

CONTENTS

<i>Foreword</i> by Professor Otto Stern	page ix
INTRODUCTION	1
Chapter I. THE PRODUCTION AND MEASUREMENT OF MOLECULAR RAYS	10
<i>The Source</i> : Molecular Effusion, The Cosine Law of Molecular Effusion; <i>Intensity in the Beam</i> : Slits, Cloud Formation; <i>The Collimator Chamber</i> : Elimination of Alien Molecules—First and Second Methods; <i>Detectors</i> ; <i>Additive Detectors</i> : The Condensation Target, Chemical Targets; <i>Non-additive Detectors</i> : Manometers, Surface Ionisation Detector, Thermopile, Bolometer, Radiometer; <i>Constructional Details</i> : Adjustment, Typical Apparatus	
Chapter II: GAS KINETICS	60
<i>The Thermal Velocity of Molecules</i> ; <i>The Maxwell Distribution Law</i> : Lammert's Experiments, Eldridge's Experiments; <i>Velocity Selectors</i> ; <i>The Mean Free Path</i>	
Chapter III: PROBLEMS OF THE GAS-SOLID INTERFACE	78
<i>Scattering</i> : The Knudsen Law; <i>Reflection</i> : Specular Reflection; <i>Adsorption and Condensation</i> : Time of Adsorption, Lateral Motion, The Two-dimensional Gas Phase, Transition Phenomena, Surface Conditions	
Chapter IV: THE DIFFRACTION OF MOLECULAR RAYS	97
<i>Cross-Grating Spectra</i> ; <i>Diffraction of Molecular Rays at Crystal Surfaces</i> : Experiments of Estermann and Stern, Johnson's Experiments; <i>Reflection of Cadmium and Zinc from Rocksalt</i>	
Chapter V: THE MAGNETIC DEVIATION OF MOLECULAR RAYS	114
<i>The Field</i> : The Stern-Gerlach Field, The Rabi Field, The Hamburg Set-up; <i>Magnetic Deflection Patterns</i> ; The Stern-Gerlach Experiment, <i>Mg</i> -Values; <i>Intensity Distribution in the Deflected Beams</i> : The Case of $w_i = \frac{1}{2}$, The Case of $w_i \neq \frac{1}{2}$, Scope of the Deflection Method; <i>The μ_i-Values of the Atoms</i> : Li, Na, K; Cu, Ag, Au; Zn, Cd, Hg; Tl; Sn, Pb; Bi; O; Fe, Co, Ni; Active Nitrogen; <i>Nuclear Moments</i> ; <i>Absolute Measurements</i>	

Chapter VI: THE ELECTRIC DEVIATION OF MOLECULAR RAYS	page 154
<i>Molecular Rotation; Calculation of the Time-averaged Moment $\bar{\mu}$; Intensity Distribution in the Deflected Beam; The Case of Low Temperature; Scope of the Deflection Method; The Field; Comparative Measurements with Organic Substances</i>	
Chapter VII: CHEMICAL EQUILIBRIA. IONISATION. SPECTROSCOPIC APPLICATIONS	175
<i>Molecular Effusion: Vapour Pressure Determinations, Dissociation; Measurement of α by Beam Methods: Velocity Filter Methods, Magnetic Deflection Method; Chemical Reactions; Ionisation Potentials; Photoionisation; Hyper- fine Structure of Spectral Lines</i>	
Appendix	197
Author Index	199
Subject Index	201
