CONTENTS

Introduction .......................... page vii

Chapter I. General Characters of Muscular Tissue

§ I. Types of Muscle .................. 1
Skeletal muscles of higher vertebrates, p. 2. Complex structure of skeletal muscles, p. 3. Histology of skeletal muscles, p. 4. Functional character of skeletal muscles, p. 5. Visceral muscles of higher vertebrates, p. 8

§ II. Chemistry of Muscular Tissue ...... 8

References ................................ 21

Chapter II. Chemical Changes in Active Muscle

§ I. Frog's Muscle ...................... 23

§ II. Other Types of Muscle .............. 37

References ................................ 56
Table of Contents

Chapter III. Mechanics and Theory of Muscular Contraction

§ I. Mechanics of Muscle .......................... page 59
  Free energy of excited muscle, p. 60. Realizable
  work, p. 61. Heat and tension, p. 62. Viscous-
  elastic properties of muscle, p. 64

§ II. Theories of Muscular Contraction ................ 69

§ III. Muscular Tone ................................ 73
  Tone in vertebrate skeletal muscle, p. 74. Verte-
  brate smooth muscle, p. 77. Vertebrate heart
  muscle, p. 79. Invertebrate muscle, p. 80

References ............................................. 86

Chapter IV. Effect of Environment ...................... 88

Action of electrolytes, p. 88. Action of ions on the
  heart, p. 91. Potassium, p. 93. Calcium, p. 95.
  Hydrogen ion, p. 96. Internal effects of ions, p. 98.
  Excitation and inhibition, p. 99

References ............................................. 102

Appendix .............................................. 104

Index ................................................ 105
