Preface ix
Acknowledgments xi

1	Introduction to Digital Image Processing	1		
1.1	Digital Images	1		
1.2	Image Quality	2		
1.3	Basic Image Operations	4		
1.3.1	Gray Level Transformations	4		
1.3.2	Multi-image Operations	5		
1.3.3	Geometric Operations	7		
1.3.4	Filters	8		
1.3.4.1	Linear Filters	8		
1.3.4.2	Nonlinear Filters	13		
1.3.5	Multi-scale Image Processing	13		
2	Radiography	15		
2.1	Introduction	15		
2.2	X-rays	15		
2.2.1	Bremsstrahlung	15		
2.2.2	Characteristic Radiation	15		
2.3	Interaction with Matter	17		
2.3.1	Interaction of Photons with Matter	17		
2.3.2	Interaction of an X-ray Beam with Tissue	17		
2.4	X-ray Detectors	18		
2.4.1	Screen–Film Detector	19		
2.4.1.1	Screen	19		
2.4.1.2	Film	19		
2.4.2	Image Intensifier	20		
2.4.3	Detectors for Digital Radiography	20		
2.4.3.1	Storage Phosphors	20		
2.4.3.2	Active Matrix Flat Panel Detectors	21		
2.4.3.3	Photon Counting	23		
2.5	Image Quality	23		
2.5.1	Resolution	23		
2.5.2	Contrast	23		
2.5.3	Noise	23		
2.5.4	Artifacts	24		
2.6	Equipment	24		
2.7	Clinical Use	26		
2.8	Biological Effects and Safety	28		
2.9	Future Expectations	31		
3	X-ray Computed Tomography	33		
3.1	Introduction	33		
3.2	X-ray Detectors in CT	35		
3.2.1	Energy Integrating Detectors	35		
3.2.2	Photon Counting Detectors	35		
3.3	Imaging	36		
3.3.1	Data Acquisition	36		
3.3.1.1	Projection and Radon Transform	36		
3.3.1.2	Sampling	37		
3.3.2	2D Image Reconstruction	38		
3.3.2.1	Backprojection	38		
3.3.2.2	Projection Theorem	39		
3.3.2.3	Direct Fourier Reconstruction	40		
3.3.2.4	Filtered Backprojection (FBP)	40		
3.3.2.5	Fan-beam Filtered Backprojection	42		
3.3.3	Imaging in Three Dimensions	44		
3.3.3.1	Single-slice CT	44		
3.3.3.2	Multi-slice CT	45		
3.3.3.3	Volumetric CT	46		
3.4	Dynamic CT	49		
3.4.1	Cardiac CT	49		
3.4.2	Perfusion CT	50		
3.5	Multi-energy CT	51		
3.6	Image Quality	55		
3.6.1	Resolution	55		
3.6.2	Noise	56		
3.6.3	Contrast	56		
3.6.4	Image Artifacts	56		
3.6.4.1	Undersampling	56		
3.6.4.2	Beam Hardening	56		
3.6.4.3	Scatter	57		
3.6.4.4	Nonlinear Partial Volume Effect	57		
3.6.4.5	Motion	57		
3.6.4.6	Helical Interpolation	58		
3.6.4.7	System Inaccuracies	58		
3.7	Equipment	58		
3.7.1	Tomosynthesis	58		
3.7.2	General-purpose Scanners	58		
3.7.3	Dedicated Scanners	60		
3.7.3.1	Oral and Maxillofacial CT	61		
3.7.3.2	Interventional CT	61		

Contents

- 3.7.3.3 Breast CT 61
 - 3.7.4 Multiple X-ray Tubes 61
 - 3.7.5 Electron Beam Tomography (EBT) 62
 - 3.8 Clinical Use 63
 - 3.9 Biological Effects and Safety 64
 - 3.10 Future Expectations 67
 - 4 Magnetic Resonance Imaging 71**
 - 4.1 Introduction 71
 - 4.2 External Magnetic Field 71
 - 4.2.1 Angular Momenta and Magnetic Moments 71
 - 4.2.1.1 A Qualitative Description 71
 - 4.2.1.2 Classical Description 72
 - 4.2.1.3 Quantum Mechanical Description 73
 - 4.2.2 Dynamic Equilibrium: The Net Magnetization Vector of Matter 74
 - 4.3 Radio Waves 75
 - 4.3.1 Disturbing the Dynamic Equilibrium: The RF Field 75
 - 4.3.2 Return to Dynamic Equilibrium: Relaxation 76
 - 4.3.2.1 Spin–lattice Relaxation 76
 - 4.3.2.2 Spin–spin Relaxation 77
 - 4.4 Signal Detection and Detector 78
 - 4.5 Imaging 79
 - 4.5.1 Introduction 79
 - 4.5.2 Slice or Volume Selection 80
 - 4.5.3 Position Encoding: The \vec{k} -theorem 80
 - 4.5.3.1 \vec{k} -theorem 82
 - 4.5.4 Dephasing Phenomena of Static Spins 84
 - 4.5.4.1 Undo Dephasing of Magnetic Field Gradients 84
 - 4.5.4.2 Undo Dephasing of Magnetic Field Inhomogeneities 84
 - 4.5.5 Basic Pulse Sequences 85
 - 4.5.5.1 The Spin-echo Pulse Sequence 85
 - 4.5.5.2 The Gradient-echo Pulse Sequence 87
 - 4.5.6 Three-dimensional Imaging 88
 - 4.5.7 Acquisition and Reconstruction Time 89
 - 4.5.8 Fast Imaging Sequences 89
 - 4.5.8.1 Multi-slice Imaging 89
 - 4.5.8.2 Multiple Echoes per Excitation 90
 - 4.5.8.3 Parallel Imaging 91
 - 4.5.9 Phase-based Imaging 92
 - 4.5.9.1 Susceptibility-Weighted Imaging (SWI) 93
 - 4.5.9.2 Chemical Shift Imaging (CSI) 93
 - 4.5.10 Dephasing Phenomena of Moving Spins 94
 - 4.5.11 Magnetic Resonance Angiography (MRA) 96
 - 4.5.11.1 Inflow MRA 96
 - 4.5.11.2 Phase-contrast (PC) MRA 97
 - 4.5.11.3 Contrast-enhanced (CE) MRA 97
 - 4.5.12 Perfusion Imaging 99
 - 4.5.13 Diffusion Imaging 100
 - 4.5.14 Blood Oxygenation Level Dependent Imaging (BOLD) 102
 - 4.5.15 Magnetic Particle Imaging (MPI) 103
- 4.6 Image Quality 105**
 - 4.6.1 Contrast 105
 - 4.6.2 Resolution 106
 - 4.6.2.1 Resolution in the Fourier Space 106
 - 4.6.2.2 Resolution in the Image Space 106
 - 4.6.3 Noise 107
 - 4.6.4 Artifacts 107
- 4.7 Equipment 110
- 4.8 Clinical Use 112
- 4.9 Biological Effects and Safety 112
 - 4.9.1 Biological Effects 112
 - 4.9.1.1 RF waves 112
 - 4.9.1.2 Magnetic Gradients 113
 - 4.9.1.3 Static Magnetic Field 114
 - 4.9.2 Safety 115
- 4.10 Future Expectations 115
- 5 Nuclear Medicine Imaging 120**
 - 5.1 Introduction 120
 - 5.2 Functional Imaging 120
 - 5.3 Radioactive Decay 121
 - 5.3.1 Nucleon Emission or Capture 121
 - 5.3.2 Electron (β^-) Emission 121
 - 5.3.3 Electron Capture (EC) 122
 - 5.3.4 Positron Emission (β^+ Decay) 122
 - 5.3.5 Statistics 122
 - 5.4 Interaction of γ -Photons and Particles with Matter 123
 - 5.4.1 Interaction of Particles with Matter 123
 - 5.4.2 Interaction of γ -Photons with Matter 123
 - 5.5 Data Acquisition 123
 - 5.5.1 Detector 124
 - 5.5.1.1 Detecting the Photon 124
 - 5.5.1.2 Collimation 125
 - 5.5.1.3 Photon Position 125
 - 5.5.2 Number of Photons Detected 126

- 5.5.3 Energy Resolution 126
- 5.5.4 Count Rate 126
- 5.6 Imaging 127
 - 5.6.1 Planar Imaging 127
 - 5.6.2 Fourier Reconstruction and Filtered Backprojection 127
 - 5.6.3 Iterative Reconstruction 127
 - 5.6.3.1 Bayesian Approach 128
 - 5.6.3.2 Maximum-likelihood (ML) 128
 - 5.6.3.3 Maximum-a-posteriori Probability (MAP) 129
 - 5.6.4 3D Reconstruction 129
 - 5.6.4.1 Filtered Backprojection 131
 - 5.6.4.2 ML Reconstruction 131
 - 5.6.4.3 Fourier Rebinning 131
- 5.7 Image Quality 131
 - 5.7.1 Contrast 131
 - 5.7.2 Spatial Resolution 131
 - 5.7.3 Noise 132
 - 5.7.4 Artifacts 132
- 5.8 Equipment 134
 - 5.8.1 Gamma Camera and SPECT 134
 - 5.8.2 PET 135
 - 5.8.3 Time-of-flight (TOF) PET 137
 - 5.8.4 Hybrid Imaging 138
 - 5.8.4.1 PET-CT and SPECT-CT 138
 - 5.8.4.2 PET-MRI 139
- 5.9 Clinical Use 140
- 5.10 Biological Effects and Safety 144
- 5.11 Future Expectations 144
- 6 **Ultrasound Imaging** 147
 - 6.1 Introduction 147
 - 6.2 Physics of Acoustic Waves 147
 - 6.2.1 What Are Ultrasonic Waves? 147
 - 6.2.2 Generation of Ultrasonic Waves 148
 - 6.2.3 Wave Propagation in Homogeneous Media 148
 - 6.2.3.1 Linear Wave Equation 148
 - 6.2.3.2 Interference 149
 - 6.2.3.3 Attenuation 151
 - 6.2.3.4 Nonlinearity and Higher Harmonics 151
 - 6.2.4 Wave Propagation in Inhomogeneous Media 152
 - 6.2.4.1 Reflection and Refraction 153
 - 6.2.4.2 Scattering 154
 - 6.2.5 Wave Propagation and Motion: The Doppler Effect 154
 - 6.3 Generation and Detection of Ultrasound 156
 - 6.4 Obtaining Spatial Information 156
 - 6.4.1 Data Acquisition 156
 - 6.4.1.1 A-mode 156
 - 6.4.1.2 M-mode 157
 - 6.4.1.3 B-mode 157
 - 6.4.2 Image Reconstruction 157
 - 6.4.2.1 Filtering 157
 - 6.4.2.2 Envelope Detection 157
 - 6.4.2.3 Attenuation Correction 158
 - 6.4.2.4 Log-compression 158
 - 6.4.2.5 Scan Conversion 158
 - 6.4.3 Acquisition and Reconstruction Time 158
- 6.5 Measuring Blood Flow and Tissue Deformation 159
 - 6.5.1 Data Acquisition 159
 - 6.5.2 Reconstruction 160
 - 6.5.2.1 Continuous Wave Doppler 161
 - 6.5.2.2 Pulsed Wave Doppler 161
 - 6.5.2.3 Color Doppler 163
 - 6.5.2.4 Speckle Tracking and Strain 164
 - 6.5.2.5 Elasticity Imaging 164
 - 6.5.3 Acquisition and Reconstruction Time 165
- 6.6 Image Quality 166
 - 6.6.1 Spatial Resolution 166
 - 6.6.1.1 Axial Resolution 167
 - 6.6.1.2 Lateral and Elevation Resolution 167
 - 6.6.2 Noise 168
 - 6.6.3 Image Contrast 168
 - 6.6.4 Artifacts 168
 - 6.6.4.1 Side Lobes 168
 - 6.6.4.2 Reverberations 169
 - 6.6.4.3 Aliasing 169
- 6.7 Equipment 170
 - 6.7.1 One-dimensional Array Transducers 171
 - 6.7.2 Transducers for 3D Imaging 173
- 6.8 Clinical Use 174
 - 6.8.1 Structural Imaging 174
 - 6.8.2 Blood Flow and Tissue Deformation Mapping 176
 - 6.8.3 Contrast Echography 177
- 6.9 Biological Effects and Safety 177
- 6.10 Future Expectations 178
- 7 **Medical Image Computing** 184
 - 7.1 Introduction 184
 - 7.2 Interactive Methods 185
 - 7.3 Automated Image Computing 185
 - 7.3.1 Complexity of the Image Data 185
 - 7.3.2 Complexity of the Model or Prototype 186

Contents

7.3.2.1	Multimodal Analysis	186		
7.3.2.2	Multitemporal Analysis	187		
7.4	Computational Strategies for Automated Medical Image Computing	188		
7.4.1	Building a Model or Prototype	188		
7.4.2	Model-to-data Tuning	188		
7.4.3	Low-level Methods	189		
7.4.4	Model-based Methods	189		
7.4.4.1	Data Classification/Regression	189		
7.4.4.2	Model Fitting	191		
7.5	Data Classification/Regression	192		
7.5.1	Pixel Labeling	192		
7.5.1.1	Supervised Learning	192		
7.5.1.2	Unsupervised Learning	193		
7.5.1.3	Spatial Dependency	194		
7.5.2	Pattern Recognition	195		
7.6	Model Fitting	198		
7.6.1	Model Fitting Using a Transformation Matrix	200		
7.6.1.1	Fitting Image Patterns	201		
7.6.1.2	Fitting Shapes	203		
7.6.2	Flexible Model Fitting	205		
7.6.2.1	Fitting Flexible Image Patterns	206		
7.6.2.2	Fitting Flexible Shapes	208		
7.6.2.3	Fitting Flexible Image Patterns and Flexible Shapes	216		
7.7	Hybrid Strategies	216		
7.8	Validation	217		
7.9	Future Expectations	218		
8	Visualization for Diagnosis and Therapy	221		
8.1	Introduction	221		
8.2	2D Visualization	223		
8.3	3D Rendering	223		
8.3.1	Surface Rendering	225		
8.3.1.1	Surface Geometry	225		
8.3.1.2	Illumination and Shading	226		
8.3.2	Volume Rendering	229		
8.3.2.1	Position-Independent Transfer Functions	230		
8.3.2.2	Position-Dependent Transfer Functions	230		
8.4	Virtual Reality	233		
8.5	User Interaction	234		
8.6	Intraoperative Navigation	234		
8.6.1	Finding the Coordinates in the Surgery Space	236		
8.6.2	Calculating the Geometric Transformation	238		
8.7	Augmented Reality	242		
8.8	Future Expectations	245		
	<i>Further Reading</i>	249		
	<i>Index</i>	251
