

## Index

- 3D-Var, 216–17  
4D-Var, 217–19
- Aberdeen, Maryland, mission to, 193  
adjoint model, 218  
adjustment of initial conditions, *see* initialisation  
Advanced Microwave Sounding Unit, *see* satellite instruments  
advection equation, 86–7  
aerological observations, 97  
analysis cycle, 214  
Antoniou, A., 154  
applications of NWP, 230–1  
Arakawa, A., 65, 84, 87, 88  
arms race, 13, 183  
Árnason, G., 143  
Ashford, Oliver M., 10, 13, 14, 17, 23, 25, 243, 254, 259  
Asselin, R., 175  
Assmann, Richard, 98  
astronomical prediction, 7, 9  
atmospheric balance, 137–40  
atmospheric fronts, 4, 245  
atmospheric predictability, 27, 231  
atmospheric spectrum, 2, 47–62  
atmospheric tides, 47, 55, 244  
atmospheric turbulence, 12, 30
- Bachelor, G. F., 12  
background field, 214, 215  
background field errors, covariance matrix of, 215, 216, 217, 218  
Baer, F., 144  
balance equation  
  ellipticity criterion, 143  
  linear, 53, 143, 191, 217  
  nonlinear, 143, 200  
balance ratio, 176  
balanced fast motion, 152  
balanced initial conditions, *see* initial conditions, balanced  
balloon days, *see* international aerological days  
balloon observations, 98  
balloons, manned, 97  
baroclinic instability, 182, 184, 199  
baroclinic models, 199–202  
barotropic vorticity equation, 190  
  graphical integration of, 198  
  integration of, 190–6  
  manual solution of, 186  
  operational use of, 196–9  
Bayreuth, surface pressure at, 171  
Bedient, Art, 200  
Bengtsson, Lennart, 224  
Benjamin, Stan, 156  
Benson Observatory, 12, 17, 245  
Bergeron, Tor, 123  
Bergeron, unit of tendency, 123  
Bergthorsson, P., 199, 214  
Besançon, George, 98  
Birchfield, G. E., 201  
Bjerknes, Vilhelm  
  and frontal theory, 245  
  error in equations, 6, 15  
  graphical method, 6  
  in Leipzig, 7, 15  
  manifesto, 5, 29  
  scientific forecasting, 4–10  
  *Statics* and *Kinematics*, 9, 39, 46, 104  
  synoptic charts, 9, 44, 104–9  
Bolin, Bert, 143  
boundary condition at Earth's surface, 42  
boundary value problems, 81  
Brathseth, Arne, 215  
Brillouin, M., 57  
Brunt, David, 13, 16  
Bubnová, Radmila, 157  
Buizza, Roberto, 241  
Bulirsch–Stoer method, 79, 150  
Bushby, Fred, 204, 220, 228  
Bushby–Timpson ten-level model, 205, 220, 228
- C-grid, 67, 71  
Cambridge University Press, 17, 25  
Cartwright, D. E., 31, 55  
CFL criterion, 3, 71, 85–7, 184, 188, 202

- chaos theory, 27, 231–4  
 Chapman, Sydney, 10, 17, 46, 55, 260  
 Charney, Fjørtoft, von Neumann forecast, *see* ENIAC integrations  
 Charney, J. G., 185–7  
   and Richardson, 196, 203  
   and Rossby, 184  
   baroclinic instability, 182, 184, 199  
   boundary conditions, 229  
   filtered equations, 138, 187  
   initialisation, 143  
   physical basis for numerical prediction, 186  
   scale analysis, 122, 189  
 Charney–Phillips grid, 90  
 Charnock, Henry, 10  
 climate modelling, 27, 31, 206–8
