THE CONTENTS.

CHAP. I. Of the nature and origin of wealth and commerce.

LAND and labour, the sources of wealth; and in countries deemed wealthy, labour hath the greatest share

Things in general are valued, according to the land, labour and skill required to produce them

Natural products less permanent in their value, than artificial

The price of labour, the chief standard that regulates the values of all things

Some estimate of the value of labour

That charitable contributions are necessary

Different professions have a right to better wages or stipends, in proportion to the cost of education, the genius, skill and confidence required in them

Origin and usefulness of arts and commerce; usefulness of keeping to distinct trades, and of the various classes of dealers. The excellency of many of the English artists, and the great advantages thence accruing to their country

Of the comparative riches or wealth of nations. Great-Britain possessed of many natural and peculiar advantages

In a commercial country, sumptuary laws might prove hurtful

The good effects of industry, and some of the means of promoting it. Public spirit a great source of national happiness

CHAP.
The CONTENTS.

CHAP. II. OF MONEY AND COINS.

The inconvenience and insufficiency of mere barter, page 34, 35

Money, a standard measure of the values of all things, and an equivalent for them 36 to 38

How money differs from other measures 39, 40

and from bills * 43

Of some requisite properties in the material of money 40 to 48

Metals the fittest materials of money; and of these only silver and gold, these metals being universally of equal goodness 43 to 48

Usefulness of coins: Their names, and those of integral sums of money, have been taken chiefly from weights 48, 49

Of our present weights, and divisions of money 50, 51

The coins in most countries have been, at different times, debased; but the same names still continued 52, 53

Standard of monies, particularly explained 53 to 56

Why coins and plate have alloy 57

That there can be but one standard of money 57, 58

Silver the money or standard measure of all Europe; the fittest material hitherto known for money; a fit standard, though its plenty varies. Gold too dear for a standard 58 to 64

Gold coins should pass as money, but under certain restrictions 64

Of Tokens, or base coins 65, 66

Money finds its own value, according to the whole quantity of it in circulation; and this value is not controulable by any laws 66 to 72

Price of bullion not according to the prime cost at the mines 73, 74

Money alters its value by slow degrees 75, 76

Why the effect of an increase of money, is not more sensibly felt; and why the prices of commodities have not rose in proportion to the increase of money 76 to 79

A nation having no foreign commerce, will not stand in need of any specific quantity of money 80 to 83
viii The CONTENTS.

Any sudden fluctuation of money would be pernicious, page 83 to 86

Ballance of trade, what 86 to 89
The quantity of money every where, naturally finds a certain level or proportion 89 to 95

Any artificial methods of increasing tale money, pernicious 95 to 99

Hoarding the precious metals, beneficial; and hence the usefulness of encouraging a fashionable use of plate, 99, 100

Of Banks: Instituted chiefly to prevent the abuses from bad coins, and legal adulterations of money: Bank money, and Agio, what 100 to 103

Complaints of the want of money, whence 103 to 106

C H A P. III. Of exchanges.

Bills of exchange, what: Of vast advantage to commerce 107 to 114

Par of exchange, what: This par difficult to be ascertained 114 to 119

Course of exchange, what 119, 120

Price of bullion, how influenced 121

National interest how influenced by the course of exchange 121 to 123

The course of exchange influenced by various causes 124 to 126

Bullion not exported till the exchange is at a certain limit from par 126 to 128
