Index

acetate cancer, 33 metabolic process, 33 positron emission tomography (PET), 33 Alzheimer’s disease. See dementia amyloid brain, 76–78 computed tomography (CT), 77 heart, 78 nature of amyloidosis, 76 positron emission tomography (PET), 76–78 angiogenesis computed tomography (CT), 52 magnetic resonance imaging (MRI), 52 metabolic process, 52 positron emission tomography (PET), 52–53 Single Photon Emission Computed Tomography (SPECT), 52–53 ultrasound, 52 apoptosis cardiology, 49 magnetic resonance imaging (MRI), 47 metabolic process, 47 neurology, 49 oncology, 49–50 optical imaging, 47 positron emission tomography (PET), 47–50 stem cell therapy, 66, 69 cancer. See also hypoxia acetate, 33 angiogenesis, 52, 53 apoptosis, 49–50 breast, 49 cell surface receptors, 43 cerebral, 36 choline, 33 glucose, 32–33 head and neck, 36, 49 leukemia, 69 lung, 36, 49 lymphoma, 36, 49, 69 magnetic resonance imaging (MRI), 68 neuroendocrine, 59 positron emission tomography (PET), 32–33, 36–37, 49–50 reporter gene imaging, 55, 58, 59, 60 cardiovascular pathology, 49, 78 cell surface receptor ligands affinuity, 45 antibodies, 43–44 metabolic process, 43 oligopeptides, 45 positron emission tomography (PET), 45 receptor density, 45 small molecules, 44 specificity, 45 cellular necrosis, 47, 48, 49 cerebral infarction, 14 choline cancer, 33 metabolic process, 33 positron emission tomography (PET), 33 computed tomography (CT). For applications, see under amyloid; angiogenesis; perfusion; stroke attenuation, 1–3 axial slice, 3 basic process, 1 contrast resolution, 1 dual-energy (DECT), 5 fan beam, 3 hardware, 3, 5–6 helical, 3–4 image reconstruction, 6–7 multislice (MSCT), 4 radiation dose, 9–10 spatial resolution, 1, 8–9 dementia, 77–78 electron paramagnetic resonance (EPR), 39–40 positron emission tomography (PET), 78 electron paramagnetic resonance (EPR), 39–40 magnetic resonance spectroscopy (MRS), 39 metabolic process, 39 positron emission tomography (PET), 40–41 tissue oxygen direct measurement, 39 magnetic resonance imaging (MRI). For applications, see under angiogenesis; apoptosis; cancer; perfusion; stem cell therapy; stroke basic process, 11 diffusion weighted (DW), 14 dynamic contrast-enhanced (DCE), 14 echo planar imaging sequence (EPI), 13 fast spin echo sequence (FSE), 13–14 gradient echo sequence, 12–13 hardware, 11 image contrast, 12 Larmor frequency, 11 safety issues, 15 spin echo sequence, 13 T1 and T2 time constants, 11–12 magnetic resonance spectroscopy (MRS), 14–15. See also hypoxia molecular imaging, defined, ix nuclear medicine Becquerels, 19 biodistribution, 23 Curies, 19 dose calibrator, 19 gamma camera, 20 indicator dilution, 23 left–right comparisons, 23–24 partial volume effect, 24 Patlak graphical analysis, 25–26 planar attenuation correction, 24 positron emission tomography (PET), 21–22. For applications, see under acetate; amyloid; angiogenesis; apoptosis; cancer; cell surface receptor ligands; choline; dementia; glucose; hypoxia; reporter gene imaging; stem cell therapy; stroke simplified kinetic analysis, 25
