List of Plates	<i>page</i> xi
List of Figures in the Text	xii
Foreword	xv
Preface	xvii
<i>Chapter I.</i> The birth of the steam boat	1
Early experiments. Jacques Périer and the Marquis de Jouffroy d'Abbans. James Rumsey and John Fitch. Patrick Miller and William Symington. The <i>Charlotte Dundas</i> . Fulton and the <i>Clermont</i> . Bell and the <i>Comet</i> .	
<i>Chapter II.</i> Early progress of steam navigation	16
Growth of steam tonnage. First marine engineers. H.M.S. <i>Lightning</i> . John Chapender's letter. Voyage of <i>Enterprize</i> . Royal Navy and Steam Mail Service. Writings of Otway and Dinnen. Voyage of <i>Berenice</i> .	
<i>Chapter III.</i> Pioneer transatlantic steamships	33
Voyages of <i>Savannah</i> , <i>Royal William I</i> and H.M.S. <i>Rhadamanthus</i> . Transatlantic Steamship Companies. Voyages of <i>Sirius</i> , <i>Great Western</i> , <i>Royal William II</i> , <i>Liverpool</i> , <i>British Queen</i> , <i>President</i> and <i>Britannia</i> . Sailing packets and steamships.	
<i>Chapter IV.</i> Steam men-of-war	49
Marine engineering firms on Thames. Their work for Royal Navy. Maudslay, Sons and Field. H.M.S.S. <i>Medea</i> and <i>Terrible</i> . John Seaward. <i>Gorgon</i> and her engine. Miller and Barnes. John Penn. J. and G. Rennie. Edward Humphrys.	
<i>Chapter V.</i> The introduction of screw propulsion	64
Shorter's screw in <i>Doncaster</i> . Patents for screw propellers. Work of F. P. Smith and John Ericsson. <i>Archimedes</i> . H.M.S. <i>Rattler</i> . Screw-driven line-of-battleships. Thrust bearings. Penn and the lignum vitae bush.	
<i>Chapter VI.</i> Naval officers and steam	82
Opposition to steam. Books by naval officers on steam navigation and steam engines. Use of steam vessels in fleets. Combined use of steam and sailing ships.	

viii	CONTENTS
<i>Chapter VII.</i>	Iron ships for mercantile purposes <i>page</i> 94
	Birth of iron shipbuilding on Mersey, Thames and Clyde. Notable iron steamships: <i>Great Britain, Sarah Sands, Persia, Himalaya, Great Eastern.</i>
<i>Chapter VIII.</i>	Early iron warships 111
	The <i>Nemesis</i> . Iron vessels for Royal Navy. Effect of shot on iron plates. Iron steam frigates: <i>Birkenhead, Megaera, Simoom, Vulcan</i> . Thames Iron Works. Armoured ships in Crimea.
<i>Chapter IX.</i>	Low pressure marine boilers 125
	Flue boilers. Copper <i>versus</i> iron. Prevention of incrustation. Valves and gauges. Tubular boilers. Views on high pressure steam. Economy of fuel. Coaling ship.
<i>Chapter X.</i>	Types of marine engines 142
	Bourne's works on steam engine. Side-lever engines. Paddle-wheel engines. Engines for screw ships. Details of engines. Expansive working. Samuel Hall and surface condenser.
<i>Chapter XI.</i>	Steam and sail from 1860 to 1870 160
	Characteristics of the period. End of sailing era. <i>Victoria</i> and <i>Devastation</i> . Ericsson and the <i>Monitor</i> . Twin screws. Fast cruisers. Jet propulsion. Theory and practice. Education of marine engineers.
<i>Chapter XII.</i>	The marine compound engine 174
	Value of compound working. Work of John Elder. Compound engines in Atlantic ships. Engines of H.M.S. <i>Constance</i> . Compound engines in Royal Navy. Machinery of H.M.S. <i>Iris</i> .
<i>Chapter XIII.</i>	Boiler practice and progress 189
	Staffordshire and Yorkshire iron. Corrosion in boilers. Admiralty Boiler Committee. <i>Thunderer's</i> boiler explosion. Cylindrical boilers. Use of steel. Water-tube boilers. Perkins's boiler. Forced draught.
<i>Chapter XIV.</i>	Introduction of auxiliary machinery, I 204
	The ship a steam being. Pumping machinery. Macfarlane Gray and steam steering engine. Hydraulic steering gear. Introduction of gun turrets. Steam and hydraulic machinery for guns.

CONTENTS

ix

- Chapter XV.* Introduction of auxiliary machinery, II
page 220
 Distilling plant. Fresh water for boilers. Whitehead torpedo. High-pressure air compressors. Lighting by electricity. Electric generating plant. Forced lubrication for engines. Refrigerating machinery. Steam boats for ships.
- Chapter XVI.* Triple-expansion engines and water-tube boilers
238
 Progress from 1882 to 1902. Higher steam pressures. Improvements in engines. Work of Benjamin Normand. Kirk and the *Aberdeen*. Work on North-East Coast. Fast liners and cruisers. Adoption of water-tube boilers.
- Chapter XVII.* Machinery of torpedo craft
254
 Birth of torpedo boat. Work of Yarrow. Thornycroft and J. A. Normand. H.M.S. *Lightning*. Torpedo gunboats. Torpedo-boat destroyers. High speed engines. Notable accidents.
- Chapter XVIII.* The introduction of the Parsons steam turbine
271
 Life and work of Parsons. Marine Steam Turbine Company. *Turbinia*, *Viper*, *Cobra*. Turbines in mercantile vessels. Turbines in Atlantic liners and battleships. Oil fuel in Royal Navy. Oil fuel burning.
- Chapter XIX.* Steam turbines and transmission gear
288
 Rateau turbines. Curtis turbines. Turbines in United States Navy. Brown-Curtis turbines. Other types. Introduction of gearing. *Vespasian*. Advantages of gearing. Michell thrust bearing. Electric transmission. Hydraulic transmission.
- Chapter XX.* Steam machinery from 1919 to 1937
303
 Types of machinery. Oil *versus* coal. Cylindrical boilers and superheaters. High-pressure steam. Yarrow boilers. Babcock and Wilcox boilers. New types of boilers. Reciprocating engines. Exhaust steam turbines. Geared turbines. Turbo-electric propulsion.

Chapter XXI. The marine internal combustion engine *page 324*

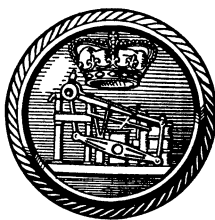

Gas engines for ships. Petroleum engines. Herbert Akroyd Stuart. Rudolph Diesel. Maschinenfabrik Augsburg-Nürnberg. First marine Diesel engine. *Selandia*. Submarine engines. Design of large oil engine. Burmeister and Wain. Sulzer Brothers. M.A.N. Doxford engine.

Chapter XXII. Marine engineering and the nation 340

Admiralty and marine engineering. Board of Trade and classification societies and marine engineering. Lloyd's Register. Technical institutions. Engineering research. Experimental tanks. Interdependence of shipping, shipbuilding and marine engineering.
