0D defects, 56
13C isotope, 93
2D band, graphene, 80, 90
2D density of states, 400
2D material defects, 359
2D peak, graphene, 228
2D quantum spin Hall effect, 458
2D van der Waals heterostructures, 332
2DEG, plasmons, 44, 108–109
2DEGs, 45, 122
3×3 silicene phase, 460
3-band tight binding model, 282
3D resistivity, 225
3D van der Waals heterojunctions, 331
4×4 matrices, graphene, 15
α-BNyne, 480
α-graphynes, 480
π band, 474
π* band, 474
π-bond, 472
π-states, graphene, 12, 16
σ-states, graphene, 12
A and B excitons, 329, 331
AA stacking, graphene, 8
AB Bernal stacking, graphene growth, 245
AB bilayer graphene, 47, 78–79
ab-initio phonon calculations, 473
ab-initio phonon frequency calculations, 478
absorbance, 42
absorbance universal value, graphene, 40
absorbance, graphene, 39, 180
absorption, 30, 39, 41, 44–45, 135, 180, 192
absorption cross-section, graphene, 120, 122
absorption of phonons, 26
absorption resonance, graphene, 131
absorption/reflection spectroscopy, graphene, 38
access resistance, 163
acoustic (A) phonon, 34, 71
acoustic deformation potential, 34
acoustic modes, 10
acoustic phonon scattering, 34, 117, 121, 183, 225
acoustic phonon, graphene, 34, 77, 92, 96
acoustic phonons, dispersion, graphene, 96
admittance, 106–107
AFM topography analysis, 34, 274
all-dry deterministic transfer method, 448
ambipolar operation, 305
Ampère’s law, 105
amplifier, graphene, 164
amplitude attenuation length, plasmons, 115
amplitude lifetime, plasmons, 115
angular momentum conservation, 43
angular-dependent polarization-resolved Raman measurement, 422
anomalous quantum Hall effect, 207
anti-bonding states, 388
antimonene, 480
antimonene asymmetric washboard structure (aW-Sb), 480
antimonene buckled honeycomb (B-Sb), 480
anti-Stokes scattering, 78
anti-Stokes scattering, Raman spectroscopy, 78
archetype silicene phase, 460
armchair direction, 57, 59
armchair edges, graphene, 81
ARPES, 48, 118
ARPES, 46
asymmetric metal contacts, 186–187
atomic force microscopy (AFM), 53, 167
atomic hydrogen, 32
atomic layer deposition (ALD), 451
atomic orbital magnetic moment, 285
atomic vacancy, graphene, 32, 56
atomically sharp defects, 21
atomic-scale inhomogeneities, 15
back gated electric field, 36
back-gated BP transistor, 418
back-gating graphene, 145
background permittivity, 109
ballistic graphene devices, 148
ballistic limit, 299
ballistic spin propagation, 202
ballistic transport, 226–227, 297
ballistic transport, epitaxial graphene nanoribbons, 238
band counting algorithm, 410
band gap, 12, 47, 160, 168, 175, 230–231, 234
band gap engineering, graphene, 160, 171
band gap opening, 167
band gap opening, bilayer graphene, 170, 187
band gap, bilayer graphene, 19, 47–48, 164, 167
bandgap opening, graphene, 231
bandstructure, graphene, 180
basal plane, graphene, 55
basic transport properties, graphene, 25, 145
Becke three parameters Lee–Yang–Par (B3LYP), 382
bending stress, graphene, 61
benzyl viologen, 170–171
Bernal AB stacking, graphene, 7, 170
Bernal stacked, bilayer graphene, 94
Bernal stacking, bilayer graphene, 17
Bernal stacking, graphene, 8, 46
Bernal structure, 219
Berry curvature, 286–287
Berry phase effect, 207, 286
Bethe–Salpeter equations, 398
beyond RPA, 114
Bi$_2$Sr$_2$Co$_2$O$_y$ layer, 172
bilayer, 18, 20, 48, 74, 84, 125, 134
bilayer and multilayer graphene, 46
bilayer graphene, 46–47, 47, 74–75, 77–78, 91, 93–94, 126, 159, 170, 172, 175, 185
bilayer graphene bolometer, 185
bilayer graphene devices, 170
bilayer graphene transistors, 169
bilayer graphene, FET, 170
bilayer optical transitions, 38
birefringence, 110
birefringent dielectric, 111
birefringent dielectric, h-BN, 110
birefringent material h-BN, 110
bismuth selenide, 214
bismuth-flux method, 415
black arsenic–phosphorus band gap, 436
black phosphorene, 72, 480
black phosphorus, 74, 78
BLG, 230
Bloch electron Berry phase effect, 285
Bloch electron magnetic moment, 285
Bloch electrons, 286
Bloch function, 286
Bloch functions rotational symmetry, 283
Bloch wave functions, 280
Bloch–Grüneisen temperature, 300
block copolymer lithography, 168
blue phosphorene, 72, 74, 480
blue phosphorene in-plane deformation, 405
BN encapsulated graphene, 231
bolometers, 185
bolometric effect, 135, 183, 187
Boltzmann equation, 26
Boltzmann transport theory, 25, 27
Born approximation, 26, 29
Born–Oppenheimer (BO) surface, 473
Bose–Einstein distribution, phonons, 77
bound excitons, 331
BP ab-initio methods, 436
BP absorption spectra, 394
BP ambipolar field effect, 448
BP angle-dependent electrical conductivity, 381
BP angle-dependent electronic mobility, 404
BP angle-dependent thermal conductivity, 381
BP angular dependence drain current, 418
BP anisotropic carrier effective masses, 391
BP anisotropic lattice vibration, 426
BP anisotropic medium, 389
BP anisotropic optical conductivity, 425
BP anisotropic optical properties, 438
BP anisotropic photoluminescence, 440
BP anisotropic Poisson’s ratio, 381
BP anisotropic properties, 381, 414
BP anisotropic sound velocity, 399
BP anisotropic thermal expansion, 424
BP anisotropic thermal transport behavior, 425
BP anisotropy absorption, 439
BP anisotropy ratio, 404
BP armchair, 381, 399, 416
BP armchair mobility, 417
BP armchair phonon mode, 400
BP armchair tensile strains, 381
BP asymmetric lattice structure, 440
BP asymmetric phonon dispersion, 423
BP atomic orbital wave functions, 383
BP ballistic transport limit, 401
BP band structure calculation, 417
BP bending stiffness, 407
BP binding energies, 398
BP bolometric effect, 446
BP Brillouin zone, 399
BP bulk band structures, 382
BP bulk optical bandgap, 409
BP carrier effective mass, 417
BP carrier mobility, 175, 391
BP catalysis, 381
BP catalyst developed synthesis, 415
BP charge doping, 393
BP chemical stability, 451
BP compressive strains, 426
BP compressive zigzag strain, 428
BP contact resistance transfer length method (TLM), 421
BP coupled hinge-like bonding configurations, 414
BP crystal structure, 381, 414
BP crystalline orientation, 438
BP direct optical transition, 394
BP doped phototransistors, 443
BP Drude model, 391
BP effective Hamiltonian, 383
BP effective mass, 386, 417
BP effective mass for conduction band state, 386
BP effective mass for valence band state, 386
BP elastic acoustic phonon-carrier scattering, 391
BP electrical properties, 429

TMDs vertically stacked, 350
top-gating graphene, 145
topological defects, 363
topological insulators, 20, 214, 232
topological insulators, 232
topological state, 214
touch screens, graphene, 194
transconductance, 162
transfer characteristics, 166
transfer characteristics, bilayer FET, 171
transfer technique fabrication, 313
transit time, 183
transition metal dichalcogenides (TMD), 472
transition metal oxides, 233, 472
transmission of carriers, p–n interface, 143
transmission probability, angle dependence, 92–93
transport in magnetic field, 146
transversal (T) phonons, 71
transverse acoustic (TA) phonons, 92–93
transverse magnetic field, 105
trap state density, 446
trapping lifetime, 183
trigonal warping, 180, 288, 340
trigonal warping, graphene, 17
trilayer graphene, 46, 74, 91
tron, 284
tron first-principles calculations, 284
tunable bandgap, bilayer, 48
tunability of Fermi level, 200
tunability of the electron system, graphene, 25
tunability, carrier density, 127, 130
tunable band gap, 170
tunable bandgap, bilayer graphene, 46
tunable interband transitions, 41
tunable metasurfaces, graphene, 135
tunable THz filter, graphene, 193
tungsten hexacarbonyl (W(CO)6), 351
twin boundary graphene, 368
twin grain boundaries conductivity, 368
twisted bilayer, graphene, 73–74, 93–94
two-band massive Dirac fermion model, 286
two-center approximation, 323
two-dimensional electron systems (2DES), 28
type-II band alignment, 310, 335
ultrafast carrier dynamics, 184
ultrafast interlayer charge transfer, 314, 317
ultrafast lasers, graphene, 189
ultrahigh speed transistors, graphene, 160
ultrarelativistic regime, 20
ultra-short channel transistors, 174
Umklapp scattering, 92, 94, 401
Umklapp-assisted light cones, 321
Umklapp-assisted momentum conservation, 321
uni-axial stress, 61
unilateral gain (U), 162
unipolar resistance graphene, 146
uniaxial strain, graphene, 73–74
valley dependent spin splitting, 291
valley functionality of interlayer excitons, 324
valley Hall current, 286, 291
valley Hall current, 289, 291
valley Hall effect, 286
valley Hall effect, 280, 287
valley Hall effect, inversion symmetry breaking, 289
valley magnetic moment, 285
valley optical selection rule, 280, 283
valley optoelectronic, 310
valley polarization, 287
valley polarization detection, 330
valley polarization/coherence, 285
valley pseudospin, 279, 287
valley pseudospin component, 282
valley quantum coherence, 285
valley Zeeman effect, 280, 285
valley Zeeman shift, 285
valley Zeeman splitting, 286
