INDEX.

A.

ABERRANT. | BAER.
---|---
A. | Animals, blind, in caves, 110.
_Aberrant group_, 379.
Abyssinia, plants of, 340.
Acclimatisation, 112.
Addax, 173.
Affinities of extinct species, 301.
--- of organic beings, 378.
Agassiz, on Amblyopsis, 112.
--- on groups of species suddenly appearing, 289.
--- on prophetic forms, 301.
--- on embryological succession, 310.
--- on the Glacial period, 330.
--- on embryological characters, 368.
--- on the latest tertiary forms, 278.
--- on parallelism of embryological development and geological success, 398.
--- Alex., on pediculariae, 191.
Algae of New Zealand, 338.
Alligators, males, fighting, 39.
Alternate generations, 387.
Amblyopsis, blind fish, 112.
American, North, productions allied to those of Europe, 333.
---, boulders and glaciers of, 335.
---, South, no modern formations on west coast, 272.
Ammonites, sudden extinction of, 297.
Anagallis, sterility of, 236.
Analogy of variations, 127.
Anchises, 345.
Andaman Islands inhabited by a toad, 350.
Animals, not domesticated from being variable, 13.
--- domestic, descended from several stocks, 14.
---, acclimatisation of, 112.
--- of Australia, 90.
--- with thicker fur in cold climates, 107.

446  CUVIER.  INDEX.  EXTINCTION.

Cuvier, on fossil monkeys, 283, 284.
—— Fred., on instinct, 205.
Cyclostoma, resisting salt water, 353.

D.

Dana, Prof., on blind cave-animals, 111.
——, on relations of crustaceans of Japan, 334.
——, on crustaceans of New Zealand, 338.
Dawson, Dr., on eozone, 287.
De Candolle, Aug. Pyr., on struggle for existence, 49.
——, on umbelliferae, 116.
——, on general affinities, 379.
De Candolle, Alph., on the variability of oaks, 40.
——, on low plants, widely dispersed, 358.
——, on widely-ranging plants being variable, 43.
——, on naturalisation, 89.
——, on winged seeds, 117.
——, on Alpine species suddenly becoming rare, 135.
——, on distribution of plants with large seeds, 326.
——, on vegetation of Australia, 340.
——, on fresh-water plants, 345.
——, on insular plants, 347.
Degradation of rocks, 266.
Denudation, rate of, 268.
—— of oldest rocks, 287.
—— of granitic areas, 274.
Devonian system, 303.
Dianthus, fertility of crosses, 243.
Dimorphism in plants, 55, 252.
Dirt on feet of birds, 328.
Dispersal, means of, 323.
—— during Glacial period, 330.
Distribution, geographical, 316.
——, means of, 323.
Disease, effects of, under nature, 108.
Divergence of character, 86.
Diversification of means for same general purpose, 153.
Division, physiological, of labour, 89.
Dog, resemblance of jaw to that of the Thylacinus, 374.
Dogs, hairless, with imperfect teeth, 9.
—— descended from several wild stocks, 15.

——, fertility of breeds together, 241.
——, of crosses, 256.
——, proportions of body in different breeds, when young, 392.
Domestication, variation under, 5.
Double flowers, 230.
Downing, Mr., on fruit-trees in America, 66.
Dragon-flies, intestines of, 147.
Drift-timber, 326.
Driver-ant, 232.
Drones killed by other bees, 164.
Duck, domestic, wings of, reduced, 8.
——, beak of, 183.
——, logger-headed, 140.
Duckweed, 344.
Dugong, affinities of, 365.
Dung-beetles with deficient tarsi, 108.
Dytiscus, 345.

E.

Earl, Mr. W., on the Malay Archipelago, 351.
Ears, drooping, in domestic animals, 8.
——, rudimentary, 400.
Earth, seeds in roots of trees, 326.
—— charged with seeds, 328.
Echinodermata, their pedicellariae, 191.
Eciton, 230.
Economy of organisation, 117.
Edentata, teeth and hair, 115.
——, fossil species of, 417.
Edwards, Milne, on physiological division of labour, 89.
——, on gradations of structure, 156.
——, on embryological characters, 368.
Eggs, young birds escaping from, 68.
Egypt, productions of, not modified, 169.
Electric organs, 150.
Elephant, rate of increase, 51.
——, of Glacial period, 113.
Embryology, 386.
Eoozone Canadense, 287.
Epilepsy inherited, 108.
Existence, struggle for, 48.
——, conditions of, 167.
Extinction, as bearing on natural selection, 96.
—— of domestic varieties, 93.
——, 293.
EYE. | INDEX. | GALEOPTHECUS.
---|---|---
Eye, structure of, 144. | Flowers, of composite and umbelliferous, 116, 173. | 447
——, correction for aberration, 163. | ———, beauty of, 161. |
Eyes reduced in moles, 110. | ———, double, 230. |
F. | Flyash formation, destitute of organic remains, 271. |
Fabre, M., on hymenoptera fighting, 69. | Forbes, Mr. D., on glacial action in the Andes, 335. |
——, on parasitic sphen, 216. | E., on colours of shells, 107. |
——, on Sitaris, 394. | ———, on abrupt range of shells in depth, 135. |
Falconer, Dr., on naturalisation of plants in India, 51. | ———, on poverty of paleontological collections, 270. |
——, on elephants and mastodons, 306. | ———, on continuous succession of genera, 293. |
—— and Cautley, on mammals of sub-Himalayan beds, 311. | ———, on continental extensions, 323. |
Falkland Islands, wolf of, 351. | ———, on distribution during Glacial period, 330. |
Faults, 268. | ———, on parallelism in time and space, 361. |
Fauns, marine, 317. | Forests, changes in, in America, 58. |
Fear, instinctive, in birds, 211. | Formation, Devonian, 305. |
Feet of birds, young molluscs adhering to, 345. | ———, Cambrian, 287. |
Fertilisation variously effected, 154, 161. | Formations, thickness of, in Britain, 268, 269. |
Fertility of hybrids, 238. | ———, intermittent, 277. |
——, from slight changes in conditions, 252. | Formica rufescens, 216. |
Fertility of crossed varieties, 255. | ———, sanguinea, 217. |
Fir-trees destroyed by cattle, 56. | ———, flava, neuter of, 231. |
——, pollen of, 164. | Forms, lowly organised, long enduring, 99. |
Fish, flying, 140. | Frena, ovigerous, of cirripedes, 148. |
——, telostean, sudden appearance of, 285. | Fresh-water productions, dispersal of, 343. |
——, eating seeds, 327, 346. | Fries, on species in large genera being closely allied to other species, 45. |
——, fresh-water, distribution of, 343. | Frigate-bird, 142. |
Fishes, ganoid, now confined to fresh water, 83. | Frogs on islands, 350. |
——, electric organs of, 150. | Fruit-trees, gradual improvement of, 27. |
——, ganoid, living in fresh water, 296. | ———, in United States, 66. |
——, of southern hemisphere, 338. | ———, varieties of, acclimatised in United States, 114. |
Flat-fish, their structure, 188. | Fuci, crossed, 249, 343. |
Flight, powers of, how acquired, 140. | Fur, thicker in cold climates, 107. |
Flower, Prof., on the Larynx, 190. | G. |
——, on the resemblance between the jaws of the dog and Thylacinus, 375. | ———, productions of, 353, 355. |
——, on the homology of the feet of certain marsupials, 382. | Galaxies, its wide range, 343. |
Flowers, structure of, in relation to crossing, 73. | Galeopthecus, 139.
Game, increase of, checked by vermin, 55.
Gärtner, on sterility of hybrids, 237, 241.
—, on reciprocal crosses, 243.
—, on crossed maize and verbascum, 257, 258.
—, on comparison of hybrids and mongrels, 259, 260.
Gaudry, Prof., on intermediate genera of fossil mammals in Attica, 301.
Geese, fertility when crossed, 307.
—, upland, 142.
Geikie, Mr., on subaerial denudation, 267.
Genealogy, important in classification, 369.
Generations, alternate, 387.
Geoffroy St. Hilaire, on balancement, 117.
—, on homologous organs, 382.
—, Isidore, on variability of repeated parts, 118.
—, on correlation, in monstrousities, 9.
—, on correlation, 115.
—, on variable parts being often monstrous, 122.
Geographical distribution, 316.
Geography, ancient, 427.
Geology, future progress of, 427.
—, imperfection of the record, 427.
Gervais, Prof., on Typothérium, 302.
—, structure of, 177.
Glacial period, 330.
—, affecting the North and South, 335.
Glands, mammary, 189.
Gmelin, on distribution, 330.
Godwin-Austen, Mr., on the Malay Archipelago, 280.
Goethe, on compensation of growth, 117.
Gomphia, 174.
Gooseberry, grafts of, 246.
Gould, Dr. Aug. A., on land-shells, 353.
—, Mr., on colours of birds, 107.
—, on instincts of cuckoo, 214.
—, on distribution of genera of birds, 358.
Gourds, crossed, 258.

Graba, on the Uria larymyns, 72.
Grafting, capacity of, 245, 246.
Grande, areas of denuded, 274.
Grasses, varieties of, 88.
Gray, Dr. Asa, on the variability of oaks, 40.
—, on man not causing variability, 62.
—, on sexes of the holly, 74.
—, on trees of the United States, 79.
—, on naturalised plants in the United States, 89.
—, on activation, 174.
—, on Alpine plants, 330.
—, on rarity of intermediate varieties, 136.
—, Dr. J. E., on striped mule, 128.
Grebe, 142.
Grimm, on asexual reproduction, 387.
Groups, aberrant, 378.
Grouse, colours of, 66.
—, red, a doubtful species, 38.
Growth, compensation of, 117.
 Günther, Dr., on flat-fish, 187.
—, on prehensile tails, 189.
—, on the fishes of Panama, 317.
—, on the range of fresh-water fishes, 343.
—, on the limbs of Lepidosiren, 399.

H.
Haast, Dr., on glaciers of New Zealand, 355.
Habit, effect of, under domestication, 8.
—, effect of, under nature, 108.
—, diversified, of same species, 141.
Häckel, Prof., on classification and the lines of descent, 381.
Hair and teeth, correlated, 115.
Halitherium, 302.
Harcourt, Mr. E. V., on the birds of Madeira, 348.
Hartung, M., on boulders in the Azores, 328.
Hazel-nuts, 325.
Hearne, on habits of bears, 141.
Heath, changes in vegetation, 65.
Heer, Oswald, on ancient cultivated plants, 13.
—, on plants of Madeira, 83.
Helianthemum, 174.
HELIX.

Helix pomatia, 355.
Helmholtz, M., on the imperfection of the human eye, 163
Helosciadium, 325.
Hemionus, striped, 128.
Hensen, Dr., on the eyes of Cephalopoda, 152.
Herbert, W., on struggle for existence, 49.
——, on sterility of hybrids, 238.
Hector, Dr., on glaciers of New Zealand, 335.
Hermaphrodites crossing, 76.
Helix, resisting salt water, 353.
Heron eating seed, 346.
Heron, Sir R., on peacocks, 70.
Heusinger, on white animals poisoned by certain plants, 9.
Hewitt, Mr., on sterility of first crosses, 249.
Hildebrand, Prof., on the self-sterility of Corydalis, 238.
Hilgendorf, on intermediate varieties, 275.
Himalaya, glaciers of, 335.
——, plants of, 337.
Hippeastrum, 238.
Hippocampus, 189.
Hofmeister, Prof., on the movements of plants, 197.
Holly-trees, sexes of, 73.
Hooker, Dr., on trees of New Zealand, 78.
——, on acclimatisation of Himalayan trees, 112.
——, on flowers of umbelliferae, 116.
——, on the position of owls, 172.
——, on glaciers of Himalaya, 335.
——, on algae of New Zealand, 338.
——, on vegetation at the base of the Himalaya, 388.
——, on plants of Tierra del Fuego, 336.
——, on Australian plants, 337, 355.
——, on relations of flora of America, 340.
——, on flora of the Antarctic lands, 341, 354.
——, on the plants of the Galapagos, 349, 354.
——, on glaciers of the Lebanon, 355.
——, on man not causing variability, 62.

INDEX.

Hooker, Dr., on plants of mountains of Fernando Po, 337.
Hooks on palms, 158.
——, on seeds, on islands, 349.
Hopkins, Mr., on denudation, 274.
Hornbill, remarkable instinct of, 234.
Horns, rudimentary, 400.
Horse, fossil, in La Plata, 294.
——, proportions of, when young, 392.
Horses destroyed by flies in Paraguay, 56.
——, striped, 128.
Horticulturists, selection applied by, 23.
Huber, on cells of bees, 224.
——, P., on reason blended with, instinct, 205.
——, on habitual nature of instincts, 206.
——, on slave-making ants, 218.
——, on Melipona domestica, 220.
Hudson, Mr., on the Ground-Woodpecker of La Plata, 142.
——, on the Molothrus, 215.
Humble-bees, cells of, 221.
Hunter, J., on secondary sexual characters, 119.
Hutton, Captain, on crossed geese, 240.
Huxley, Prof., on structure of hermaphrodites, 79.
——, on the affinities of the Sirenia, 302.
——, on forms connecting birds and reptiles, 302.
——, on homologous organs, 386.
——, on the development of aphis, 390.
Hybrids and mongrels compared, 259.
Hybridism, 235.
Hydra, structure of, 147.
Hymenoptera, fighting, 69.
Hymenopterous insect, diving, 142.
Hyoseris, 173.

INDIVIDUALS.

I.

Ibiza, 118.
Icebergs transporting seeds, 329.
Increase, rate of, 59.
Individuals, numbers favourable to selection, 30.
450

INDIVIDUALS.

Individuals, many, whether simultaneously created, 322.
Inheritance, laws of, 10.
—- at corresponding ages, 10, 67.
Insects, colour of, fitted for their stations, 66.
—- sea-side, colours of, 107.
—- blind, in caves, 110.
—- luminous, 151.
—- their resemblance to various objects, 181.
—- neuter, 230.
Instinct, 205.
—- not varying simultaneously with structure, 229.
Instincts, domestic, 209.
Intercrossing, advantages of, 76, 251.
Islands, oceanic, 347.
Isolation favourable to selection, 81.

J.

Japan, productions of, 334.
Java, plants of, 337.
Jones, Mr. J. M., on the birds of Bermuda, 348.
Jourdain, M., on the eye-spots of star-fishes, 144.
Jukes, Prof., on subserial denudation, 287.
Jussieu, on classification, 367.

K.

Kentucky, caves of, 111.
Kerguelen-land, flora of, 341, 354.
Kidney-bean, acclimatisation of, 114.
Kidneys of birds, 115.
Kirby, on tarsis deficient in beetles, 105.
Knight, Andrew, on cause of variation, 5.
Kölreuter, on Intercrossing, 76.
—- on the barberry, 77.
—- on sterility of hybrids, 237.
—- on reciprocal crosses, 243.
—- on crossed varieties of nicotiana, 258.
—- on crossing male and hermaphrodite flowers, 397.

L.

Lamarck, on adaptive characters, 373.
Lancelet, 99.
—- eyes of, 145.

LANDOIS, on the development of the wings of insects, 148.
Land-shells, distribution of, 353.
—- of Madeira, naturalised, 357.
—- resisting salt water, 353.
Languages, classification of, 371.
Lankester, Mr. E. Ray, on Longevity, 169.
—- on homologies, 385.
Lapse, great, of time, 266.
Larve, 388, 389.
Laurel, nectar secreted by the leaves, 73.
Laurentian formation, 287.
Laws of variation, 106.
Leech, varieties of, 59.
Leguminose, nectar secreted by glands, 73.
Leibnitz' attack on Newton, 421.
Lepidosiren, 83, 303.
—- limbs in a nascent condition, 398, 399.
Lewes, Mr. G. H., on species not having changed in Egypt, 169.
—- on the Salamandra salamandra, 397.
—- on many forms of life having been at first evolved, 425.
Lice, struggle for, 49.
Lingula, Silurian, 286.
Linnaeus, aphorism of, 385.
Lion, mane of, 69.
—- young of, striped, 388.
Lobelia fulgens, 57, 77.
—- sterility of crosses, 238.
Lockwood, Mr., on the ova of the Hippocampus, 189.
Locusts transporting seeds, 327.
Logan, Sir W., on Laurentian formation, 287.
Lowe, Rev. R. J., on locusts visiting Madeira, 327.
Lowness of structure connected with variability, 118.
—- related to wide distribution, 359.
Lubbock, Sir J., on the nerves of cocons, 35.
—- on secondary sexual characters, 124.
—- on a diving hymenopterous insect, 142.
—- on affinities, 280.
—- on metamorphoses, 388, 389.
Lucas, Dr. P., on inheritance, 9.
Lucas, Dr. P., on resemblance of child to parent, 261.
Lund and Clausen, on fossils of Brazil, 310.
Lyell, Sir C., on the struggle for existence, 49.
—, on modern changes of the earth, 75.
—, on terrestrial animals not having been developed on islands, 180.
—, on a carboniferous land-shell, 271.
—, on strata beneath Silurian system, 287.
—, on the imperfection of the geological record, 289.
—, on the appearance of species, 289.
—, on Barrande’s colonies, 291.
—, on tertiary formations of Europe and North America, 298.
—, on parallelism of tertiary formations, 301.
—, on transport of seeds by ice-crests, 328.
—, on great alternations of climate, 342.
—, on the distribution of fresh-water shells, 345.
—, on land-shells of Madeira, 357.
Lyell and Dawson, on fossilized trees in Nova Scotia, 278.
Lythrum salicaria, trimorphic, 254.

M.
Macleay, on analogical characters, 373.
Macrauchenia, 302.
M’Donnell, Dr., on electric organs, 150.
Madeira, plants of, 83.
—, beetles of, wingless, 109.
—, fossil land-shells of, 311.
—, birds of, 348.
Maggie tame in Norway, 209.
Males fighting, 69.
Maize, crossed, 237.
Malay Archipelago compared with Europe, 286.
—, mammals of, 352.
Malm, on flat-fish, 188.
Malpighiaceae, small imperfect flowers of, 173.

Malpighiaeae, 387.
Mammæ, their development, 189.
—, rudimentary, 397.
Mammals, fossil, in secondary formation, 283.
—, insular, 351.
Man, origin of, 428.
Manatee, rudimentary nails of, 400.
Marsupials of Australia, 90.
—, structure of their feet, 382.
—, fossil species of, 310.
Martens, M., experiment on seeds, 325.
Martin, Mr. W. C., on striped mules, 129.
Masters, Dr., on Saponaria, 174.
Matteucci, on the electric organs of rays, 150.
Mattiaiola, reciprocal crosses of, 244.
Maurandia, 197.
Means of dispersal, 323.
Mellitopon domestica, 220.
Merrell, Dr., on the American cuckoo, 212.
Metamorphism of oldest rocks, 287.
Mice destroying bees, 56.
—, acclimatisation of, 113.
—, tails of, 189.
Miller, Prof., on the cells of bees, 221, 224.
Mirabilis, crosses of, 243.
Mistle-thrush, 59.
Mistletoe, complex relations of, 2.
Mivart, Mr., on the relation of hair and teeth, 115.
—, on the eyes of cephalopods, 151.
—, various objections to Natural Selection, 174.
—, on abrupt modifications, 201.
—, on the resemblance of the mouse and antechinus, 373.
Mocking-thrush of the Galapagos, 357.
Modification of species not abrupt, 424.
Moles, blind, 110.
Moth, habits of, 215.
Mongreleis, fertility and sterility of, 295.
— and hybrids compared, 259
Monkeys, fossil, 284, 285.
Moncachthus, 372.
Mons, Van, on the origin of fruit trees, 21.

P.

Pacific Ocean, faunas of, 317.
Pasciui, on electric organs, 151.
Paley, on no organ formed to give pain, 163.
Pallas, on the fertility of the domesticated descendants of wild stocks, 241.
Palm with hooks, 158.
Papaver bracteatum, 174.
Paraguay, cattle destroyed by flies, 56.
Parasites, 215.
Partridge, with ball of earth attached to foot, 328.
Parts greatly developed, variable, 119.
Parus major, 141.
Passiflora, 238.
Peaches in United States, 66.
Pear, grafts of, 246.
Pedicellariae, 191.
Pelargonium, flowers of, 166.
—, sterility of, 239.
Pelvis of women, 115.
Peloria, 116.
Period, glacial, 330.

PETrels, habits of, 142.
Phasianus, fertility of hybrids, 240.
Pheasant, young, wild, 211.
Pictet, Prof., on groups of species suddenly appearing, 282.
—, on rate of organic change, 291.
—, on continuous succession of genera, 293.
—, on change in latest tertiary forms, 278.
—, on close alliance of fossils in consecutive formations, 306.
—, on early transitional links, 283.
Pierce, Mr., on varieties of wolves, 71.
Pigeons with feathered feet and skin between toes, 9.
—, breeds described, and origin of, 15.
—, breeds of, how produced, 28, 30.
—, tumbler, not being able to get out of egg, 68.
—, reverting to blue colour, 127.
—, young of, 392.
Pigs, black, not affected by the paint-root, 9.
—, modified by want of exercise, 159.
Pistil, rudimentary, 397.
Plants, poisonous, not affecting certain coloured animals, 9.
—, selection applied to, 27.
—, gradual improvement of, 27.
—, not improved in barbarous countries, 27.
—, dimorphic, 35, 253.
—, destroyed by insects, 53.
—, in midst of range, have to struggle with other plants, 60.
—, nectar of, 73.
—, fleshy, on sea-shores, 107.
—, climbing, 147, 196.
—, fresh-water, distribution of, 345.
—, low in scale, widely distributed, 359.
Pleuronecide, their structure, 186.
Plumage, laws of change in sexes of birds, 70.
Plums in the United States, 66.
Pointer dog, origin of, 25.
—, habits of, 210.
Poison not affecting certain coloured animals, 9.

—, similar effect of, on animals and plants, 425.
Pollen of fir-trees, 164.

— transported by various means, 154, 161.
Pollinia, their development, 195.
Polyzoa, their avicularia, 193.
Poole, Col., on striped hemionus, 128.
Potamogeton, 346.
Pouchet, on the colours of flat-fish, 188.
Prestwich, Mr., on English and French eocene formations, 300.
Protocotylus, 142.
Proteolops, 118.
Protocols, 112.
Psychology, future progress of, 428.
Pyrgoma, found in the chalk, 284.

Q.
Quagga, striped, 129.
Quatrenges, M., on hybrid moths, 240.
Quercus, variability of, 40.
Quince, grafts of, 246.

R.
Rabbit, disposition of young, 211.
Races, domestic, characters of, 12
Race-horses, Arab, 26

—, English, 323.
Radcliffe, Dr., the electrical organs of the toardo, 156.
Ramond, on plants of Pyreennes, 331.
Ramsay, Prof., on subaerial denudation, 267.

—, on thickness of the British formations, 268, 269.

—, on faults, 268.
Ramsay, Mr., on instincts of cuckoo, 213.
Ratio of increase, 50.
Rats supplanting each other, 59.

—, acclimatisation of, 113.

—, blind, in cave, 110.
Rattle-snake, 192.
Reason and instinct, 205.
Recapitulation, general, 404.
Reciprocity of crosses, 243.
Record, geological, imperfect, 264.

Rengger, on flies destroying cattle, 56.
Reproduction, rate of, 50.
Resemblance, protective, of insects, 181.

— to parents in mongrels and hybrids, 260.
Reversion, law of inheritance, 11.

—, in pigeons, to blue colour, 127.
Rhododendron, sterility of, 239.
Richaud, Prof., on Aspicarpus, 367.
Richardson, Sir J., on structure of squirrels, 139.

—, on fishes of the southern hemisphere, 338.
Robinia, grafts of, 246.
Rodents, blind, 110.
Rogers, Prof., Map of N. America, 274.
Rudimentary organs, 397.
Rudiments important for classification, 397.
Rütimeyer, on Indian cattle, 14, 241.

S.
Salamandra atra, 397.
Saliva used in nests, 328.
Salvin, Mr., on the beaks of ducks, 184.
Sageret, on grafts, 246.
Salmons, males fighting, and hooked jaws of, 69.
Salt water, how far injurious to seeds, 325.

— not destructive to land-shells, 353.
Salter, Mr., on early death of hybrid embryos, 248.
Sauroraphus sulphuratus, 141.
Schacht, Prof., on Phyllotaxy, 173.
Schödl, on blind insects, 110.

—, on flat-fish, 136.
Schlegel, on snakes, 115.
Schöbl, Dr., on the ears of mice, 172.
Scott, Mr., on the self-sterility of orchids, 238.

—, on the crossing of varieties of verbascum, 258.
Sea-water, how far injurious to seeds, 325.

— not destructive to land-shells, 325.
Searight, Sir J., on crossed animals, 15.
Sedgwick, Prof., on groups of species suddenly appearing, 282.
Seedlings destroyed by insects, 53.
Seeds, nutriment in, 60.
—, winged, 117.
—, means of dissemination, 154, 161, 327, 328.
—, power of resisting salt water, 325.
—, in crops and intestines of birds, 326, 327.
—, eaten by fish, 327, 346.
—, in mud, 345.
—, hooked, on islands, 349.
Selection of domestic products, 22.
—, principle not of recent origin, 27.
—, unconscious, 27.
—, natural, 62.
—, sexual, 69.
—, objections to term, 63.
—, natural, has not induced sterility, 247.
Sexes, relations of, 69.
Sexual characters variable, 123.
—, selection, 69.
Sheep, Merino, their selection, 23.
—, two sub-breeds, unintentionally produced, 26.
—, mountain varieties of, 59.
Shells, colours of, 107.
—, hinges of, 154.
—, littoral, seldom embedded, 270.
—, fresh-water, long retain the same forms, 308.
—, fresh-water, dispersal of, 344.
—, of Madeira, 349.
—, land, distribution of, 349.
—, land, resisting salt water, 325.
Shrew-mouse, 373.
Silene, infertility of crosses, 243.
Silliman, Prof., on blind rat, 110.
Sirenia, their affinities, 302.
Sitaris, metamorphosis of, 394.
Skulls of young mammals, 159, 384.
Slave-making instinct, 216.
Smith, Col. Hamilton, on striped horses, 129.
—, Mr. Fred., on slave-making ants, 217.
—, on neuter ants, 231.
Smith, Dr., on the Polyzoa, 193.
Snake, with tooth for cutting through egg-shell, 214.
Somerville, Lord, on selection of sheep, 25.
Sorbus, grafts of, 246.
Sorex, 373.
Spaniel, King Charles’s breed, 25.
Specialisation of organs, 98.
Species, polymorphic, 35.
—, dominant, 43.
—, common, variable, 42.
—, in large genera variable, 44.
—, groups of, suddenly appearing, 282, 285.
—, beneath Silurian formations, 287.
—, successively appearing, 290.
—, changing simultaneously throughout the world, 297.
Spencer, Lord, on increase in size of cattle, 26.
—, Herbert, Mr., on the first steps in differentiation, 100.
—, on the tendency to an equilibrium in all forces, 252.
Sphex, parasitic, 216.
Spiders, development of, 390.
Sports in plants, 8.
Sprengel, C. C., on crossing, 76.
—, on ray-leaves, 118.
Squallodon, 302.
Squirrels, gradations in structure, 139.
Staffordshire, beech, changes in, 55.
Stag-beetles, fighting, 69.
Star-fishes, eyes of, 144.
—, their pedicellariae, 192.
Sterility from changed conditions of life, 7.
—, of hybrids, 236.
—, laws of, 241.
—, causes of, 247.
—, from unfavourable conditions, 250.
—, not induced through natural selection, 247.
St. Helena, productions of, 347.
—, on classification, 368.
St. John, Mr., on habits of cats, 209.
Sting of bee, 163.
Stocks, aboriginal, of domestic animals, 14.
