Many ideas and concepts about natural hazards have been developed in Australasia, but these are often overlooked in books written from a Northern Hemisphere perspective. *Natural Hazards in Australasia* is the first textbook that considers Australasian natural hazards, their triggering mechanisms and the physical and social environments in which they occur.

James Goff and Chris de Freitas lead an expert author team from around Australia and New Zealand to introduce readers to the natural hazards of the Australasian region, including floods, drought, tropical cyclones, volcanic and seismic hazards, tsunamis, landslides and bushfires. This book explores the interactions not only between one hazard and another, but also between humans and natural hazards.

Key pedagogical features for students include learning objectives, regional case studies, summaries, chapter glossaries, end-of-chapter reviews and discussion questions, and further reading and resources. The full colour text is enhanced by a rich array of illustrations, photographs and maps.

James Goff is Professor in the School of Biological, Earth and Environmental Sciences at UNSW Australia.

C R de Freitas is Associate Professor in the School of Environment at the University of Auckland.

## 1 Introduction

*James Goff and C R de Freitas*

- Introduction 2
- What is Australasia? 2
- What is a natural hazard? 3
- Conceptual overview 3
- Scope and plan of the book 5
- References 6

## 2 Floods

*C R de Freitas*

- Learning objectives 8
- Introduction and overview 8
  - Hazard event characteristics 10
- Types of floods and their causes 10
- Measuring and monitoring floods 15
- Probabilities and frequencies 16
- Flood hazard mitigation and management 17
- Adjustments and human response 19
  - Avoidance 19
  - Protection 20
  - Regulation 21
  - Relocation 22
  - Compensation 22
  - Education 23
- Coastal inundation 23
- Hazard risk assessment and management 25
- Summary 27
- Glossary 28
- Review questions 29
- Discussion questions 29
- Further reading and other resources 29
- References 30

## 3 Drought

*C R de Freitas*

- Learning objectives 33
- Introduction and overview 34
- Characteristic dimensions of droughts 35
Contents

What is drought? 36
   Meteorological drought 36
   Agricultural drought 37
   Hydrological drought 37
   Socioeconomic drought 38
Causes of drought 38
Drought indices 40
Impacts of drought 43
   Human response to the drought hazard 44
      Water supply management 45
      Water demand management 45
      Mitigation of drought impact 45
Summary 48
Glossary 48
Review questions 48
Discussion questions 49
Further reading and other resources 49
References 49

4 Tropical cyclones 51
   C R de Freitas
Learning objectives 52
   Introduction 52
   Characteristics of tropical cyclones 53
   Tropical cyclone formation and decay 54
      Tropical cyclone intensity 55
   Monitoring and warnings 58
   Trends and links with large-scale atmospheric circulation 61
   Impacts of tropical cyclones 63
   Impact mitigation 67
   Risk analysis and future trends 68
   Summary 69
Glossary 69
Review questions 70
Discussion questions 70
Further reading and other resources 70

5 Volcanic hazards 73
   Jan Lindsay, Mary Anne Thompson and Philip Shane
Learning objectives 74
   Introduction 74
   Overview of volcanoes in Australasia 77
      Australia 80
      New Zealand 81
      Melanesia 83
      South-West Pacific 85
   Physical dimensions of volcanic hazard 87
      Likelihood of eruption 87
      Style of eruption 88
## Contents

- Hazardous volcanic phenomena 89
- Hazards of the AVF 91
- Human and social dimensions of volcanic hazard 93
  - Terminology of risk 93
  - Volcanic impacts 94
  - Impact assessment in the AVF 94
- Hazard mitigation and risk reduction for volcanic hazard 94
  - Summary 97
  - Glossary 98
  - Review questions 100
  - Discussion questions 101
  - Further reading and other resources 101
  - References 101

### 6 Seismic hazards 104

- M C Quigley and B Duffy
- Learning objectives 105
- Introduction 105
- The origin of earthquakes 108
  - Plate tectonics, stress and rock fracturing 108
  - Earthquakes, faults, and plate tectonic settings 108
- Earthquake behaviour and triggering 113
  - Models for describing earthquake behaviour 113
  - Earthquake triggering 115
- Measurement and characterisation of earthquake shaking and faulting 117
  - Earthquake shaking intensity 117
  - Measuring fault ruptures 120
- Earthquake frequency–magnitude relationships 122
- Earthquake hazards 125
  - Faulting-induced hazards 125
  - Shaking-induced hazards 126
    - Assessing, avoiding and mitigating earthquake hazards 127
- Summary 135
- Glossary 136
- Review questions 140
- Discussion questions 140
- Further reading and other resources 140
- References 143

### 7 Tsunamis 147

- James Goff and Catherine Chagué-Goff
- Learning objectives 148
- What is a tsunami? 148
- Introduction and overview 148
- Overview of tsunamis in Australasia 151
  - Australia 151
  - New Zealand 153
  - Pacific Island countries and territories within Australasia 157
  - Distant threats for Australasia 160

CONTRIBUTORS

Catherine Chagué-Goff is Senior Lecturer in the School of Biological, Earth and Environmental Science at UNSW Australia.

Samantha Clarke is Assistant Lecturer in Geology and Engineering Geology in the Geocoastal Research Group at the University of Sydney.

C R de Freitas is Associate Professor in the School of Environment at the University of Auckland.

Brendan Duffy is Lecturer in Applied Geoscience in the School of Earth Sciences at the University of Melbourne.

James Goff is Professor in the School of Biological, Earth and Environmental Sciences at UNSW Australia.

Katharine Haynes is a Senior Research Fellow at Risk Frontiers, Macquarie University.

Thomas Hubble is Associate Professor in Geology and Engineering Geology at the University of Sydney.

Jan Lindsay is Associate Professor in the School of Environment at the University of Auckland.

Mark Quigley is Associate Professor of Active Tectonics and Geomorphology in the School of Earth Sciences at the University of Melbourne.

Philip Shane is Associate Professor in the School of Environment at the University of Auckland.

Mary Anne Thompson is Research Fellow in the School of Environment at the University of Auckland.

Joshua Whittaker is a Research Fellow at the Centre for Risk & Community Safety at the Royal Melbourne Institute of Technology.
