<i>About the Cover</i>	<i>page</i> xiii
<i>Preface to the First Edition</i>	xv
<i>Preface to the Second Edition</i>	xvii
<b>1 Vector and Tensor Calculus</b>	<b>1</b>
1.1 Introduction	1
1.2 Definition of a Vector	1
1.3 Vector Operations	1
1.4 Decomposition of a Vector with Respect to a Basis	5
1.5 Some Mathematical Preliminaries on Second-Order Tensors	10
Exercises	13
<b>2 The Concepts of Force and Moment</b>	<b>16</b>
2.1 Introduction	16
2.2 Definition of a Force Vector	16
2.3 Newton's Laws	18
2.4 Vector Operations on the Force Vector	19
2.5 Force Decomposition	20
2.6 Drawing Convention	24
2.7 The Concept of Moment	25
2.8 Definition of the Moment Vector	26
2.9 The Two-Dimensional Case	30
2.10 Drawing Convention for Moments in Three Dimensions	33
Exercises	34
<b>3 Static Equilibrium</b>	<b>39</b>
3.1 Introduction	39
3.2 Static Equilibrium Conditions	39
3.3 Free Body Diagram	42
Exercises	51

<b>4</b>	<b>The Mechanical Behaviour of Fibres</b>	56
4.1	Introduction	56
4.2	Elastic Fibres in One Dimension	56
4.3	A Simple One-Dimensional Model of a Skeletal Muscle	59
4.4	Elastic Fibres in Three Dimensions	62
4.5	Small Fibre Stretches	69
	Exercises	73
<b>5</b>	<b>Fibres: Time-Dependent Behaviour</b>	79
5.1	Introduction	79
5.2	Viscous Behaviour	81
5.2.1	Small Stretches: Linearization	84
5.3	Linear Visco-Elastic Behaviour	85
5.3.1	Superposition and Proportionality	85
5.3.2	Generalization for an Arbitrary Load History	88
5.3.3	Visco-Elastic Models Based on Springs and Dashpots: Maxwell Model	92
5.3.4	Visco-Elastic Models Based on Springs and Dashpots: Kelvin–Voigt Model	96
5.4	Harmonic Excitation of Visco-Elastic Materials	97
5.4.1	The Storage and the Loss Modulus	97
5.4.2	The Complex Modulus	99
5.4.3	The Standard Linear Model	101
5.5	Appendix: Laplace and Fourier Transforms	106
	Exercises	108
<b>6</b>	<b>Analysis of a One-Dimensional Continuous Elastic Medium</b>	116
6.1	Introduction	116
6.2	Equilibrium in a Subsection of a Slender Structure	116
6.3	Stress and Strain	118
6.4	Elastic Stress–Strain Relation	121
6.5	Deformation of an Inhomogeneous Bar	122
	Exercises	129
<b>7</b>	<b>Biological Materials and Continuum Mechanics</b>	133
7.1	Introduction	133
7.2	Orientation in Space	134
7.3	Mass within the Volume $V$	138
7.4	Scalar Fields	141
7.5	Vector Fields	144

7.6	Rigid Body Rotation	149
	Exercises	151
<b>8</b>	<b>Stress in Three-Dimensional Continuous Media</b>	155
8.1	Stress Vector	155
8.2	From Stress to Force	156
8.3	Equilibrium	157
8.4	Stress Tensor	164
8.5	Principal Stresses and Principal Stress Directions	172
8.6	Mohr's Circles for the Stress State	175
8.7	Hydrostatic Pressure and Deviatoric Stress	176
8.8	Equivalent Stress	177
	Exercises	178
<b>9</b>	<b>Motion: Time as an Extra Dimension</b>	183
9.1	Introduction	183
9.2	Geometrical Description of the Material Configuration	183
9.3	Lagrangian and Eulerian Descriptions	185
9.4	The Relation between the Material and Spatial Time Derivatives	188
9.5	The Displacement Vector	190
9.6	The Gradient Operator	192
9.7	Extra Rigid Body Displacement	196
9.8	Fluid Flow	198
	Exercises	199
<b>10</b>	<b>Deformation and Rotation, Deformation Rate and Spin</b>	204
10.1	Introduction	204
10.2	A Material Line Segment in the Reference and Current Configurations	204
10.3	The Stretch Ratio and Rotation	210
10.4	Strain Measures and Strain Tensors and Matrices	214
10.5	The Volume Change Factor	219
10.6	Deformation Rate and Rotation Velocity	219
	Exercises	222
<b>11</b>	<b>Local Balance of Mass, Momentum and Energy</b>	227
11.1	Introduction	227
11.2	The Local Balance of Mass	227
11.3	The Local Balance of Momentum	228

11.4	The Local Balance of Mechanical Power	230
11.5	Lagrangian and Eulerian Descriptions of the Balance Equations	231
	Exercises	233
<b>12</b>	<b>Constitutive Modelling of Solids and Fluids</b>	<b>235</b>
12.1	Introduction	235
12.2	Elastic Behaviour at Small Deformations and Rotations	236
12.3	The Stored Internal Energy	242
12.4	Elastic Behaviour at Large Deformations and/or Large Rotations	244
	12.4.1 Material Frame Indifference	244
	12.4.2 Strain Energy Function	250
	12.4.3 The Incompressible Neo-Hookean Model	252
	12.4.4 The Incompressible Mooney–Rivlin Model	255
	12.4.5 Compressible Neo-Hookean Elastic Solid	256
12.5	Constitutive Modelling of Viscous Fluids	261
12.6	Newtonian Fluids	262
12.7	Non-Newtonian Fluids	263
12.8	Diffusion and Filtration	264
	Exercises	264
<b>13</b>	<b>Solution Strategies for Solid and Fluid Mechanics Problems</b>	<b>270</b>
13.1	Introduction	270
13.2	Solution Strategies for Deforming Solids	270
	13.2.1 General Formulation for Solid Mechanics Problems	271
	13.2.2 Geometrical Linearity	272
	13.2.3 Linear Elasticity Theory, Dynamic	273
	13.2.4 Linear Elasticity Theory, Static	273
	13.2.5 Linear Plane Stress Theory, Static	274
	13.2.6 Boundary Conditions	278
13.3	Solution Strategies for Viscous Fluids	280
	13.3.1 General Equations for Viscous Flow	281
	13.3.2 The Equations for a Newtonian Fluid	282
	13.3.3 Stationary Flow of an Incompressible Newtonian Fluid	282
	13.3.4 Boundary Conditions	283
	13.3.5 Elementary Analytical Solutions	283
13.4	Diffusion and Filtration	285
	Exercises	287
<b>14</b>	<b>Solution of the One-Dimensional Diffusion Equation by Means of the Finite Element Method</b>	<b>292</b>
14.1	Introduction	292

14.2	The Diffusion Equation	293
14.3	Method of Weighted Residuals and Weak Form	295
14.4	Polynomial Interpolation	297
14.5	Galerkin Approximation	300
14.6	Solution of the Discrete Set of Equations	307
14.7	Isoparametric Elements and Numerical Integration	308
14.8	Basic Structure of a Finite Element Program	312
	Exercises	319
<b>15</b>	<b>Solution of the One-Dimensional Convection–Diffusion Equation by Means of the Finite Element Method</b>	<b>327</b>
15.1	Introduction	327
15.2	The Convection–Diffusion Equation	327
15.3	Temporal Discretization	330
15.4	Spatial Discretization	333
	Exercises	338
<b>16</b>	<b>Solution of the Three-Dimensional Convection–Diffusion Equation by Means of the Finite Element Method</b>	<b>342</b>
16.1	Introduction	342
16.2	Diffusion Equation	343
16.3	Divergence Theorem and Integration by Parts	344
16.4	Weak Form	345
16.5	Galerkin Discretization	345
16.6	Convection–Diffusion Equation	348
16.7	Isoparametric Elements and Numerical Integration	349
16.8	Example	353
	Exercises	356
<b>17</b>	<b>Shape Functions and Numerical Integration</b>	<b>363</b>
17.1	Introduction	363
17.2	Isoparametric, Bi-Linear Quadrilateral Element	365
17.3	Linear Triangular Element	367
17.4	Lagrangian and Serendipity Elements	370
17.4.1	Lagrangian Elements	371
17.4.2	Serendipity Elements	373
17.5	Numerical Integration	373
	Exercises	377

<b>18</b>	<b>Infinitesimal Strain Elasticity Problems</b>	382
18.1	Introduction	382
18.2	Linear Elasticity	382
18.3	Weak Formulation	384
18.4	Galerkin Discretization	385
18.5	Solution	391
	Exercises	394
	<i>References</i>	399
	<i>Index</i>	401
