	<i>Preface</i>	<i>page</i> ix
	<i>Acknowledgments</i>	xi
1	Introduction to Interference Management	1
	1.1 Interference Management in Cellular Networks: A Historical Perspective	1
	1.1.1 Cellular Concept	1
	1.1.2 Code-Division Multiple-Access	2
	1.1.3 Orthogonal Frequency-Division Multiplexing	2
	1.2 Additional Resources for Interference Management	3
	1.2.1 Multiple Antennas	3
	1.2.2 Cooperation and Relaying	3
	1.2.3 Cognitive Radio and Dynamic Spectrum Access	4
	1.3 Motivation for This Book	4
	1.4 Overview of This Book	4
	1.5 Notation	5
2	System Model and Sum Capacity Characterization	6
	2.1 System and Channel Model	6
	2.1.1 Achievable Schemes	6
	2.1.2 Channel Knowledge	8
	2.2 Two-User Interference Channel	8
	2.2.1 Standard Form	9
	2.2.2 Achievable Sum-Rate	11
	2.2.3 Locally Optimal Solution	12
	2.2.4 Convex Approximation and Optimization	13
	2.2.5 Genie-Aided Channel	13
	2.2.6 Useful Genie: Concavity Property	14
	2.2.7 Convexity Property	15
	2.2.8 Sum Capacity Upper Bound	16
	2.2.9 Smart Genie: Zero Gap	17
	2.2.10 Low Interference Regime	19
	2.2.11 Simplified KKT Conditions	21
	2.2.12 SISO Interference Channel	24
	2.2.13 Symmetric MISO and SIMO Interference Channels	26
	2.2.14 Two-User Gaussian Interference Channel – Summary	36

vi	Contents	
	2.3	<i>K</i> -User Interference Channels 36
	2.3.1	Many-to-One Interference Channel 38
	2.3.2	One-to-Many Interference Channel 39
	2.3.3	Scalar Genie 40
	2.3.4	Vector Genie 42
	2.3.5	Useful Genie 43
	2.3.6	Smart Genie 43
	2.3.7	Low Interference Regime 45
	2.3.8	Symmetric Interference Channel 45
	2.3.9	<i>K</i> -User Interference Channel – Summary 47
	2.4	Notes and Further Reading 48
3	Degrees of Freedom and Interference Alignment	50
	3.1	Degrees of Freedom 50
	3.2	Vector Space Interference Alignment for a Fully Connected Interference Channel 52
	3.3	Asymptotic Interference Alignment 53
	3.3.1	Discussion 56
	3.4	Interference Alignment Bounds with Finite Diversity 56
	3.4.1	Constant MIMO Channel 57
	3.4.2	Finite Time/Frequency Diversity 59
	3.4.3	Discussion 60
4	Iterative Algorithms for Interference Management	61
	4.1	Channel Model and Preliminaries 61
	4.1.1	Reciprocal Channel 63
	4.2	Iterative Algorithms Based on Interference Alignment 63
	4.2.1	Other Algorithms Based on Interference Alignment 64
	4.3	Max SINR Algorithm 65
	4.3.1	Convergence Behavior of Max SINR Algorithm 66
	4.4	Convergent Variant of Max SINR Algorithm 66
	4.4.1	Achieving Equal SINRs on Forward and Reverse Channels 67
	4.4.2	Convergent Max SINR 68
	4.5	Performance of Convergent Max SINR Algorithm 69
	4.6	Discussion 70
5	Degrees of Freedom with Coordinated Multi-Point Transmission	71
	5.1	Interference Alignment with CoMP 71
	5.2	Proving that Interference Alignment Achieves CoMP Transmission Gains 73
	5.2.1	Derived Channel 73
	5.2.2	Zero-Forcing Step 74
	5.2.3	Asymptotic Interference Alignment 76
	5.2.4	Proof of Algebraic Independence 78
	5.3	Degrees of Freedom Upper Bound for CoMP 78
	5.4	Degrees of Freedom Cooperation Gain 81

	5.4.1 Local Cooperation	81
	5.4.2 General Upper Bounds	82
	5.5 Auxiliary Lemmas for Large Network Upper Bounds	84
	5.6 Connection between DoF Upper Bound and Bipartite Vertex Expanders	87
	5.7 Iterative Algorithms for Constant MIMO Channel with CoMP	90
	5.8 Discussion: Justifying Model Choices	92
	5.8.1 Cooperation Constraint	92
	5.8.2 Large Networks	93
	5.8.3 Degrees of Freedom	93
6	Locally Connected Channels with CoMP	95
	6.1 Channel Model	95
	6.2 Interference-Aware Cell Association	96
	6.3 One-Shot Linear Beamforming Schemes	97
	6.3.1 Linear Network with Two Transmitters per Message	98
	6.3.2 Linear Network with Multiple Transmitters per Message	100
	6.3.3 Locally Connected Network with Multiple Transmitters per Message	101
	6.3.4 Optimal Zero-Forcing Schemes	102
	6.4 Optimality of Local Cooperation	104
	6.4.1 Useful Message Assignments	104
	6.4.2 Local Cooperation	106
	6.5 Degrees of Freedom in Linear Networks	107
	6.6 Discussion: SISO Interference Channels	108
	6.6.1 Message Assignment Strategy	108
	6.6.2 Design of Transmit Beams	109
	6.7 Multiple-Antenna Transmitters: Shared versus Dedicated Antennas	109
	6.7.1 Coding Scheme	110
	6.7.2 Zero-Forcing Transmit Beamforming Upper Bound	112
	6.7.3 Successive Transmit Sets Upper Bound	114
	6.7.4 Discussion: Dedicated versus Shared Antennas	117
	6.8 Proof of Multiple-Antenna Transmitters Upper Bound	118
	6.8.1 Proof of Non-Singularity of Matrix M_1	118
	6.8.2 Proof of Non-Singularity of Any $MN \times MN$ Submatrix of M_N	119
	6.9 Notes and Further Reading	125
7	Backhaul Load Constraint	126
	7.1 Example: CoMP with No Extra Backhaul Load	127
	7.2 Flexible Backhaul Design and the Optimal DoF Scheme	128
	7.2.1 Using Schemes Developed under Per-Message Backhaul Constraint	130
	7.2.2 Upper Bound Proof	131
	7.3 General Locally Connected Networks	134
	7.4 Cellular Network Models	136
	7.4.1 Example: Two-Dimensional Wyner Network	136

viii	Contents	
	7.4.2 Hexagonal Cellular Networks with No Cooperation	137
	7.4.3 Flexible Message Assignment with Cooperation	145
	7.5 Summary	145
8	Cellular Uplink	148
	8.1 CoMP Reception	149
	8.1.1 Structural Matrix Decomposition	150
	8.2 Message Passing Model	152
	8.3 Joint Downlink–Uplink Backhaul Design	155
	8.3.1 Example: Wyner’s Network with Two Cell Associations	156
	8.3.2 Average Per-User DoF for Wyner’s Network	156
	8.3.3 Average Per-User DoF for General Locally Connected Networks	160
	8.4 Discussion	162
9	Dynamic Interference Management	165
	9.1 Dynamic Interference Channel	166
	9.2 Optimal Cell Association	166
	9.3 CoMP Transmission	174
	9.4 Summary	181
10	Recent Advances and Open Problems	183
	10.1 Heterogeneous Cellular Network with Shared Wireless Backhaul	184
	10.2 Cooperation with No CSIT	185
	10.2.1 Topological Interference Management	186
	10.2.2 Optimality of TDMA	188
	10.2.3 The Questionable Role of Cooperation	189
	10.3 Learning the Network Topology	191
	Appendix A: Information Theory	193
	A.1 Minimum Mean Squared Error Estimation	193
	A.2 Basic Extremal Inequalities	194
	A.3 Concave Functions	195
	A.4 More Extremal Inequalities	196
	Appendix B: Algebraic Geometry	201
	B.1 Varieties and Ideals	201
	B.2 Algebraic Independence and Jacobian Criterion	202
	B.3 Dominant Maps and Generic Properties	202
	B.4 Full-Rankness of a Certain Random Matrix	203
	<i>References</i>	206
	<i>Index</i>	213
