

Contents

<i>Preface</i>	<i>xi</i>
<i>Acknowledgments</i>	<i>xiii</i>
1. Basics	1
1.1 Nuclear Size and Constituents	1
1.2 Fundamental Forces	2
1.3 Nuclear Mass	3
1.4 Equivalence of Mass and Energy	3
1.5 Periodic Table	4
1.6 Nuclear Composition and Stability	6
1.7 Nuclear Binding Energy	8
1.8 Cosmic Abundances	9
2. Nuclear Transformations	12
2.1 Introduction	12
2.2 Spontaneous Nuclear Transformations	12
2.3 Induced Nuclear Transformations	15
2.4 Induced Nuclear Transformations in the Laboratory and Nature	16
2.5 Role of Natural Radioactivity in Geodynamics and Geochronology	17
2.6 Statistical Aspect of Radioactivity	18
2.7 Binomial Distribution for Radioactive Disintegrations	21
2.8 Poisson Distribution	21
3. Nucleosynthesis	23
3.1 Introduction	23
3.2 Stellar Nucleosynthesis	24
4. Isotopics	33
4.1 Introduction	33
4.2 Isotopic Abundance	33
4.3 Isotope Effect in the Nuclear and Atomic Domains	34
4.4 Notation of Isotopic Abundances	34
4.5 Mixtures of Isotopically Different Components	36

5. Radioactivity and Radiometric Dating	40
5.1 Introduction	40
5.2 Radioactive and Radiogenic Isotope Dating	43
5.3 Long-lived Parent-daughter Couples used in Radiometric Dating	48
5.4 Short-lived Parent-daughter Couples used in Radiometric Dating	53
5.5 Interpretation of t , Radioactive Decay Interval	58
5.6 Isochron Concept, Isotope Equilibration, and Closure Temperature	58
5.7 Termination of a Single Stage Growth in the Past	61
5.8 Recognition of Events Causing Isotopic Equilibration on Different Scales	63
5.9 Projection of Present Day Isotopic Composition Back in Time	64
5.10 Reservoir Ages	66
5.11 Coupling Two Different, But Chemically Identical Parent-daughter Systems	67
5.12 Concordia and Discordia	71
5.13 Coupling Two Chemically Different Decay Systems	74
5.14 Chemical and Half-life Diversity of Parent-daughter Pairs	76
5.15 Radiometric Dating by Indirect Radiogenic Effects	77
5.16 Conclusion	79
6. Mass Spectrometry and Isotope Geochemistry	80
6.1 Introduction	80
6.2 Principles of Mass Spectrometry	81
6.3 Ion Detectors	82
6.4 Sequential vs Simultaneous Detection of Ion Beams	83
6.5 Improved Mass Spectrometers	85
6.6 Types of Ion Sources Used in Isotope Geochemistry	86
6.7 Typical Commercial Mass Spectrometers Using Different Ion Sources	88
6.8 Mass Fractionation in Mass Spectrometers	91
6.9 Absolute Abundance of an Isotope	92
6.10 Sample Size Requirements	93
6.11 Mass Spectrometry vs Decay Counting	93
6.12 Accelerator Mass Spectrometer	94
7. Error Analysis	96
7.1 Introduction	96
7.2 Systematic and Random Errors	97
7.3 Measurement of Random Data	97
7.4 Population Mean and Sample Mean	98
7.5 Propagation of Measurement Uncertainties	101
7.6 Standard Deviation of the Mean of n Measurements	102
7.7 Joint Variation of Two or More Random Variables	103
7.8 Regression Analysis	105
7.9 York's Solution	106
7.10 Measure of Goodness-of-fit	109

8. Meteorites: Link between Cosmo- and Geochemistry	110
8.1 Introduction	110
8.2 Nucleocosmochronology	111
8.3 Extinct Nuclides and Formation Interval	112
8.4 Meteorites	114
8.5 Nebular condensation	117
8.6 Planetary Accretion	118
8.7 Isotope Abundances in the Solar Nebula	119
9. Chronology of Meteorite History	121
9.1 Introduction	121
9.2 Stage 1: Formation Intervals from Extinct Isotopes	124
9.3 Stages 2 through 4: Formation Ages of Meteorites	127
9.4 Rb-Sr, Sm-Nd and U-Pb Ages of Meteorites	129
9.5 Very High Precision Model Ages	131
9.6 Meteorite Ages Much Younger than 4.5 Ga	134
9.7 Stage 5: Gas Retention Ages and Post-Formational Cooling and Heating Histories	134
9.8 Stage 6: Duration of Meteorites as Small Independent Objects in Space	137
9.9 Stage 7: Terrestrial Residence Time of Meteorite Finds	139
10. Chemical Evolution of the Earth	140
10.1 Composition of Terrestrial Planets and Chondritic Meteorites	140
10.2 Energetic Processes During the Final Stages of Earth Accretion	141
10.3 Element Segregation: Some Geochemical Rules	142
10.4 Segregation of Major and Trace Elements During Melting or Igneous Processes	143
10.5 Graphical Representation of Inter-Element Variations in Compatibility	145
10.6 Melting and Crystallization Models	146
10.7 Combined Partial Melting and Recrystallization	150
10.8 Observational Constraints on the Structure and Composition of the Modern Mantle	151
10.9 Earth as a Large Geochemical System	155
10.10 Elemental Chemistry of Mid-Ocean-Ridge Basalts, Ocean-Island Basalts and Continental Crust	157
11. Chronology of Earth History	161
11.1 Introduction	161
11.2 Early Siderophile-Lithophile Segregation and Timing of Core Formation	163
11.3 Early Lithophile-Atmophile Separation and Timing of the Primitive Atmosphere	165
11.4 Lithophile-Lithophile Separation and Timing of the Early Crust	168
11.5 ^{142}Nd Evolution in the Earth's Mantle	171
11.6 ^{143}Nd Evolution in the Earth's Mantle	172
11.7 ^{87}Sr Evolution in the Earth's Mantle	175
11.8 Coupling Neodymium and Strontium Data	176
11.9 ^{206}Pb , ^{207}Pb Evolution in the Earth's Mantle	180

x)	Contents
11.10 Evolution of ^{176}Hf in the Earth's Mantle	182
11.11 Evolution of ^{187}Os in the Earth's Mantle	182
11.12 Evolution of Strontium and Neodymium Isotope Ratios in Seawater	183
11.13 Magma Sources in the Mantle	185
11.14 Evolution of Radioactive Daughter Isotopes	188
11.15 Giant Impact Hypothesis	191
References	192
Index	203
