|--|----------------|
| <i>Preface</i>   | <i>page xi</i> |
| <b>Part I    Introductory Material</b>                   | <b>1</b>       |
| 1    Introduction  | 3              |
| 1.1    A Broader Perspective                             | 4              |
| 1.2    The Concept of a Continuous Body                  | 5              |
| 2    Getting Started                                     | 9              |
| 2.1    Reference Coordinate System                       | 9              |
| 2.2    Waves and Flows                                   | 12             |
| 2.3    Scope and Organization                            | 14             |
| 2.4    Bits and Bobs                                     | 15             |
| <b>Part II   Kinematics, Dynamics and Rheology</b>       | <b>21</b>      |
| 3    Kinematics of Deformation and Flow                  | 23             |
| 3.1    Orientation to Kinematics                         | 23             |
| 3.2    Lagrangian Representation of Deformation and Flow | 24             |
| 3.3    Rotation and Strain Tensors                       | 26             |
| 3.4    Fluid Deformation and Rate of Strain              | 28             |
| 3.5    Material Surface                                  | 33             |
| 3.6    Comments  | 33             |
| 4    Dynamics and the Stress Tensor                      | 35             |
| 4.1    Forces  | 35             |
| 4.2    Introduction to the Stress Tensor                 | 36             |
| 4.3    Symmetry of the Stress Tensor                     | 38             |
| 4.4    Stress and Force                                  | 40             |
| 4.5    Pressure and Deviatoric Stress                    | 42             |
| 4.6    Conservation of Momentum                          | 43             |
| 4.7    Summary   | 46             |

|      |  |     |
|------|--|-----|
| vi   | <i>Contents</i>                              |     |
| 5    | Some Thermodynamics                          | 48  |
| 5.1  | New Adjectives                               | 48  |
| 5.2  | Differential Equation of State               | 49  |
| 5.3  | Conservation of Material                     | 50  |
| 5.4  | Energy Equation                              | 50  |
| 5.5  | The Isentropic State                         | 51  |
| 5.6  | Ideal Gas                                    | 52  |
| 6    | Shear Rheology                               | 54  |
| 6.1  | Elastic Solid                                | 55  |
| 6.2  | Fluid Rheology                               | 56  |
| 6.3  | Comments on the Parameters and Forces        | 63  |
| 6.4  | Mixtures                                     | 63  |
| 7    | Static State and Perturbations               | 67  |
| 7.1  | Static State                                 | 67  |
| 7.2  | Static Structure                             | 68  |
| 7.3  | Perturbation Equations                       | 79  |
| 7.4  | Boundary Layers                              | 80  |
| 7.5  | Dynamic Stability                            | 81  |
| 8    | Introduction to Rotating Fluids              | 83  |
| 8.1  | Rotational Concepts                          | 84  |
| 8.2  | Equations Governing Rotating Flows           | 87  |
| 8.3  | Vorticity and Pressure Equations             | 91  |
| 8.4  | Vertically Averaged Continuity Equation      | 93  |
| 8.5  | Geostrophic Balance                          | 95  |
| 8.6  | Quasi-Geostrophic Equations                  | 97  |
|      | <b>Part III Waves in Non-Rotating Fluids</b> | 101 |
| 9    | Introduction to Waves                        | 103 |
| 9.1  | General Wave Behavior                        | 105 |
| 9.2  | Orientation to Wave Analysis                 | 106 |
| 9.3  | Sound Waves                                  | 108 |
| 10   | Elastic Waves                                | 112 |
| 10.1 | Longitudinal Body Waves                      | 112 |
| 10.2 | Transverse Body Waves                        | 113 |
| 10.3 | Longitudinal Edge Waves                      | 114 |
| 10.4 | Transverse Edge Waves                        | 115 |
| 10.5 | Seismic Body Waves                           | 115 |
| 11   | Deep-Water Waves                             | 119 |
| 11.1 | Water Wave Equation                          | 119 |

|                | <i>Contents</i>                          | vii        |
|----------------|--|------------|
| 11.2           | Surface Boundary Conditions              | 121        |
| 11.3           | Surface Waves                            | 122        |
| 11.4           | Discussion of Waves                      | 124        |
| 11.5           | Ocean Waves                              | 125        |
| 11.6           | Water of Finite Depth                    | 132        |
| 12             | Linear Shallow-Water Waves               | 134        |
| 12.1           | Tsunamis                                 | 135        |
| 12.2           | Luni-Solar Tides                         | 136        |
| 12.3           | Seiches                                  | 141        |
| 12.4           | Coastal Waves                            | 141        |
| 13             | Nonlinear Shallow-Water Waves            | 146        |
| 13.1           | Re-Formulation                           | 146        |
| 13.2           | Scaling and Non-Dimensionalization       | 147        |
| 13.3           | Linear, Non-Dispersive                   | 149        |
| 13.4           | Nonlinear and Non-Dispersive             | 149        |
| 13.5           | Linear and Dispersive                    | 150        |
| 13.6           | Nonlinear and Dispersive                 | 150        |
| 14             | Other Non-Rotating Waves                 | 155        |
| 14.1           | Capillary Waves                          | 155        |
| 14.2           | Interfacial Waves                        | 157        |
| 14.3           | Internal Gravity Waves                   | 163        |
| <b>Part IV</b> | <b>Waves in Rotating Fluids</b>          | <b>167</b> |
| 15             | Geostrophic, Inertial and Rossby Waves   | 169        |
| 15.1           | Geostrophic Waves                        | 169        |
| 15.2           | Inertial Waves                           | 170        |
| 15.3           | Rossby Waves                             | 171        |
| 16             | Rotationally Modified Waves              | 174        |
| 16.1           | Poincaré Waves                           | 174        |
| 16.2           | Rotating Interfacial Waves               | 175        |
| 16.3           | Rotating Internal Gravity Waves          | 179        |
| 17             | Equatorial Waves                         | 182        |
| 17.1           | Development of Equatorial-Wave Equations | 182        |
| 17.2           | Equatorial Kelvin Waves                  | 184        |
| 17.3           | Equatorial Rossby Waves                  | 185        |
| 18             | Coastal and Topographic Waves            | 188        |
| 18.1           | Coastal Kelvin Waves                     | 188        |
| 18.2           | Topographic Rossby Waves                 | 189        |
