*Preface*  

## 1 Errors in Computation  

1.1 Introduction  

1.2 Floating Point Representation of Number  

1.3 Binary Numbers  

1.3.1 Binary number representation in computer  

1.4 Significant Digits  

1.5 Rounding and Chopping a Number  

1.6 Errors due to Rounding/Chopping  

1.7 Measures of Error in Approximate Numbers  

1.8 Errors in Arithmetic Operations  

1.9 Computation of Errors Using Differentials  

1.10 Errors in Evaluation of Some Standard Functions  

1.11 Truncation Error and Taylor’s Theorem  

Exercise 1  

References and Some Useful Related Books/Papers  

## 2 Linear Equations and Eigenvalue Problem  

2.1 Introduction  

2.2 Ill-conditioned Equations  

2.3 Inconsistency of Equations  

2.4 Linear Dependence  

2.5 Rank of a Matrix  

2.6 Augmented Matrix  

2.7 Methodology for Computing $A^{-1}$ by Solving $Ax = b$  

2.8 Cramer’s Rule  

2.9 Inverse of Matrix by Cofactors  

2.10 Definitions of Some Matrices  

2.11 Properties of Matrices  

2.12 Elementary Transformations  

2.13 Methods for Solving Equations (Direct Methods)  

2.13.1 Gaussian elimination method (Basic)  

2.13.2 Gaussian elimination (with row interchanges)
## Table of Contents

### 2.14 LU Decomposition/Factorisation

- 2.14.1 By Gaussian elimination method
- 2.14.2 Crout’s method
- 2.14.3 Cholesky’s method
- 2.14.4 Reduction to PA = LU

### 2.15 Gauss–Jordan (or Jordan’s) Method

### 2.16 Tridiagonal System

### 2.17 Inversion of Matrix

### 2.18 Number of Arithmetic Operations in Gaussian Elimination

### 2.19 Eigenvalues and Eigenvectors

#### 2.20 Power Method to Find Dominant Eigenvalue/Latent Root

- 2.20.1 To find smallest eigenvalue by power method
- 2.20.2 Determination of subdominant eigenvalues

### 2.21 Iterative Methods

#### 2.21.1 Gauss–Jacobi method
#### 2.21.2 Gauss–Seidel method

### 2.22 Condition for Convergence of Iterative Methods

### 2.23 Successive Over-Relaxation (S.O.R.) Method

### 2.24 Norms of Vectors and Matrices

#### 2.24.1 Vector norm
#### 2.24.2 Matrix norm
#### 2.24.3 Forms of matrix norm
#### 2.24.4 Compatibility of matrix and vector norms
#### 2.24.5 Spectral norm

### 2.25 Sensitivity of Solution of Linear Equations

Exercise 2

References and Some Useful Related Books/Papers

---

### 3 Nonlinear Equations

#### 3.1 Introduction

#### 3.2 Order of Convergence of Iterative Method

#### 3.3 Method of Successive Substitution

#### 3.4 Bisection Method (Method of Halving)

#### 3.5 Regula–Falsi Method (or Method of False Position)

#### 3.6 Secant Method

#### 3.7 Convergence of Secant/Regula–Falsi Methods

#### 3.8 Newton–Raphson (N–R) Method

- 3.8.1 Evaluation of some arithmetical functions

---
## Contents

3.8.2 Convergence of Newton–Raphson method 
3.8.3 Convergence when roots are repeated 
3.9 Simultaneous Equations 
3.9.1 Method of successive substitution 
3.9.2 Newton–Raphson method 
3.10 Complex Roots 
3.11 Bairstow’s Method 
Exercise 3 
References and Some Useful Related Books/Papers 

4 Interpolation 
4.1 Introduction 
4.2 Some Operators and their Properties 
4.2.1 Linearity and commutativity of operators 
4.2.2 Repeated application and exponentiation of operators 
4.2.3 Interrelations between operators 
4.2.4 Application of operators on some functions 
4.3 Finite Difference Table 
4.3.1 Propagation of error in a difference table 
4.4 Error in Approximating a Function by Polynomial 
4.4.1 Justification for approximation by polynomial 
4.5 Newton’s (Newton–Gregory) Forward Difference (FD) Formula 
4.5.1 Error in Newton’s FD formula 
4.6 Newton’s (Newton–Gregory) Backward Difference (BD) Formula 
4.7 Central Difference (CD) Formulae 
4.7.1 Gauss’s Backward (GB) formula 
4.7.2 Gauss’s Forward (GF) formula 
4.7.3 Stirling’s formula 
4.7.4 Bessel’s formula 
4.7.5 Everett’s formula 
4.7.6 Steffensen’s formula 
4.7.7 Comments on central difference formulae 
4.8 General Comments on Interpolation 
4.9 Lagrange’s Method 
4.10 Divided Differences (DD) 
4.10.1 Divided differences are independent of order of arguments 
4.10.2 Newton’s Divided Difference (DD) formula 
4.11 Lagrange’s Formula Versus Newton’s DD Formula
# Contents

4.12 Hermite’s Interpolation 191

Exercise 4 194

References and Some Useful Related Books/Papers 197

5 Numerical Differentiation 198

5.1 Introduction 198

5.2 Methodology for Numerical Differentiation 198

5.3 Differentiation by Newton’s FD Formula 199

5.3.1 Error in differentiation 200

5.4 Differentiation by Newton’s BD Formula 202

5.5 Differentiation by Central Difference Formulae 208

5.5.1 At tabular points 208

5.5.2 At non-tabular points 211

5.6 Method of Undetermined Coefficients 216

5.7 Comments on Differentiation 218

5.8 Derivatives with Unequal Intervals 218

5.8.1 Forward Difference formulae 219

5.8.2 Backward Difference formulae 220

5.8.3 Central Difference formulae 221

Exercise 5 221

References and Some Useful Related Books/Papers 222

6 Numerical Integration 223

6.1 Introduction 223

6.2 Methodology for Numerical Integration 223

6.3 Rectangular Rule 225

6.4 Trapezoidal Rule 228

6.5 Simpson’s 1/3rd Rule 231

6.5.1 Comments on Simpson’s 1/3rd rule 234

6.6 Simpson’s 3/8th Rule 235

6.7 Weddle’s Rule 235

6.8 Open-Type Formulae 240

6.9 Newton–Cotes (or Cotes) Formulae 242

6.10 Method of Undetermined Coefficients 245

6.11 Euler–Maclaurin Formula 249

6.12 Richardson’s Extrapolation 254

6.13 Richardson’s Extrapolation 256

## Contents

11.6.1 Solution by Gauss–Seidel and Gaussian elimination 479  
11.6.2 Solution by SOR method 485  
11.6.3 Solution of elliptic equation by ADI method 489  

11.7 Methods for Solving Hyperbolic Equations 490  
11.7.1 Finite difference methods 491  
11.7.2 Explicit method 491  
11.7.3 Implicit method 492  
11.7.4 Stability analysis 493  
11.7.5 Characteristics of a partial differential equation 497  
11.7.6 Significance of characteristics 498  
11.7.7 Method of characteristics for solving hyperbolic equations 500  

11.8 Hyperbolic Equation of First Order 508  
11.8.1 Finite difference methods 510  
11.8.2 Lax–Wendroff’s method 511  
11.8.3 Wendroff’s method 514  
11.8.4 Other explicit/implicit methods 515  
11.8.5 Solving second order equation by simultaneous equations of first order 519  
11.8.6 Solution of first order hyperbolic equation by method of characteristics 521  

Exercise 11 525  
References and Some Useful Related Books/Papers 531  

12 Finite Element Method 532  
12.1 Introduction 532  
12.2 Weighted Residual Methods 533  
12.2.1 Galerkin’s method 534  
12.2.2 Least squares method 534  
12.2.3 Subdomain method 534  
12.2.4 Collocation method 535  
12.3 Non-homogeneous Boundary Conditions 540  
12.4 Variational Methods 541  
12.4.1 Functional and its variation 542  
12.4.2 Rayleigh–Ritz (or Ritz) method 543  
12.5 Equivalence of Rayleigh–Ritz and Galerkin Methods (1–D) 546  
12.6 Construction of Functional 547  
12.6.1 Preliminaries from vector calculus 548  
12.6.2 Minimum Functional Theorem (MFT) 549
### 12.6.3 Application of MFT to one-dimension problem

555

12.7 Equivalence of Rayleigh–Ritz and Galerkin Methods (2−D)

556

12.8 Pre-requisites for Finite Element Method

559

12.8.1 Shape functions

559

12.8.2 Normalised/natural coordinates

564

12.9 Finite Element Method

567

12.9.1 Ordinary differential equation

567

12.9.2 Elliptic equation

583

12.9.3 Node-wise (point-wise) assembly

598

12.9.4 Higher order elements

599

12.9.5 Element of rectangular shape

603

12.9.6 Parabolic equation (one dimension)

605

12.9.7 Parabolic equation (two dimensions)

613

12.9.8 Hyperbolic equation

616

Exercise 12

616

References and Some Useful Related Books/Papers

619

13 Integral Equations

620

13.1 Introduction

620

13.2 Fredholm Integral Equations

620

13.3 Volterra Integral Equations

621

13.4 Green’s Function

622

13.5 Solution of Differential Equation Represented by Integral and Vice-Versa

625

13.6 Reduction of Differential Equation to Integral Equation

627

13.6.1 Reduction of a BVP to Fredholm equation

628

13.6.2 Reduction of IVP to Volterra equation

630

13.7 Methods for Solving Fredholm Equations

631

13.7.1 Analytical method

632

13.7.2 Classical iterative method

637

13.7.3 Numerical method

640

13.8 Methods for Solving Volterra Equation

647

13.8.1 Numerical method

647

13.8.2 Taylor’s series method

648

13.8.3 Iterative method

650

Exercise 13

657
