Accuracy, 48–61, 187, 372
Acoustic intensity level, 807
Additive Schwarz procedure, 654–9
Adiabatic wall, 206
Advancing front methods (AFM), 601–6
Atkin’s algorithm, 580
Albedo, 876, 892
Algebraic grid generator, 543–61, 579
Algebraic Reynolds stress model, 702–3
Alternating direction implicit (ADI), 66, 72–3, 141, 173, 522
Amplification factor, 70, 78
Approximate factorization, 73–5, 141, 175
Arbitrary Lagrangian-Eulerian methods, 912, 914, 930
Arc-length method, 571
Arnoldi process, 385
Arrhenius law, 737
Artificial compressibility, 106, 107, 126
Artificial viscosity (diffusion), 123–125, 127, 139, 140, 368, 371
Artificial viscosity flux limiters, 195
Assembly of stiffness (diffusion, viscosity) matrix, 212–5
Assembly of source vector, 212–5
Axisymmetric cylindrical heat conduction, 335–6
Back scatter, 707
Backward (upwind) differencing, 7, 46
Baldwin-Lomax model, 702–3
Banach space, 256
Base functions, see interpolation functions
Beam-Warming method, 85–6, 141, 156, 169–76, 524
Bernstein polynomials, 581, 583
Beta spline, 582, 583
Bezier curve, 581–586
Bezier patches, 583
BGK model, 940, 941
Biharmonic equation, 415
Black hole accretion, 975–76
Boltzmann equation, 940–941
Boolean matrix, 246, 313
Boolean operators, 609
Dirichlet, 17–20, 38–41
for Euler and Navier-Stokes system of equations, 197–207
mixed, Robin, 38–41
well-posedness, 98, 201
Boundary element methods, 245, 532–535
Bowyer algorithm, 597–600
Box (tophat) function, 707
Burger’s Equation, 87–90, 355, 402–404, 502
C0, C1, Cm continuity, 307–308
Cathull-Rom form, 582, 584
Cauchy/Robin boundary conditions, 39, 317
Cebeci-Smith model, 694
Cell area (Jacobian) method, 570
Cell-centered average scheme, 225–7
Cell-centered control volume, 223–5
Central difference, 6, 141, 371
CFL (Courant) number, 77, 78, 368
Characteristic Galerkin method (CGM), 347, 445–6
Characteristic variables, 134–5, 205
Chebyshev polynomials, 473–5, 645, 776, 788, 931
Chemical equilibrium equations, 714–54
Completeness, 307
Compatibility relations, 132
Compressibility condition, 354
Compressibility effects, 703–5
Compression corner flow, 464
Condition number, 256, 257
Conduction-radiation ratio, 876, 906
Conforming elements, 308
Conjugate gradient method (CGM), 337, 384
Consistency, 61

More information
Consistent mass matrix, 359

Continuous space-time (CST), 327

Control functions, 567, 579, 618–627

Control function, 617–27

Control surfaces (volumes), 12–19, 219–32, 234–5, 501–9

Convection-diffusion equation, 369

Convection-dominated flow, 347–8

Convection Jacobians, 131, 170, 181, 989–94

Convection matrix, 355, 370

Convergence, 62, 258, 259, 306–8

Convex hull, 599

Coordinate transformation, 94–8

Cost function, 891

Coupled Eulerian-Lagrangian methods, 246, 535–8, 790

Courant (CFL) number, 368, 372, 374

Covariant metric tensor, 563

Crank-Nicolson scheme, 71–5, 81, 108, 356, 362, 446–7

Cubic spline, 535–7

Curl of three-dimensional vorticity transport equations, 118, 417

Curvature tensor, 574

Damkohler number, 452, 743, 744, 784

Deflection angle, 467

Delaunay-Voronoi methods (DVM), 591–600

Courant (CFL) number, 368, 372, 374

Covariant metric tensor, 563

Crank-Nicolson scheme, 71–5, 81, 108, 356, 362, 364

Cubic spline, 535–7

Curvature tensor, 574

Domain vertex methods, 547–45

Double asymptotic approximation, 373

Driven cavity flow, 465–7

DuFort-Frankel methods, 71, 522

Dulquist and Bjorck scheme, 56

Dust infall, 980–3

Eckert number, 881

Eddy (turbulent) viscosity, 710

Effectivity index, 646

Eigenvalues, 132, 143, 179, 204, 208

positive, 204, 207

negative, 204, 207

Eigenvectors, 133, 134

Element-by-element (EBE) method, 340, 381

Elliptic equations, 31–3, 63–7, 98, 561, 572

Elliptic grid generator, 561–8, 618

Emissive power, 851–2

Energy dissipation range, 708

Energy norm error, 255, 630

Ensemble average, 691

Entropy condition, 151

Entropy controlled instability, 839–44

Entropy mode acoustics, 813–8

Entropy variables, 437, 441–4

Entropy variable Jacobians, 437, 438–40

Gauss elimination, 67

Gauss-Seidel iteration, 65

generalized minimal residual (GMRES) method, 380, 752

Jacobi iteration, 65

Newton-Raphson method, 380, 752

Runge-Kutta method, 90, 168

Thomas algorithm, 76

triangular matrix algorithm (TDMA), 76

Error estimates, 254–9, 645

Error coefficient vector, 385

Error indicator, 628–30, 645

Errors

iterative, 65

round-off, 65

sources of, 91–94

truncation, 46–62

Essentially nonoscillatory (ENO) schemes, 163–5

Euler equations, 129–166, 367–91

Eulerian differences, 535

Explicit scheme, 68–71, 77–81, 167, 365, 366

Extrapolation methods, 201

FDV parameters (variation parameters), 181–185, 448–59, 784

Flow functions, 812, 836

Filtering functions, 706

Fine grain parallelism, 666

Finite difference operators, 48–61
