10. Read through the whole text to check it makes sense before transferring your answers to the answer sheet.

Follow the exam instructions, using the advice to help you.

Hedgehogs

A hedgehog is a small mammal characterised by the sharp spines which cover its body. Hedgehogs are found in many different parts of the world, none is native to either America or Australia. All species of hedgehog share the ability to roll into a tight ball when attacked, that their spines point outwards. The effectiveness of this as a defence mechanism, depends, of course, the number of spines the hedgehog has. Some desert hedgehogs have evolved to carry less weight, and consequently, they have fewer spines and are thus more likely to attempt to run into their attacker, using their ball rolling ability as a last resort.

Hedgehogs are primarily nocturnal and sleep for much of the day, either under cover of bushes in a hole in the ground. Despite the that all hedgehogs can hibernate, not all choose to do so; in suitable conditions, some will stay awake all year round.

Follow-up

Did you remember to read through the text at the end to make sure it all made sense?
