crack band model, 42  
 fracture propagation, 43  
 and stochastic simulation, 43  
 mesh dependence, 43
- Creep lifetime distribution, 122  
 failure probability distribution of one RVE, 124  
 logarithmic transformation, 125  
 equivalent number of RVEs for creep lifetime,  
 127  
 Weibull modulus, 127, 158
- Cyclic fatigue  
 amplitude of nominal stress, 65, 128  
 critical energy dissipation rate, 109, 112  
 dimensional analysis, 110  
 load-deformation hysteresis loop, 110  
 microplane model, 117  
 multiscale transition, 108  
 Paris law, 89, 97, 101, 111–113, 118, 128, 160  
 power-law exponent, 101, 111, 112  
 self-similarity, 110  
 size effect, 101, 112  
 size effect experiments on Berea sandstone, 114  
 size effect experiments on concrete, 113  
 stress ratio, 65, 127  
 transitional size, 112, 113
- Daniels' bundle model – *see* Brittle bundle
- Degradation of residual strength, 180
- Dental ceramics  
 strength histograms, 156
- Design codes, 9, 193, 200
- Digital image correlation (DIC), 114
- Dielectric breakdown  
 breakdown lifetime, 240  
 hard breakdown, 239  
 soft breakdown, 239
- Dimensional analysis of size effect – *see*  
 Asymptotic size effects, dimensional analysis
- Discrete computational model  
 distinct element model, 45  
 lattice discrete particle model (LDPM), 46, 118  
 lattice model, 45  
 particle discrete model, 45
- Disordered system of nanoparticles, 60
- Distributed fracture, 40
- Ductile failures, 2, 20  
 and Central Limit Theorem, 20  
 and Gaussian distribution, 20
- Energy flux into moving FPZ – *see* J-integral
- Equivalent number of RVEs – *see* Representative  
 volume element, equivalent number
- Equivalent oxide thickness (EOT), 240
- Extreme value statistics, 6  
 asymptotic distribution, 28  
 domain of attraction, 29  
 Fisher-Tippett-Gnedenko theorem, 29  
 Fréchet distribution, 29  
 Gumbel distribution, 29, 120, 121, 198, 202  
 stability postulate, 28, 176
- Failure probability, 1, 9, 11, 21, 25, 29, 32, 34, 56,  
 119, 141, 171, 175, 193  
 and Freudenthal reliability integral, 33, 194  
 nanoscale structures, 59, 60, 64, 69
- Failure state, 193, 194
- Fatigue lifetime distribution, 127  
 failure probability distribution of one RVE, 128  
 equivalent number of RVEs for fatigue lifetime,  
 129
- Fatigue strength  
 nanoscale structures, 65, 66

- fiber-bundle model, 88
- Fiber-bundle model, parallel coupling, 71, 73, 245, 248
  - load sharing rule, 73
  - asymptotic behavior, monotonic strength of large bundle, 87
  - asymptotic behavior, fatigue strength of large bundle, 91
- Fiber composites – *see* Composites
- Fictitious crack model, 7, 38 – *see also* Cohesive crack model
- Finite weakest-link model, 8, 119
  - and chain model, 73
  - for creep lifetime, 125
  - for fatigue lifetime, 128
  - for dielectric breakdown – *see* Breakdown probability, weakest-link model
  - with pseudo-random placing of RVEs, 144
  - with centroid Voronoi tessellation, 145
  - with Taylor expansion method, 146
  - with nonlocal boundary layer model, 141
  - for residual strength, 182
  - median strength, size effect, 199
  - strength variance, size effect, 195
  - generalized model, structures with a V-notch, 220
  - generalized model, bimaterial structures, 232
- Fokker-Planck equation, 67
- First-Order Reliability Method (FORM), 10
- Fisher-Tippett-Gnedenko theorem, 29
- FPZ – *see* Fracture process zone
- Fracture energy, 8, 18, 35, 39, 40, 42, 43, 52, 103, 107, 124, 136, 214, 224, 259
  - apparent, 107, 108, 112
- Fracture kinetics, 97, 100
- Fracture process zone (FPZ), 2
  - and material characteristic length, 13, 39
  - in nanoscale structures, 61
  - and chain model, 71
  - and fiber-bundle model, 71
  - of static fatigue, 103, 107
  - and active nanocracks, 104, 109
  - of cyclic fatigue, 108, 109, 112, 114, 118
  - at bimaterial corner, 228, 230
- Fracture toughness, 36, 39, 261
  - apparent, 102, 112
- Freudenthal reliability integral, 33, 194
  
- Gauss (or Gaussian) distribution, 20
- Gate dielectrics – *see also* Breakdown model
- Geometrical similarity and polar affinity
  - transformation, 12, 257
- Gibbs free energy, 35
- Glass
  - Residual strength, 188
  - Static fatigue, 106
- Strength histograms, 184
- Gumbel Distribution – *see* Extreme value statistics, Gumbel distribution
  
- Hall-Petch formula, 56, 267
- Hasofer-Lind index, 197
  - Gaussian variables, equivalent Gaussian variables, 197, 198
  - Lagrange multiplier method, 197
  - failure probability, 197
- Helmholtz free energy, 35
- Hierarchical statistical model, 92
  - static strength, 92
  - fatigue strength, 97
  - grafted Gauss-Weibull distribution, 96, 98
  - grafting probability, 96
  - statistical correlation, 97
  - renormalization group transformations, 97
- High- $k$  gate dielectrics, 239
- High strength concretes, 113
- Histograms of creep lifetime, optimum fits of Kevlar-49 fiber composites, 157
  - MgO-doped hot pressed silicon nitride (HPSN), 158
  - alumina oxide ( $\text{Al}_2\text{O}_3$ ), 158
- Histograms of fatigue lifetime, optimum fits of structural alumina ceramics, 159
  - dental ceramics composites, 159
  - cortical bones, 159
- Histograms of residual strength, optimum fits of borosilicate glass, 184
  - unidirectional glass/epoxy composites, 186
  - soda-lime silicate glasses, 188
- Histogram testing method, 170
  
- Ice (sea ice), 3
- Interatomic bond, 60
- Interatomic potential, 59
  - Lennard-Jones potential, 60
  - Morse potential, 60, 101
  - Stillinger-Weber potential, 60
  - Tersoff potential, 60
- Intermediate asymptote of size effect, 262
  
- J-integral, 18, 37, 39, 259
- Joint probability theorem, 23, 28, 32, 73, 83, 125, 182
  
- Kinetics of fracture, nanoscale, 102
- Kramers' formula, 64
  
- Levenberg-Marquardt algorithm, 157
- Limestone, 53
- Linear elastic fracture mechanics (LEFM), 2, 6, 7, 13, 35, 62
  - Irwin's relation, 36

- Linear elastic fracture mechanics (LEFM) (*cont.*)  
 mode I, mode II, mode III stress intensity factors, 36  
 stress intensity factor, V-notch, 219, 220  
 asymptotic near-tip stress, strain and displacement fields, 36, 219, 229  
 dimensional analysis of size effect, 48  
 equivalent linear elastic fracture mechanics, 8, 18, 52, 63, 123, 212, 218, 264  
 stress singularities, bimaterial corner, 229  
 stress intensity factor, bimaterial corner, 229  
 Williams solution, 219  
 power-law scaling – *see* Power-law scaling, linear elastic fracture mechanics
- Load factor (safety), 9, 193
- Localization instability, 42
- Lognormal distribution, 20, 125, 126, 129, 198, 202
- Malpasset arch dam, 202  
 two-dimensional arch model, 203  
 engineering beam theory, 204  
 finite weakest-link model, 204  
 Castigliano's theorem, 204  
 Cornell reliability index, 204  
 Hasofer-Lind reliability index, 207  
 central safety factor, 208  
 nominal safety factor, 209
- Material characteristic length  
 absence of, power-law scaling, 13  
 Irwin's material characteristic length, 39  
 and weakest-link model, 25  
 crack band width (crack band model), 41  
 and nonlocal damage model, 44  
 and nonlocal gradient model, 45  
 and discrete lattice and particle models, 46  
 effective size of FPZ, 53, 107  
 effective size of static fatigue FPZ, 108  
 effective size of cyclic FPZ, 112  
 statistical characteristic length, Type-1 size effect, 211  
 boundary layer depth, 15, 56, 211
- Mean size effect of finite weakest-link model  
 structural strength, 129, 142, 162, 222, 233  
 asymptotic matching, 132, 134, 162, 163, 222, 233  
 creep lifetime, 133  
 fatigue lifetime, 133  
 breakdown lifetime, gate dielectrics, 255
- Mean-value first-order second-moment (MVFOSM) method, 194
- Metal-oxide-semiconductor field effect transistor (MOSFET), 239
- Mesh dependence, 43
- Microplane model, 41, 117
- Midpoint position method, 166
- Modulus of rupture, 15, 56, 141, 168, 175, 211
- Molecular dynamics, 59
- Multiscale transition of cdf tail – *see* Power-law tail distribution, hierarchical statistical model
- Nanoscale crack  
 quasi-stationarity, 60, 64  
 thermally-activated process, 63, 136  
 metastable states, 63, 64  
 crack healing, 63  
 equivalent linear elastic fracture mechanics, 63  
 fracture kinetics, 102  
 net energy dissipation rate of nanocrack propagation, 104
- Nonlocal damage model, 44, 84
- Nonlocal integral approach, 8  
 averaging neighborhood (nonlocal influence zone), 44, 140  
 structure boundary, 44, 140  
 weighting function, 44, 140  
 probabilistic modeling, 139  
 spurious localization, 139  
 spurious mesh sensitivity, 140
- Nonlocal gradient model, 8, 45  
 explicit gradient model, 45  
 implicit gradient model, 45
- Nonlocal Weibull theory, 56
- Normal distribution – *see* Gauss distribution
- Numerical simulation  
 of beams with a V-notch, 223  
 damage-plasticity model, 223  
 load-deflection curves, 224, 236  
 fracture process zone, 224  
 size effect curves, 225, 236  
 of bimaterial fracture, 234
