PREFACE	1
1 INTRODUCTION	5
1.1 Point-to-Point MIMO	6
1.2 Multiuser MIMO	8
1.3 Massive MIMO	10
1.4 Time-Division versus Frequency-Division Duplexing	15
1.5 Summary of Key Points	18
2 MODELS AND PRELIMINARIES	19
2.1 Single-Antenna Transmitter and Single-Antenna Receiver	19
2.1.1 Coherence Time	19
2.1.2 Coherence Bandwidth	21
2.1.3 Coherence Interval	22
2.1.4 Interpretation of T_c and B_c in Terms of Nyquist Sampling Rate	23
2.1.5 TDD Coherence Interval Structure	24
2.1.6 The Coherence Interval in the Context of OFDM Modulation	25
2.1.7 Small-Scale and Large-Scale Fading	29
2.1.8 Normalized Signal Model and SNR	30
2.2 Multiple Base Station Antennas and Multiple Terminals	30
2.2.1 Single-Cell System	31
2.2.2 Multi-Cell System	33
2.3 Capacity Bounds as Performance Metric	36
2.3.1 Deterministic Channel with Additive Gaussian Noise	38
2.3.2 Deterministic Channel with Additive Non-Gaussian Noise	38
2.3.3 Fading Channel with Gaussian Noise and Perfect CSI at the Receiver	38
2.3.4 Fading Channel with Non-Gaussian Noise and no CSI at the Receiver	39
2.3.5 Fading Channel with Non-Gaussian Noise and Side Information	40
2.4 Summary of Key Points	41
3 SINGLE-CELL SYSTEMS	45
3.1 Uplink Pilots and Channel Estimation	45
3.1.1 Orthogonal Pilots	46

vi	CONTENTS	
	3.1.2 De-Spreading of the Received Pilot Signal	46
	3.1.3 MMSE Channel Estimation	47
3.2	Uplink Data Transmission	48
	3.2.1 Zero-Forcing	50
	3.2.2 Maximum-Ratio	53
3.3	Downlink Data Transmission	56
	3.3.1 Linear Precoding	56
	3.3.2 Zero-Forcing	58
	3.3.3 Maximum-Ratio	59
3.4	Discussion	62
	3.4.1 Interpretation of the Effective SINR Expressions	63
	3.4.2 Implications for Power Control	65
	3.4.3 Scaling Laws and Upper Bounds on the SINR	65
3.5	Near-Optimality of Linear Processing when $M \gg K$	67
3.6	Net Spectral Efficiency	69
3.7	Limiting Factors: Number of Antennas and Mobility	70
3.8	Summary of Key Points	75
4	MULTI-CELL SYSTEMS	77
4.1	Uplink Pilots and Channel Estimation	78
4.2	Uplink Data Transmission	79
	4.2.1 Zero-Forcing	80
	4.2.2 Maximum-Ratio	82
4.3	Downlink Data Transmission	85
	4.3.1 Zero-Forcing	87
	4.3.2 Maximum-Ratio	88
4.4	Discussion	92
	4.4.1 Asymptotic Limits with Infinite Numbers of Base Station Antennas	92
	4.4.2 The Effects of Pilot Contamination	94
	4.4.3 Non-Synchronous Pilot Interference	94
4.5	Summary of Key Points	96
5	POWER CONTROL PRINCIPLES	97
5.1	Preliminaries	97
5.2	Power Control with Given SINR Targets	99
	5.2.1 Single-Cell System	100
	5.2.2 Multi-Cell System	100
5.3	Max-Min Fairness Power Control	101
	5.3.1 Single-Cell System with Max-Min Fairness	101

5.3.2	Multi-Cell Systems with Network-Wide Max-Min Fairness	105
5.3.3	Negligible Coherent Interference and Full Power	106
5.3.4	Uniformly Good Service	112
5.4	Summary of Key Points	112
6	CASE STUDIES	115
6.1	Single-Cell Deployment Example: Fixed Broadband Access in Rural Area	115
6.1.1	Required Number of Antennas and Radiated Power	118
6.1.2	Analysis of the Max-Min Fairness Power Control Policy	121
6.2	Multi-Cell Deployment: Preliminaries and Algorithms	122
6.2.1	Multi-Cell Cluster Modeling and Pilot Reuse	122
6.2.2	Assignment of Terminals to Base Stations	124
6.2.3	Dropping Terminals from Service	125
6.2.4	Pilot Assignment and Required Pilot Sequence Length	126
6.2.5	Max-Min Power Control that Accounts for Coherent Interference	127
6.3	Multi-Cell Deployment Examples: Mobile Access	128
6.3.1	Dense Urban Scenario	129
6.3.2	Suburban Scenario	129
6.3.3	Minimum Per-Terminal Throughput Performance	130
6.3.4	Additional Observations	133
6.3.5	Comparison of Power Control Policies	134
6.4	Summary of Key Points	138
7	THE MASSIVE MIMO PROPAGATION CHANNEL	139
7.1	Favorable Propagation and Deterministic Channels	139
7.1.1	Capacity Upper Bound	140
7.1.2	Distance from Favorable Propagation	141
7.1.3	Favorable Propagation and Linear Processing	141
7.1.4	Singular Values and Favorable Propagation	142
7.2	Favorable Propagation and Random Channels	143
7.2.1	Independent Rayleigh Fading	143
7.2.2	Uniformly Random Line-of-Sight (UR-LoS)	145
7.2.3	Independent Rayleigh Fading versus UR-LoS	146
7.3	Finite-Dimensional Channels	153
7.4	Summary of Key Points	154
8	FINAL NOTES AND FUTURE DIRECTIONS	157
8.1	Alternative Approaches to Performance Analysis	157
8.2	Multiple-Antenna Terminals	157

8.3	Pilot Contamination and Pilot Assignment	158
8.4	Massive MIMO with FDD Operation	159
8.5	Cell-Free Massive MIMO	159
8.6	Signal Processing Algorithms	160
8.7	Effects of Non-Ideal Hardware	161
8.8	Random Access and Resource Allocation	161
8.9	Total Energy Efficiency	162
A	CIRCULARLY SYMMETRIC COMPLEX GAUSSIAN VECTORS	163
A.1	Complex Gaussian Random Vectors	163
A.2	Circularly Symmetric Complex Gaussian Random Vectors	163
A.2.1	Pseudo-Covariance Matrix	164
A.2.2	Probability Density Function	165
A.2.3	Linear Transformations	166
A.2.4	Fourth-Order Moment	167
B	USEFUL RANDOM MATRIX RESULTS	169
B.1	Symmetry	169
B.2	QR Factorization	170
B.3	Expectations	172
C	CAPACITY AND CAPACITY BOUNDING TOOLS	175
C.1	Jensen's Inequality	175
C.2	Point-to-Point Scalar Channel	176
C.2.1	Entropy is Invariant to Translation	177
C.2.2	The Gaussian Distribution Maximizes Entropy	177
C.2.3	Deterministic Channel with Additive Gaussian Noise	179
C.2.4	Deterministic Channel with Additive Non-Gaussian Noise	179
C.2.5	Fading Channel with Gaussian Noise and Perfect CSI at the Receiver	180
C.2.6	Fading Channel with Non-Gaussian Noise and Side Information	181
C.3	Point-to-Point MIMO Channel	183
C.3.1	Deterministic MIMO Channel	183
C.3.2	Fading MIMO Channel with Perfect CSI at the Receiver	185
C.4	Multiuser MIMO Channel	185
C.4.1	Multiple-Access Channel (Uplink)	187
C.4.2	Broadcast Channel (Downlink)	190
C.4.3	Fading and Imperfect CSI	194

	CONTENTS	ix
D ALTERNATIVE SINGLE-CELL CAPACITY BOUNDS		195
D.1 Uplink Zero-Forcing		195
D.1.1 Capacity Lower Bound via Jensen’s Inequality		195
D.1.2 Tightness of the Lower Bound (3.28)		196
D.2 Uplink Maximum-Ratio		197
D.2.1 Capacity Lower Bound via Jensen’s Inequality		197
D.2.2 Comparison of the Bounds (3.41) and (D.4)		198
D.3 Downlink Maximum-Ratio		200
E ASYMPTOTIC SINR IN MULTI-CELL SYSTEMS		203
F LINK BUDGET CALCULATIONS		205
G UNIFORMLY DISTRIBUTED POINTS IN A HEXAGON		207
H SUMMARY OF ABBREVIATIONS AND NOTATION		209
REFERENCES		213
INDEX		223
