

Contents

<i>Preface</i>	<i>page ix</i>
1 Elements of Atoms, Molecules, and Wave Propagation	1
1.1 One-Electron Atoms	1
1.2 Two-Electron Atoms	16
1.3 Many-Electron Atoms	21
1.4 General Concepts and Structure of Diatomic Molecules	26
1.5 Structure of Polyatomic Molecules	34
1.6 Molecular Spectra	45
1.7 Propagation of a Laser Pulse in Free Space	54
1.8 Matrix Optics	62
1.9 Huygens' Integral through the General <i>ABCD</i> System	65
Notes and Comments	70
Exercises	70
References	72
2 Basic Formulation of Interactions between an Intense Laser Pulse and Atoms	74
2.1 The Formal Theory	74
2.2 Formulation of the Solution of the TDSE	76
2.3 Ultrashort Femtosecond Lasers: Representation, Generation, and Characterization	86
2.4 Tunnel Ionization Theory	94
2.5 SFA and Its Modifications	100
Notes and Comments	108
Exercises	108
References	109
3 Strong-Field Ionization and Low-Energy Electron Spectra of Atoms and Molecules	112
3.1 Total Ionization Yield	112
3.2 Total Ionization Yields versus Laser Intensity and Wavelength: Experiment versus Theory	119
3.3 Low-Energy Electrons and 2D Momentum Spectra: Multiphoton Ionization Regime	123
3.4 Surprising Features of Photoelectron Spectra for Ionization by Strong Mid-Infrared Lasers	128

3.5	Probing Atoms and Molecules with Low-Energy Photoelectrons by Strong-Field Ionization	135
3.6	Laser-Induced Rotational and Vibrational Wave Packets of Molecules	138
3.7	Strong-Field Ionization of Molecules	148
	Notes and Comments	158
	Exercises	158
	References	159
4	Rescattering and Laser-Induced Electron Diffraction	164
4.1	Introduction	164
4.2	Derivation of the QRS Theory for High-Energy ATI Electrons	165
4.3	Extracting Structure Information from Experimental HATI Spectra	176
4.4	LIED for Ultrafast Self-Imaging of Molecules: Theory	178
4.5	Experimental Demonstration of Dynamic Imaging: LIED and Other Methods	184
	Notes and Comments	196
	Exercises	197
	References	197
5	Fundamentals of High-Order Harmonic Generation	200
5.1	Introduction	200
5.2	Theory of High-Order Harmonic Generation by an Atom	201
5.3	QRS Theory	209
5.4	Phase Matching and Propagation of HHG in the Gas Medium	213
5.5	Dependence of HHG Spectra on Macroscopic Conditions	223
	Notes and Comments	232
	Exercises	232
	References	233
6	Applications of High-Order Harmonics: HHG Spectroscopy and Optimization of Harmonics	236
6.1	Studies of High-Order Harmonic Generation from Linear Molecules	236
6.2	High-Harmonics Spectroscopy from Polyatomic Molecules and Dynamically Evolving Targets	252
6.3	Routes to Optimizing Intense HHG	271
	Notes and Comments	286
	Exercises	286
	References	287
7	Generation and Characterization of Attosecond Pulses	292
7.1	Introduction	292
7.2	APTs	292
7.3	Temporal Information Extracted from APT Photoionization Experiments	298
7.4	Generation of IAPs	306
7.5	Characterization of IAPs	312

7.6 Probing Time Delay in Atomic Photoionization Using an IAP	326
Notes and Comments	340
Exercises	341
References	342
8 Probing Electron Dynamics with Isolated Attosecond Pulses	346
8.1 Description of Electron Dynamics and Measurements	346
8.2 Attosecond Transient Absorption Spectroscopy	355
8.3 General Features of ATA Spectra for Atoms below the First Ionization Threshold	358
8.4 ATA Spectrogram for Autoionizing States	362
8.5 Propagation of ATA Spectra in the Gas Medium	371
8.6 ATA Spectroscopy for Small Molecules	372
8.7 Elements of Probing Attosecond Electron Dynamics and Wave-Packet Retrieval	378
8.8 Probing Attosecond Electron Dynamics of Complex Molecules	384
Notes and Comments	387
Exercises	387
References	388
<i>Appendix Constants, Conversion Factors, Atomic Units and Useful Formulae</i>	390
A.1 Useful Constants	390
A.2 Energy Conversion Factors	390
A.3 Momentum, Wavelength, and Energy	390
A.4 Atomic Units (au): $e = \hbar = m = 1$	390
A.5 Shorthand Notations	391
A.6 Lasers	391
A.7 Oscillator Strength and Spontaneous Emission Rates	391
A.8 Pressure	391
<i>Further Reading</i>	392
<i>Solutions for Selected Problems</i>	394
<i>Index</i>	401
