The Nautical Magazine first appeared in 1832, published monthly at the price of one shilling. It aimed to advance 'the safety of seamen', with a focus on the merchant marine, and a readership of professional seafarers. The founding editor, A.B. Becher (1796–1876), served for many years under the distinguished hydrographer Sir Francis Beaufort, and the magazine reflected Beaufort’s interests by reporting on new charts, research on weather and the oceans, astronomy and navigation, and statistics on wrecks and the Lifeboat Institution. The content regularly included serialised accounts of voyages, descriptions of distant countries, notes on new shipping regulations, and discussion of the latest technologies. There were also reports on current affairs such as (during the Victorian period) the searches for Sir John Franklin’s lost Arctic expedition, the Crimean War and the Suez Canal project. Astute editorial decisions ensured that the content mirrored the evolving concerns of readers, enabling 'the Nautical' to remain popular for nearly two centuries. It is a fascinating source of data, news and opinions for maritime, economic and social historians, genealogists, and shipping enthusiasts.

The Nautical Magazine and Naval Chronicle for 1856

The Nautical Magazine first appeared in 1832, and was published monthly well into the twenty-first century. It covers a wide range of subjects, including navigation, meteorology, technology and safety. An important resource for maritime historians, it also includes reports on military and scientific expeditions and on current affairs. The 1856 volume is still overshadowed by the aftermath of the disastrous Franklin expedition to navigate the North-West Passage; ironically, the Suez Canal proposed by de Lesseps, and the possibility of a Panama canal, also feature prominently. Another report discusses a projected telegraph to the Middle East and India, while an account of a voyage to the Crimea comments that 'Gallipoli … has little to recommend it'. Other topics covered include the sailing times of Atlantic packets and steamers, the Pacific and Indian oceans, Sydney docks, Aboriginal culture and awards received by the editor in recognition of his invention of an 'artificial horizon'.
Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library and other partner libraries, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection brings back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
