INDEX

(The numbers refer to the pages. Those in italics refer to Part II)

Absolute impression, 256–261, 300, 301, 27, 24
threshold (see Threshold)
Anesthesia, 13
Anocimeter, Politzer’s, 237, 48, 49
Act of volition, 216, 282, 332
Acuity, sensory, 233–243, 47–52, 100
algesic, 240
auditory, 237, 238
bibliography, 243
gustatory, 239
motor (kinesthetic), 241
olfactory, 238, 239
tactual, 239, 240
thermal, 240
visual, 234–237
Adaptation, auditory, 242, 243, 277, 102
in determining threshold, 194
labyrinthine, 242
in mental work, 183, 184
muscular, 174, 242 (see also Motor
attunement)
olfactory, 243
sensory, 241
tactual, 17
thermal, 15–17, 79, 80
visual, 74, 91, 241, 242, 245; to
twilight, 85–86, 94, 97, 47
Aesthetsmometer, 178 (see also Threshold,
spatial)
Aesthetics, 306–308
After-sensations (see under Auditory,
Visual, etc., Sensations)
Age influence, on size-weight illusion, 207; on
learning, 165, 169; on
range of audible pitch, 35; on
reactions, 130; on area of sensibility
to taste, 124
Algesic acuity (see under Pain)
Allochiria, 220
Anosmia, 108
Apprehension, span of, 321, 323, 63–66
Appunni’s Tommesser, 92, 94
Aristotle’s experiment, 224, 107, 104
Association of colours with names, 47
in feeling, 387
in harmony, 55
mediate, 159, 160
in memory, 136–137
and motor attunement, 212
related, 156, 157
Association of colours (continued)
in ‘repressed’ experiences, 5
retro-active and remote, 154–156
unconscious, 157, 158
Associations, age, influence of, 163–164;
classification, 142, 143, 5, 6
summation effects in rational learning, 168
times, 133
wrong, i.e. active substitution, 160; passive, 160
Atropin, and fluctuation of visual sensations, 319, 320
and visual perception of size, 280–281
Attention, 315–323, 63–66, 113, 114
bibliography, 323
in binocular rivalry, 267
in ‘complication’ experiments, 316
distraction of, 330, 321
effect of, on apparent order of presenta-
tions, 315; on their duration, 302; on rhythm, 301
fluctuations of, 318–320, 113, 114
in learning, 166
measurement of, 327, 323
presentation order, 315
in reactions, 126, 127, 129, 131
in sensory cortical lesions, 317, 321, 322
span of apprehension, 324, 67–66
Attunement (see under Motor Sensations)
Audiles, 139
Auditory sensations, 19–59, 64, 45–56, 92–99, primary, 114, 115
acuity, 237, 238, 245, 48–52
adaptation, 242, 243, 102
after-sensations, 31, 32
beats, 35–38, 41, 97–99; binaural, 38, 59
beat tones, 51
bibliography, 39, 59
binaural experience, 273–279, 291 (see also under Binaural)
combination tones, 40–45, 98, 99
conduction of sounds to inner ear, 19;
from ear to ear, 20, 38, 50, 275
consonance and dissonance, 27, 46,
65; theories of, 46, 57–55
difference tones (see under Combination
tones)
INDEX

Auditory sensations (continued)
disclosure, binaural, 49; uniaural, 49
discrimination of, 35, 114, 245, 246, 252
fatigue of, 242, 243
fluctuation in, 318, 319, 113
Fourier’s theorem, 21, 23
hearing; theories of (Ehrengärtner), 53; (Ewald), 46–58; (Helmholtz), 23, 48–56; (Meyer), 58
imagery, 126–126, 60–69
intensity, change of, confused with change of pitch, 30, 33, 278; physical basis of, 49; of simultaneous tones, 33, 50; threshold of, 30, 257, 238, 49
interruption tones, 44, 45, 51
intertones, 35–38, 43, 50, 54, 58
middle ear, function of, 19, 20, 23, 24
noises, 21, 24–26, 53, 57, 94; localisation of, 277 (see also below), 70, 28
overtones, 28–30, 42 (see also Timbre)
phase influence, on localisation of sound, 274, 25, 30; on tonal experience, 59, 51, 48
pitch, absolute determination of, association with names, 46, 47; by birds, 47; by children, 47; difference of, 35, 47, 53, 114, 238, 246; physical basis of, 19; range of audible, 34, 90
resonance, 21–23, 41, 48–50, 63
rhythm, 301, 302, 110, 111
summation tones (see under Combination tones)
timbre, change of, confused with change of pitch, 29, 30; important in localisation of sound, 276, 277; meaning of, 26, 31; physical basis of, 19; relation of overtones to, 28–30, 94, 95
tone character, 37, 33, 95
tone gaps, 49
tones, nomenclature, 26–28; purity of, 28, 55, 112; relation to noise, 24–26, 34, 52; relation to one another, 45, 46, 95
variation tones, 43
Weber’s law, 244–246, 23
Auerbach on Müller-Lyer’s illusion, 288
Automatograph, 116, 117
Beats (see under Auditory Sensations)
Binaural experience, 272–279, 52–56 (see also Auditory Sensations)
adaptation in localisation, 278
intensity differences, 275, 276, 57–55
labyrinthine differences, 274; theories of (Münsterberg and Freyer), 274

Binaural experience (continued)
phase differences, 274, 275, 55, 56; theories of (Rayleigh, Myers and Wilson), 275
pitch differences, 99
actual differences, 273
temporal differences, 274
timbre differences, 274, 276, 277, 94, 95
Binocular experience, 262–274 (see also Visual Sensations)
brightness, 269–271, 107
combination, 263, 264, 60, 61, 106
contrast, 268, 266, 44–47
corresponding retinal points, 262–263, 60–62
covering or identical points, 263
cycloplegic eye, 164, 105
diplopia, 262, 63, 65
disparation, retinal, 262–263
eye movements in, 265–266, 271, 107, 108
flicker, 260, 270
rivalry, 267, 106
Blind spot, 263, 102
Boredom, in relation to fatigue, 182
Brentano, on the visual estimation of angles, 285
Breuer, on labyrinthine sensations, 62
Brewer’s prism stereoscope, 60
Brightness (see under Visual Sensations and Binocular Experience)
Brown, Crum, on labyrinthine sensations, 62
Camera acustica (Ewald’s), 58
Charpentier’s bands, 81, 90
Children, immediate memory in, 169
range of audible pitch in, 35
reaction times in, 130
sensibility to taste in, 104
size-weight illusion in, 207
visual imagery in, 130
Chronoscope (Hipp’s), 206, 28–35, 77
Clock time marker, 20, 110
Coherence of stimuli, 260, 261
Cohn’s test for visual acuity, 47, 48
Cold spots, 10–15, 17, 29, 40, 79, 80
Colour-blindness, 78–80, 84, 93, 42–43
theories of (see under Colour Sensations)
Colour sensations (see also Visual)
adaptation of, 74, 90, 241, 101
after-image, coloured waning of, 44, 45; negative, 74–76, 85, 88–91, 44; positive, 84, 85, 90, 95, 44, 45
anomalous, 80
black, nature of, 96–98
Charpentier’s bands, 81, 90
INDEX

Colour sensations (continued) contrast, binocular, 268, 269, 106, 107; simultaneous, 75, 76, 89, 93, 94, 43–47; successive (see above under After-image) flicker, 80, 81, 90; binocular, 269, 270 induction, simultaneous and successive, 76, 91, 92 at periphery of retina, 74, 93, 47 Purkinje’s phenomenon, 82–84, 91, 43 rivalry, binocular, 257, 106 rod vision, 82–84, 94, 42 theories of, 83, 85–100; Donders’ 100; Helmholtz’s, 87, 88, 92–98; Herin’s, 88, 100; V. Kries’s, 100; McDougall’s, 94; Maxwell’s, 87; Miller’s, 99, 100; Kellet’s, 94; Young’s, 87 Colour Wheel, 42, 89 Colourless sensations (see also Visual) characters of, 71, 96–98, 85 in colour blindness, 79, 93 conditions of, 72–74 contrast (see under Colour Sensations) theories of, 87–100 Colours, complementary, 75, 76 fundamental, 92 primary, 77 Combination tones (see under Auditory Sensations) Comparison (see also under Difference, Weber’s law) imagery in, 140–147 with elimination of 141 Compasses (Weber’s), 179, 18, 19 (see also Threshold, spatial) Confluence and contrast, 285–287 Consonance, theories of (see under Auditory Sensations) Contrast (see under Colour Sensations, Confluence, Visual Perception, and Psycho-physical Methods) Correlation, 113, 114, 119–121 Corresponding retinal points, 262–265, 269, 270, 60–62 Cortical lesions (see under Lesions) Curve, frequency, 120, 199 normal (‘probability’), 110–112 Curve of work (see Work) Cutaneous sensations, 10–18, 79–81, 77–80 acuity (or sensitivity), 240; thermal, 240; algiesic, 240, 241 adaptation, 12–17, 79 bibliography, 17, 18 fatigue, 241, 242 local signature, 11, 12, 218–226 and motor, distinction between, 65, 66, 80–85 Oxford

Cutaneous sensations (continued) tactual stimuli and time estimation, 296 Weber’s law, 244, 27 Cyclopean eye, 264, 295 Dark adaptation, 82–84, 91, 94, 95, 43 Deaf mutes, labyrinthine defects in, 84 Depth, perception of, 262–267, 60–62 ‘Determining’ tendencies (see Volition) Difference, experience of, 189, 244–261, 27 (see also Psycho-physical Methods) absolute impression, 256–261, 300, 301, 24, 26 bibliography, 261 ‘coherence’ in, 260, 261 in cortical lesions, 232, 244 Fechner’s law, 247, 253 practice effects, 255 side comparisons, 260 time error, 255 Weber’s law, 194, 244–261, 27; basis, 253, 254 Differences (see under Auditory Sensations) Differences, individual, in sensory acuity, 235–237, 239; in aesthetic preference, 307, 308; in Aristotle’s experiment, 104; in imagery, 137–142, 69; their importance for psychology, 9; in learning, 136, 164, 168–171; in muscular unification, 178; in range of audible pitch, 35; in retaining practice effects, 186; in reaction, 129–131; in colour relief, 268; in sensibility, 104, 105; in estimating size of heavenly bodies at horizon, 202; in spatial threshold, 19; in thought, 354; in time error, 255; in ‘type of judgment’, 260; in colour vision, 86 Differential threshold (see Threshold) Diplopia, 215, 262, 263, 61; and dis- paration, 264 Direction of sounds, 273–279 (see also Binaural Experience) Discrimination (see Experience of Difference) Disparity, crossed and uncrossed re- tinal, 262–265, 60, 61 Distance of sounds, 278 Distraction, 310, 323 Donders’ theory of vision, 100 Drainage theory of nervous energy, 94, 96, 318 Drugs, effect of, 11, 79, 104, 105, 143, 169, 230, 280, 281, 296, 319 Dynamometer, 176, 72, 177
# INDEX

Ebbinghaus’s explanation of Weber’s law, 253, 254

theory of hearing, 53

Efficiency, mental and muscular (see Work), visual, 336

Effort, attitude of, 332

muscular, 253–217

‘sense’ of, 214–217

Einhoven’s theory of the Müller-Lyer illusion, 288

Emotion (see Feeling)

‘Empathy,’ factor in determination of feeling (Lipps), 308

Energy, specific, of sensations, 111–116

Episcotizer, 92

Equality, experiences of (see Psychophysical Methods)

Equation, personal (see Reactions)

 Ergograph (Kraepelin’s), 73, 74

 Ergograph, 173–176, 178, 179

 Error, probable, 121, 122, 118, 119; space, 191, 192, 192, 258; time, 191, 192, 193, 255

 Ewald’s theory of hearing, 56, 58

 Expectation, effect of, in determination of threshold, 194; on sensibility, 234; in time estimation, 300

 Experience, binaural, 273–279 (see also under Binaural)

 binocular, 262–272 (see also under Binocular)

 of identity and difference, 189, 244–251, 27 (see also under Difference)

 Experiment, psychological, aims of, 5,

9, 7–2

 abstraction in, 7

 behaviour of subject in, 4

 introspection in, 3, 4

 simplicity in, 143, 144, 187, 188

 statistical methods in 117–124

 Eye movements (see Oculus Movements)

 Fatigue, in association experiments, 143

 auditory, 247, 243

 mental, 181–187; measurement of, 184, 185, 75, 76

 muscular, 173–176, 72, 73

 olfactory, 242, 87

 in perseveration of memory, 136, 147, 169

 in reactions, 128, 129

 visual, 88, 92, 241

 Fechner’s (and Helmholtz’s) theory of complementary after-sensations, 88

 colours, 81, 90

 law, 247–253; critical examination of, 249–253

 paradox, 270, 271

 Fechner’s (and Helmholtz’s) theory of complementary sensations (continued)

 side window experiment, 107

 time error, 192, 255

 verification of Weber’s law, 247

 Feeling, 304–314, 114–117

 bibliography, 314

determinants of, 304, 305, 307, 308

and expression, 308–310; analysis of, of emotion (Royce, Titchener, Wundt, and James-Lange), 311, 312

movements, organic, 308, 316; skeletal, 310, 311; during anesthesia, 312

thalamic lesion effects on, 313

Fourier’s theorem, 21, 23

Foveal and extra-foveal vision, 74, 82–

85, 236, 236, 47, 47, 58, 60

Galton’s whistle, 35, 90

Gauss’s law of error, 119, 198

Giddiness, 63–65

 Gustatory sensations, 102–106, 85–87

acuity (or sensibility), 239

 bibliography, 110

 chemistry of tasting substances, 103

 in children, 104

 compensation, 105, 106, 86

 contrast, 105, 106, 86, 87

 drugs, action of, 104, 105

 primary, 115

 rivalry, 105

tastes, classification of, 102; olfactory, 104, 108

Head on cutaneous sensibility, 13

on ‘schema,’ 216

 Heat spots, 10–14, 17, 39–41

 v. Helmholtz’s explanation of visual after-sensations of movement, 229; theory of hearing; 23, 48, 56, 58, 115

theory of colour vision, 87, 88; difficulties of, 92–94, 96, 98

 Hering, temperature adaptation, 15–17, 79, 80; nature of black, 90, 96–98; simultaneous and successive induction, 76, 91, 92; local signature, 226

Hering’s apparatus for binocular colour combination, 86; demonstration of binocular combination and uniocular contrast, 86, 87; view of retinal disparation, 284; fall experiment, 284; geometrical illusion, 200; explanation of certain visual illusions, 284, 285; theory of colour vision, 88–92, 95–100

Hipp’s chronoscope, 206, 206–205, 71

Holmgren’s woods, 112
INDEX

339

Horopter, 263, 264

Hypnosis, expression of feeling during, 312; in relation to determining tendency, 333

Identity and difference, experiences of, 244–261 (see also under Difference)

Illusions, Aristotle's, 214, 215, 216 of colour, 72–76 (see also Visual Sensations)
of distance, 256–257, 278, 282

Imagery, in memory, 130–142 (see Memory) in thought (see Thought) in volition (see Volition) Impressions, absolute, 256–261, 300, 301, 29, 24

Improvability in mental work, 185 Incitement, 183 Individual differences (see Differences) Induction, simultaneous and successive, 76, 29, 92

Inference, unconscious, in size-weight illusion, 207; in geometric illusion, 291, 292

Inhibition in mental work, 182 in muscular work, 175

Innervation, in memory, 153, 154

Interference, for removal of tones, 42

Interpretation, influence of, on visual acuity, 236; on spatial threshold, 29

Interruption tones (see under Auditory Sensations)

Intervals, musical, 26, 27, 45, 46, 53, 92

Introspection in experiment, 241, 143, 203, 213, 228, 256, 273, 305, 323 limitations of, 4 objections to, 3, 4 value of, 3, 5, 187, 8

v. retrepection, 3

Itching, sensation of, 17

James-Lange theory of emotion, 313

Kinesthesia, definition of, 60 (see also Motor Sensations)

König's views of combination tones, 51

Kraepelin's calculation test, 76

ergograph, 72–74

work curve, 180

v. Krie's theory of rod vision, 84, 94 theory of colour vision, 100

Krüger's theory of consonance and dissonance, 54

Labyrinthinesensations, 60–65, 17, 30, 81

adaption, 242

bibliography, 70

and binaural experiences, 274; (Preyer and Minsterberg), 274 'caloric' method, 82 end organs, function of, 61; Mach-Breuer-Brown theory, 62
giddiness, 63, 64

and motor, comparison between, 6c rotation, effect of, 63, 64

saccule, function of, 64, 65

utricile, function of, 64, 65

Learning, rational, compared to mechanical, 168 (see also Memory)

Leipzig time sense apparatus, 21 Lesions, corti-al, 235, 244, 247 peripheral, 11, 13 spinale, 13, 14, 23, 234 thalamic, 313

Lewis on the filled and empty space illusion, 283

Limen (see Threshold)

Lipp's insistence on *empathy,' 290, 308

Listing's law, 271, 107, 108

Local signature, 218–234

Aristotle's experiment, 224, 103, 104 cutaneous, 11, 12, 218–221, 16, 19, 104, 105

Hering's theory, 226, 227

Lotze's theory, 226

motor (kinesthetic) sensations in, 224–229

retil, 218, 222–231

spatial character, 219, 221–223, 225 spatial threshold, 218–223, 16, 19

© in this web service Cambridge University Press www.cambridge.org
INDEX

Localisation (see under Local Signature, Sound)
Locomotor ataxia, kinaesthetic sense in, 66, 206
Lotze’s theory of local signature, 226
McDougall’s explanation of graded contrast, 96
of simultaneous contrast, 94
Mach’s theory of the function of the auriæ, 276
Mach-Breuer-Brown theory of labyrinthe sensations, 92
Martin and Müller, absolute impression, investigations, 259–260
Maxwell’s theory of colour vision (see under v. Helmholtz)
Mean, median (see under Statistical methods)
Meaning, 328, 339, 332
Meissner’s corpuscles and touch spots, 10
Memory, 139–171, 69–72 (see also under Association)
age influence, 169
bibliography, 151, 171
forgetting, rate of, 152, 153, 167
group reproduction, 158
the ‘identical series’ method, 147
images, 136–143, 171, 122; after-images, 139, 140
individual differences, 156, 164, 168–171
inhibition, retro-active, 153, 154
initial reproduction, 148
the ‘learning’ method, 144–146
learning, economical methods of, 164–165, 217–222
length of series, influence of, 148, 149
perseveration of experiences, 136, 143,
165, 170
position of syllables, influence of, 140–151
practice, influence of, 166, 167, 169, 170
the ‘prompting’ method, 144, 149, 150
reading, speed of, 167
the ‘reconstruction’ method, 147
recognition, distinct from reproduction, 170
repetitions, distribution of, 160–162
the ‘retained members’ method, 146
rhythm and accent, influence of, 140–151, 158, 166
the ‘scoring’ method, 144–146, 60, 70
the ‘scoring’ method, 144–148, 70, 77
the ‘selection’ method, 147
Memory (continued)
time influence, 141, 142, 152, 153, 164
Menière’s disease, character of, 63
Mental excitement, effect on muscular work, 177
fatigue, effect on muscular work, 177
(see under Mental Work)
Mental work, 172, 178–188, 75, 76
adaptation, 183, 184
aesthesiometric test, 178
bibliography, 188
calculation test, 179, 76
complition test, 179, 75
continuous tests, 178, 180–187
curve, 180–182
dotting test, 75
ergograph test, 178
fatigability, 184
fatigue, 180–186
improvement, 185
incitement, 183
interpolation tests, 178
laboratory work, criticism of, 187, 188
learning test, 179
letter-erasing test, 179
and muscular, compared, 172
pause effects, 184–187
practice effects, 180, 183–187
retentiveness of improvement, 185, 186
spatial threshold as test, 178, 179, 180, 183, 185
Menthof, effect on heat spots, 11
Metamorphopsia, 227
Methods, of learning (see under Memory); the psycho-physical (see Psycho-physical); statistical (see Statistical)
Meyer’s theory of hearing, 28
Microsia, 31, fixation point, 289; beyond fixation point 281, 282
in presbyopia, 281
in retinitis, 283
Mind-blindness and mind-deafness, 329, 333
Mode (see under Statistical Methods)
Motives, 139
Motor anæsthesia, 64, 206, 207
Motor sensations, 60, 63–70, 81–83
acuity, 241
ataxia, effect of, 63, 206
attunement, 207–213
bibliography, 78
central ‘sense’ of effort, 212–217
cramp, 67
end organs, 65; effect of fanatic current, 66
fatigue, 67

www.cambridge.org
INDEX

Motor sensations (continued)
- illusions, 67, 82, 83
- and labyrinthine, resemblance between, 60
- local signature attributed to, 226–228
- memory images, 137–139
- in ocular movements, 281, 282
- of pressure, 67
- of straitness, 67

Movement of eyes (see Ocular); in feeling (see Feeling); in reactions, 129; tactical perception of, 221, 107; visual perception of, 228–231, 62, 63

Müller, G. E., theory of colour vision, 99, 100
- and Martin, absolute impression investigations, 226–227

Müller-Lyer’s illusion, 286–289, 292, 299
- Auerbach’s explanation, 288
- effect of practice on, 292
- Eitgen’s explanation, 288
- eye movements in traversing, 292
- in primitive people, 289

Münsterberg’s theory of auditory localisation, 274
- of relation between time estimation and respiration, 299

Muscular and mental activity, inter-relation of, 172

Muscular effort (see under Weight) sensations (see Motor Sensations)
- muscular work, 172–178, 77–78
- afferection, effect of, 177
- bibliography, 188
- influence of fatigue, 174–177; peripheral and central factors, 174
- impulses, afferent, inhibitory effects of, 175; sensory effect of, 175, 177
- interest, effect of, 177
- leads, constant and variable, 175, 176
- practice, 177, 178, 77
- Musical intervals, 45, 46, 53, 95, 96
- Myers and Wilson, influence of binocular phase differences, 274
- Nervous energy, specific, 111–116
- theory of drainage, 94, 96, 318
- and Weber’s law, 246
- Noise, 24–26, 34, 52, 97, 94
- Normal curve, in statistical methods, 119
- Nicotine, producing colour-blindness, 79
- Olfactometer (Zwaardemaker’s), 238, 85
- Olfactory sensations, 102, 105–118, 87
- acidity, 238, 239, 100, 101
- adaptation, 242
- anamnia, 108
- bibliography, 110
- classification, 107, 108
- compensation, 109, 88
- conditions, 106
- defects, 108
- fatigue, 105, 109, 242
- hallucinations, 108
- primary, 115
- in relation to gustatory sensations, 103, 104, 108
- rivalry, 109, 83
- Weber’s law, 246

Opium, effect on experience of time, 295

Pain, 10–14, 78, 79
- acuity of, 740, 241
- adaptation, 242
- effect on pulse and respiration, 310
- ‘refractory’, 15
- spots, 14, 78, 79
- Painless areas, 14, 79

Perception, 7–12
- Perimeter for experiments, in vision, 41; on sound, 52
- Perseveration, 136, 143, 153, 166, 168–171, 333
- Personal equation (see Reactions)
- Perspective, illusions of, 291, 292, 320; influence of, on visual estimation of size, 285, 291
- Pitch (see under Auditory Sensations and Binaural Experience)

Phonemograph, 309, 115
- Pneumograph, 308, 114, 115
- Poggendorff’s figure, 289
- Politzer’s acometer, 237, 48, 49
- Position, awareness of, 65, 69, 70, 216, 223, 224, 266
- Practice at geometric illusions, 292
- at mental work, 180–187
- at muscular work, 177, 181, 75, 111, 113
- and sensory acuity, 234
- Presentations, ‘apparent order of, 315–317
- Pressure (see Touch)
- Preyer’s theory of auditory localisation, 274

Psychology, aims of, 1, 4, 5, 9, 143, 191, 192
- physiological, in relation to experimental, 7, 8
- statistical methods in, 117–124
INDEX

Psycho-physical methods, 189–204, 15
bibliography, 204
the constant method, 190, 197–202, 197
contrast effects, 200, 260, 261
method of equal-appearing intervals, 203, 20–27
the limiting method, 190, 192–197, 293, 16–18
method of mean error, 190–192, 15, 16
reversals, 199, 200
side comparisons, 200, 260, 261
space and time errors (see under Error)
subject’s attitude, 203, 203
uses of, 189, 190
Purkinje’s phenomenon, 82, 83, 42
Hering’s explanation of, 91
rod vision as cause of, 83–85
Quincke’s tubes, 98, 99
Race influence, in reactions, 130; in geometric illusions, 189
Range, semi-interquartile (see under Statistical Methods)
Rational learning, 167, 168
Rayleigh, Lord, on binaural phase differences, 275
Reaction times, 125–135, 26–77
Reactions, age influence in, 130
analysis of, mathematicial, 134; psychological, 133–134, 133
associative, 133–135, 37
bibliography, 135
choice, 131, 132, 37
chromosome (Hipp’s), 218–25
composite, 125, 121–135, 35–37
definition of, 125
discriminative, 131
fatigue effects in, 125, 129
individual variations in, 119, 130
movements in, 129
muscular, 126–130
natural, 125
personal equation, 130
physiological aspects of, 134, 135
practice effects in, 128
race influence in, 130
recognition, 131
reduced, or central, 125, 126, 128
sensorial, 126–130
simple, 125–131, 25, 36
Recognition and Recall, 11, 12
Repetitions, distribution of, in learning, 160–162; in effecting motor attunement, 212
Reproduction (see under Memory)
Resistance, experience of, 67, 82
Resonance, of auricles (Mach), 276; principle of, 21–23, 93; in theory of hearing, 48–53
Rest, effect of, on mental work, 184–185
Retentiveness, of improvement in mental work, 185, 186
of memory (see Memory)
Reticulum, producing distorted vision, 277
microsia in, 283
Reversals, in the psycho-physical methods, 199, 200
Rhythm, 204, 207–203, 110, 111
accentuation in, 301, 302
bibliography, 303
maintenance of, 302
in memory, 151, 166–168
reproduction of, 302
respiratory, and time estimation (Minsterberg), 298
Rivers, on microsia beyond the fixation point, 283
Rod vision, 83–85, 94, 42
Rolle’s theory of vision, 94
Royer’s analysis of feelings, 314, 315
Rutherford’s theory of hearing, 56
Santonin, producing colour-blindness, 79
‘Schemata,’ influence of, 216, 231, 282, 294
Schultze’s theory of rod vision, 84
Scotoma, central, 79
Sensation (see also under Auditory, Cutaneous, Gustatory, etc., and Sensibility)
aucuity of (see Acuity)
algae, 240, 241 (see also Pain)
analysis of, 7
auditory, 19–59
autokinetic, 230, 231
cutaneous, 10–18
discrimination as factor in, 233
gustatory, 102–110
immeasurable of, 253, 253
kinesthetic, 60, 61–70
labyrinthine, 60–65
modal differences of, 113
motor, 60, 65–70
olfactory, 102, 106–110
primary, 113–116
qualitative differences of, 113
specific energy of, 111–116
statesthetic, 70
temperature, 9–17
visceral, 13–15
visual, 71–101
Sensibility, 233–243 (see also Acuity)
bibliography, 243
conditions determining, 233, 233
INDEX

Sensibility (continued)
cutaneous, two systems of, 11-14
fatigue and, 234, 241, 242
influence of interpretation, 236, 237, 239
physiological and psychological aspects of, 244
visual, 236, 237
Sex influence, in colour-blindness, 78
in ‘type of judgment,’ 259, 260
Signature, local (see Local)
Silence, aural conditions in, 32
Size-weight illusion, 206, 207, 216-18
Skin (see Cutaneous Sensations)
Smell (see olfactory Sensations)
Snellen’s illiterate visual test-types, 47,
48
Sound, conduction of, 19, 20, 38, 50,
275, 292, 293
direction of, 273, 278 (see also
Binaural Experience)
distance of, 278
pictures (Ewald’s), 57
Space error, in psycho-physical methods,
191, 192, 195, 228
Spatial character, 219, 221-223, 225
Spatial threshold (see Threshold)
Sphygmograph, 308, 309, 315
Sphygmomanometer, 309
Spots in work, 182, 183
Standard deviation, 118, 120, 123, 118-121
Statistical methods, 117-124, 118-121
bibliography, 134
correlation, 123, 124, 120, 121
curve, frequency, 120, 180, 199
normal (‘probability’), 119-123
Gauss’s law of error, 119, 198
mean (average), 115, 121, 118,
119
mean variation, 118, 118, 119
median, 123, 118
mode, 118, 120
probable error, 121-123, 119
semi-interquartile range, 121, 119
significant differences, 118-122
standard deviation, 118, 120, 121,
118-121
variation, coefficient of, 118
Stereoscope, 263, 264, 60, 61
mirror (Wheatstone’s), 60, 61
 prism (Brewster’s), 60, 61
Stern’s tone variants, 97
Stimuli, adequate and inadequate, 111
cohere ence of, 260, 261
effective and ineffective, 111
Strain, 67-69, 181, 183, 332 (see also under Weight)
Stumpf’s theory of consonance and dissonance, 54

Summation tones (see under Auditory
Sensations)
Sun and moon, estimation of size of,
292-294
Tachistoscope, 64-66
Talbot-Plateau law, 81, 169, 90
Taste (see Gustatory Sensations)
Temperature, thermal acuity, 240
adaptation, 15-17
after-sensations, 79, 80
cutaneous sensibility to, 10-17, 79,
80
and weight illusion, 80
Thought, analysis of, 327, 328
imagination in, 377-330
methods of experiment upon, 325-327
12, 13, 14, 15
Threshold, absolute, 30, 66, 180, 190,
193-197, 228, 232-243, 316, 319
differential, 35, 180, 199, 192-204,
219, 223, 234, 244-245, 255-256
spatial, 178, 197, 198, 218-225, 18, 19
Tickling, sensation of, 17
Time, 192-301, 119
biography, 303
influence in binaural experience, 274
displacements, 315-317
error in psycho-physical methods, 191,
192, 195, 225
filled and empty intervals, 297, 298,
110
respiration, affecting estimation of,
298, 299
sense apparatus (Leipzig), 21
spurious or sensory present, 195
surprise, expectation, 300
Titchener’s analysis of feelings, 312
Tommessen, 67, 68
Touch, acuity to, 239, 240
adaptation, 17, 242
light and heavy, 11-14
spots, 10, 77, 78
Traube-Hering waves, 319
Variation tones (see under Auditory
Sensations)
Viscera, sensations of, 13-15
Visiles, 13
Visual perception of movement, 238-
239, 62, 63
Visual perception of size and direction,
280-294, 58, 59, 208-110
after-images, projection of, 285, 44
angles, estimation of, 285; (Brentano),
285; (Hering), 285; (Wundt), 285
bibliography, 297
contrast and confluence in, 285-287
geometric illusions, 283-292, 308-110
metamorphopsia, 237
INDEX

Visual perception of size and direction

(continued)

microsopia at fixation point, 280 ; beyond fixation point, 281 ; in presbyopia, 281 ; in retinitis, 283
Müller-Lyer's figure, 286–289, 292
perspective, influence of, 285, 291
Poggendorff's figure, 289
space, filled and empty, 283–285, 292, 293
Zöllner's figure, 289, 290
Visual sensations, 71–101 (see also under Binocular Experience, Colour-Blindness, Colour and Colourless Sensations)

accuracy, 734–736, 47, 48
adaptation, 74, 91, 141
after-sensations of movement, 228–230
attention to, 312–317 ; fluctuations in, 318–320, 321, 113–115
bibliography, 86, 101
binocular experience, 263–272 (see also under Binocular)
brightness, definition of, 72 ; determination of, 81, 90, 91 ; effect of dark adaptation, 82, 83, 43 ;
thories of, 83, 91 ; in binocular vision, 269–271, 107
of colour (see under Colour)

efficiency, 236
fatigue, 88, 92, 241
induction, simultaneous and successive, 26, 92, 92
local signature, 213, 225–231
primary, 113, 114
rivalry, binocular, of, 267, 106
sensibility, 236
Taillbot-Plateau law, 81, 269, 99
theories of, 83, 87–101
and time illusions, 206
and Weber's law, 245, 246
Volition, methods of experiment upon, 330, 331
analysis of, 332, 333
'determining' tendencies, 331, 333, 4
Ward, J. (footnote), 308
Weber's compasses (esthesiometer), 178, 18, 19

Weber's law, 244–247, 253, 254, 260, 261, 27
absolute impression, 256–261, 304
basis, 253, 254
coherence of stimuli, 250, 251
differential threshold of time intervals, 251
Ebbinghaus's interpretation, 253, 254
Fechner's verification, 247–253
irradiation, theory of, 254
limits of, 246
Wundt's interpretation, 253
Weight, 205–217, 17, 18
absolute impression, 256–260, 23, 24
adaptation, 242
anesthesia, effects of motor and tactual, 205
attunement, motor, 207–213
bibliography, 217
effort, sense of, 213–217
influence of size, 206, 207, 17, 18
speed of lifting, 206–208
influence of temperature, 80
Weber's law, 244–246
Whetstone's mirror, stereoscope, 60, 61
Whistle, Galton's, 35, 96
Will (see Volition)
Wilson and Myers, binalar phase differences, 275
Work curve, mental, 180
Kräpelin's analysis of, 183 (see also Menal Work and Muscular Work)
Wundt's analysis of feelings, 311
explanation of wrong estimation of angles, 285
insistence on tactual basis of auditory localisation, 272
interpretation of Weber's law, 253
Young's theory of colour vision (see under v. Helmholtz)
Zero, physiological, 16
Zöllner's figure, 280, 290
Zwaardemaker's olfactometer, 238, 239
olfactory sensations, classification of, 107, 108
theory of, 109
