CONTENTS

Chapter VI THE CONSTANCIES page 119
(1) Introduction 119
(2) Shape constancy 120
(3) Size constancy 122
(4) Colour and brightness constancy 126
(5) Individual variations in the perception of constancy 140

VII THE FUNCTIONS OF THE FRAMEWORK IN PSYCHO-PHYSICAL EXPERIMENTS 149
(1) The indifference point and the central tendency of judgement 149
(2) The time error 153

VIII THE PERCEPTION OF MOVEMENT 162
(1) Real movement 162
(2) Apparent movement 166
(3) Flicker and fusion 180

IX MICHOTTE’S STUDIES OF SOME INTRINSIC PHENOMENA OF EXPERIENCE 183
(1) Mechanical causality and ‘intentionality’ 183
(2) ‘Reality’ and volume 191
(3) ‘Substantiality’ and ‘permanence’ 193

X THE INFLUENCE OF INTERNAL AND INDIVIDUAL FACTORS UPON PERCEPTION 200
(1) Levels of attention 200
(2) Fluctuation of attention 203
(3) Voluntary attention 208
(4) ‘Set’ and Aufgabe 214
(5) The study of motivational factors 231
(6) Perceptual ‘types’ 247
ILLUSTRATIONS

Fig. 1. ‘Incomplete’ figures

2. Complex ‘meaningless’ figure

3. The disappearing disc figure

4. The effect of surroundings upon perceived length

5. The effect of lengths upon each other

6. The effect of surroundings upon apparent brightness

7. ‘Closure’ of dotted figures

8. The effect of inclusiveness

9. The effect of ‘goodness’ of configuration

10. The effect of lack of continuity

11. The effect of learning

12. The effect of ‘goodness’ of the parts
ILLUSTRATIONS

Fig. 13. The effect of the field upon contained figures page 66

14. The spontaneous grouping of parts

15. The ‘wife and mother-in-law’ figure

16. The relation of the parts to the whole

17. The ‘sailor’ and the ‘Jew’ figure

18. Three- and two-dimensional figures

19. The effect of structural continuity upon three-dimensional perception

20. The development of vertical orientation

21. Movement configurations produced by ambiguous stimulus constellations

22. Varying movement configurations

23. The causality phenomenon
Michotte, A. (1946). *La Perception de la Causalité*, Fig. 1.

24. The appearance of volume

25. The reversible sector figure

26. Reversible perspective figures

27. The effect of familiarity
ILLUSTRATIONS

Fig. 28. The effect of ‘set’

29. The effect of suggestion

30. The alternating profile figure
ACKNOWLEDGEMENTS

My grateful acknowledgements are due to Sir Frederic Bartlett for his help and advice. It is clear that what I have written is largely dependent on his work and his ideas. I should like also to thank Professor Michotte for his assistance, and Professor Oldfield and Mr Zangwill for reading the book before publication and advising me on it.

Acknowledgement for permission to reproduce figures is made to the following:

R. F. Street and the Teachers' College, Columbia, Bureau of Publications, for Fig. 1; Archives de Psychologie for Figs. 2 and 5; the American Journal of Psychology and H. Werner, W. D. Orbison, and E. G. Boring for Figs. 3, 13, and 15; Akademische Verlagsgesellschaft Geest & Portig K.-G. for Fig. 4; the American Journal of Physiology for Fig. 6; L. L. Thurstone for Fig. 7; Springer Verlag for Figs. 8, 14, 19, 21, 27, and 28; Johann Ambrosius Barth for Figs. 9 and 10; the American Psychological Association for Figs. 11, 12, and 30; the Journal Press for Figs. 16 and 29; R. H. Thouless for Fig. 17; Presses Universitaires de France for Fig. 20; Archives of Psychology (R. S. Woodworth) for Fig. 22; E. Nauwelaerts for Fig. 23; Académie Royale de Belgique for Fig. 24.

Acknowledgement is also made to Delachaux et Niestlé, Neuchâtel, for permission to quote from La Construction du Réel chez l'Enfant, by Jean Piaget, the passages on pp. 12 and 188.
