

## Index

- antibaryons
  - double heavy antiquarks, 175
  - with a heavy antiquark, 175
- baryons, 1, 44
  - $\Omega_c$  baryons, 11, 105, 111, 173
  - decays to pentaquark, 126
  - in  $bb$  tetraquark decays, 202, 204
  - doubly charm, 11, 173, 178
  - doubly heavy, 174
  - in large  $N$  QCD, 138
  - masses, 39, 41, 46
- binding energy, 48, 50, 61, 208
  - and scattering length, 61, 210, 211
- Breit–Wigner, 20, 27, 114, 116, 117
- Casimir coefficients, 32
- chiral symmetry, x, 71, 72, 75, 117
  - lagrangian, 176
- compact tetraquark, 1, 10, 34, 83, 172
  - mass formula
    - $P$ -wave, 109, 111
    - $S$ -wave, 84, 90, 91, 93
  - vs. molecules, 56, 62
  - decays, 101, 103
  - double well potential, 94, 97
  - in  $B$  decays, 98, 99
  - in large  $N$  QCD, 137, 142, 143
  - isospin breaking, 96, 97
  - mixing with charmonia, 146
  - with double heavy quarks, 173, 175, 177
    - and stability, 179, 194
    - as point color source, 175
    - effective theory, 139, 174, 177
    - in Born–Oppenheimer approximation, 183, 185
    - in lattice QCD, 183, 188, 189, 191
    - in quark model, 178, 180, 182
- constituent quark model, 10, 30, 35, 44, 45, 63, 77, 176
- cusp, 9, 114, 117
- dibaryon, 34, 63
- hadron molecule, 47
  - decays, 58
  - meson–baryon, 115, 117
  - mixing with charmonia, 56
  - momentum distribution, 50, 51
  - one pion exchange, 59
  - production at colliders, 51, 53
  - radius, 49
  - scattering length, 47
- hadroquarkonium, 12, 115
- Hamiltonian
  - pentaquark, 120
  - tetraquark, 77, 88, 89, 97, 107, 120
- heavy quark limit, 11, 101, 126, 160
- heavy quark symmetry, 117, 128, 173, 175, 176
- HQET, Heavy Quark Effective Theory, 175
- QHQDS, Heavy Quark Heavy Diquark Symmetry, 176
- $J/\psi$   $\phi$  structures, 23, 92–94
  - mass formula, 93
- large  $N$  QCD, 10, 132
- mesons,  $q\bar{q}$ , 1
  - $P$ -wave, 78, 81
  - hidden beauty, 23, 80, 81
  - hidden charm, 14, 15, 80, 81
  - mass formulae, 38, 44, 69, 80
- NRQCD, Nonrelativistic QCD, 56, 150, 176
- pentaquark, 8, 113, 114, 118, 171
  - decuplet, 128
  - in  $b$ -baryon decays, 127

232

pentaquark, (*Cont.*)  
 mass formula, 121  
 state classification, 121  
 as baryocharmonium, 115  
 decays, 127  
 diquark–triquark, 121  
 hidden beauty, 117  
 hidden charm, 113, 117, 120  
 in lattice QCD, 172  
 masses, 122, 123  
 octet, 128  
 quantum numbers, 9, 113

rescattering models, 115

scalar mesons, 1, 64, 69  
*P*-wave, 81  
 as tetraquarks, 65, 67  
 instanton effects, 70

*Index*

light, 64  
 decays, 72  
 in constituent quark model, 76  
 mass formulae, 68  
 mixing with heavier scalars, 69, 70, 76  
 spectrum, 66  
 superflavor symmetry, 176

Wigner's 6-*j* symbols, 109, 212, 214

X(3872), 15, 47–51, 53, 56, 58, 91, 96, 99, 104

Y states, 105, 107  
*L* = 1 supermultiplet, 111  
 mass formula, 109  
 Y(4260), 16, 18, 106, 107

Z(4430), 19, 20  
 as radial excitation, 92
