### PART I NUMBERS

<b>1 Mathematical induction</b>	3
Mathematical induction (qns 1–8)	3
Historical Note	6
Answers and comments	7
<b>2 Inequalities</b>	9
Positive numbers and their properties (qns 1–29)	9
Summary: Properties of order	12
Arithmetic mean and geometric mean (qns 30–39)	13
Completing the square (qns 40–42)	15
The sequence $(1 + 1/n)^n$ (qns 43–49)	15
$n$ th roots (qns 50, 51)	16
Summary: Results on inequalities	17
Absolute value (qns 52–66)	17
Summary: Results on absolute value	19
Historical Note	19
Answers and comments	21
<b>3 Sequences: A first bite at infinity</b>	28
Introduction (qns 1–3)	28
Monotonic sequences (qns 4)	30
Bounded sequences (qns 5–7)	30
Subsequences (qns 8–16)	32

*Contents*

Sequences tending to infinity (qns 17, 18)	35
Archimedean order and the integer function (qns 19–23)	36
Summary: The language of sequences	38
Null sequences (qns 24–47)	38
Summary: Null sequences	46
Convergent sequences and their limits (qns 48–60)	47
Boundedness of convergent sequences (qns 61–63)	50
Quotients of convergent sequences (qns 64–69)	50
d’Alembert’s ratio test (qns 70–74)	52
Convergent sequences in closed intervals (qns 75–80)	53
Intuition and convergence (qns 81–83)	55
Summary: Convergent sequences	57
Historical Note	58
Answers and comments	61
<b>4 Completeness: What the rational numbers lack</b>	<b>69</b>
The Fundamental Theorem of Arithmetic (qns 1–3)	69
Dense sets of rational numbers on the number line (qns 4–10)	70
Infinite decimals (qns 11–17)	71
Irrational numbers (qns 18–21)	73
Infinity: countability (qns 22–30)	73
Summary	76
The completeness principle: infinite decimals are convergent (qns 31, 32)	77
Bounded monotonic sequences (qns 33–36)	78
$n$ th roots of positive real numbers, $n$ a positive integer (qns 37–41)	79
Nested closed intervals (qns 42)	81
Convergent subsequences of bounded sequences (qns 43–47)	81
Cluster points: the Bolzano–Weierstrass theorem (qns 48–54)	82
Cauchy sequences (qns 55–58)	83
Least upper bounds (sup) and greatest lowest bounds (inf) (qns 59–82)	85
Upper bounds and greatest terms (qns 59–61)	85
Least upper bound (sup) (qns 62–66)	86
Lower bounds and least members (qns 67–70)	87
Greatest lower bound (inf) (qns 71–78)	88
sup, inf and completeness (qns 79–82)	88
lim sup and lim inf (qns 83–84)	90
Summary: Completeness	91

<i>Contents</i>	vii
Historical Note	91
Answers and comments	95
<b>5 Series: Infinite sums</b>	103
Sequences of partial sums (qns 1–10)	103
The null sequence test (qns 11–13)	106
Simple consequences of convergence (qns 14–22)	106
Summary: Convergence of series	107
Series of positive terms	108
First comparison test (qns 23–29)	108
The harmonic series (qn 30)	109
The convergence of $\sum 1/n^\alpha$ (qns 31, 32)	109
Cauchy's $n$ th root test (qns 33–39)	110
d'Alembert's ratio test (qns 40–50)	111
Second comparison test (qns 51–55)	112
Integral test (qns 56–61)	113
Summary: Series of positive terms	115
Series with positive and negative terms	116
Alternating series test (qns 62–65)	116
Absolute convergence (qns 66–70)	117
Conditional convergence (qn 71)	118
Rearrangements (qns 72–77)	118
Summary: Series of positive and negative terms	120
Power series	121
Applications of d'Alembert's ratio test and Cauchy's $n$ th root test for absolute convergence (qns 78–90)	121
Radius of convergence (qns 91–101)	122
Cauchy–Hadamard formula (qns 102–107)	124
The Cauchy product (qns 108–113)	125
Summary: Power series and the Cauchy product	127
Historical Note	127
Answers and comments	130
<b>PART II FUNCTIONS</b>	
<b>6 Functions and continuity: Neighbourhoods, limits of functions</b>	141
Functions (qn 1)	141
The domain of a function	141
The range and co-domain of a function (qns 2–4)	142
Bijections and inverse functions (qns 5–6)	143
Summary: Functions	143

viii	<i>Contents</i>
Continuity (qns 7–11)	144
Definition of continuity by sequences (qns 12–18)	145
Examples of discontinuity (qns 19, 20)	146
Sums and products of continuous functions (qns 21–31)	147
Continuity in less familiar settings (qns 32–35)	148
A squeeze rule (qns 36, 37)	149
Continuity of composite functions and quotients of continuous functions (qns 38–55)	149
Summary: Continuity by sequences	152
Neighbourhoods (qns 56–63)	152
One-sided limits	157
Definition of one-sided limits by sequences (qns 73–82)	157
Definition of one-sided limits by neighbourhoods (qns 83–85)	159
Two-sided limits	160
Definition of continuity by limits (qns 86–92)	160
Theorems on limits (qns 93–99)	161
Limits as $x \rightarrow \infty$ and when $f(x) \rightarrow \infty$ (qns 100, 101)	163
Summary: Continuity by neighbourhoods and limits	163
Historical Note	164
Answers	167
<b>7 Continuity and completeness: Functions on intervals</b>	<b>176</b>
Monotonic functions: one-sided limits (qns 1–7)	176
Intervals (qns 8–11)	177
Intermediate Value Theorem (qns 12–21)	179
Inverses of continuous functions (qns 22–28)	180
Continuous functions on a closed interval (qns 29–36)	182
Uniform continuity (qns 37–45)	184
Extension of functions on $\mathbb{Q}$ to functions on $\mathbb{R}$ (qns 46–48)	186
Summary	188
Historical Note	189
Answers	191
<b>8 Derivatives: Tangents</b>	<b>197</b>
Definition of derivative (qns 1–9)	197
Sums of functions (qns 10, 11)	199
The product rule (qns 13–16)	199
The quotient rule (qn 17)	200
The chain rule (qn 18)	200
Differentiability and continuity (qns 12, 9–25)	201

Cambridge University Press

Table of Contents

[More information](#)

<i>Contents</i>	ix
Derived functions (qns 26–34)	205
Second derivatives (qns 35–38)	207
Inverse functions (qns 39–45)	208
Derivatives at end points (qn 46)	209
Summary	210
Historical Note	210
Answers	213
<b>9 Differentiation and completeness: Mean Value Theorems, Taylor’s Theorem</b>	218
Rolle’s Theorem (qns 1–11)	218
An intermediate value theorem for derivatives (qn 12)	220
The Mean Value Theorem (qns 13–24)	220
Cauchy’s Mean Value Theorem (qn 25)	224
de l’Hôpital’s rule (qns 26–30)	224
Summary: Rolle’s Theorem and Mean Value Theorem	226
The Second and Third Mean Value Theorems (qns 31–34)	227
Taylor’s Theorem or nth Mean Value Theorem (qns 35, 36)	228
Maclaurin’s Theorem (qns 37–46)	229
Summary: Taylor’s Theorem	232
Historical Note	233
Answers	236
<b>10 Integration: The Fundamental Theorem of Calculus</b>	244
Areas with curved boundaries (qns 1–5)	244
Monotonic functions (qns 6–9)	247
The definite integral (qns 10, 11)	249
Step functions (qns 12–15)	250
Lower integral and upper integral (qns 16–22)	252
The Riemann integral (qns 23–25)	254
Summary: Definition of the Riemann integral	255
Theorems on integrability (qns 26–36)	256
Integration and continuity (qns 37–44)	259
Mean Value Theorem for integrals (qn 45)	261
Integration on subintervals (qns 46–48)	261
Summary: Properties of the Riemann integral	261
Indefinite integrals (qns 49–53)	262
The Fundamental Theorem of Calculus (qns 54–56)	263
Integration by parts (qns 57–59)	264
Integration by substitution (qn 60)	265

x	<i>Contents</i>
Improper integrals (qns 61–68)	265
Summary: The Fundamental Theorem of Calculus	267
Historical Note	267
Answers	270
<b>11 Indices and circle functions</b>	<b>279</b>
Exponential and logarithmic functions	279
Positive integers as indices (qns 1–3)	279
Positive rationals as indices (qns 4–7)	280
Rational numbers as indices (qns 8–17)	280
Real numbers as indices (qns 18–24)	282
Natural logarithms (qns 25–31)	283
Exponential and logarithmic limits (qns 32–38)	284
Summary: Exponential and logarithmic functions	285
Circular or trigonometric functions	286
Length of a line segment (qns 39–42)	287
Arc length (qns 43–48)	287
Arc cosine (qns 49, 50)	289
Cosine and sine (qns 51–58)	289
Tangent (qns 59–62)	290
Summary: Circular or trigonometric functions	291
Historical Note	292
Answers	294
<b>12 Sequences of functions</b>	<b>300</b>
Pointwise limit functions (qns 1–14)	301
Uniform convergence (qns 15–19)	303
Uniform convergence and continuity (qns 20–23)	304
Uniform convergence and integration (qns 24–31)	305
Summary: Uniform convergence, continuity and integration	307
Uniform convergence and differentiation (qns 32–34)	308
Uniform convergence of power series (qns 35–44)	309
The Binomial Theorem for any real index (qn 45)	312
The blancmange function (qn 46)	312
Summary: Differentiation and the $M$ -test	316
Historical Note	316
Answers	318
