1937
CONTENTS

Preface                                           page viii

Chap. 1: Plants and Animals                      1
What is meant by living things. Differences between living and non-living things. Differences between plants and animals.

Chap. 2: Flowering Plants                       4
The structure and uses of the parts of a buttercup. The importance of pollination and fertilisation; cross-pollination and self-pollination; the advantages of cross-pollination; insect- and wind-pollinated flowers. Seed dispersal; seeds dispersed by wind, animals, water, and explosion. Structure of the bean seed. The germination of bean, and marrow; conditions necessary for germination; the region of growth of root and stem; the effects of light, water, and gravity on growth.

Chap. 3: Flowering Plants (cont.)               19

Chap. 4: Flowering Plants (cont.)               28

Chap. 5: Flowerless Plants                      46

Chap. 6: The Soil                               55
CONTENTS

CHAP. 7: SOME SIMPLE ANIMALS  page 61
Two groups of animals—those with, and those without backbones. The amoeba; animals similar to the amoeba which cause disease. The hydra; what happens when part of a hydra is cut off. Corals; how corals are formed. The earthworm; uses of earthworms in the soil; animals similar to the earthworm. Shrimps, lobsters, crabs, and similar animals. Spiders. The water snail; the uses of snails and other animals like them; the pearl oyster; snails and slugs as pests.

CHAP. 8: INSECTS  75

CHAP. 9: ANIMALS WITH BACKBONES  85

CHAP. 10: HUMAN PHYSIOLOGY  106

CHAP. 11: HYGIENE  130

CHAP. 12: YOUNG ANIMALS  143
CONTENTS

CHAP. 13: EVOLUTION  page 149

PRACTICAL WORK  171

QUESTIONS  185

APPENDIX A  194
Questions requiring short answers. Suitable for quick periodic tests.

APPENDIX B  200
Apparatus and materials necessary.

APPENDIX C  203
Some useful reference books.

APPENDIX D  204
How to find and keep animals.

INDEX  207
PREFACE

Many requests have been made to re-issue the Biology chapters from *Elementary Science* by H. Webb and M. A. Grigg. This has been done without any change.

This book is intended for children from 11 to 14 or 15 years old. It is written for the child and not for the teacher. Consequently the scientific terms have been omitted, so that the child can read and understand the subject.

Such a wide field has been covered that some subjects have been dealt with very briefly. The teacher should supplement these subjects, and for this reason the names of a number of reference books are given at the end of the book.

The division of work for each year is left to the teacher. When making the syllabus, however, it is necessary to remember that many specimens are only obtainable at certain times of the year. These lessons must be taken during the appropriate season.

The specimens should be provided by the children, and not by the teacher. Exceptions of course must be made in town schools. The Biology room must be a room of “Living Things”.

M. A. GRIGG
