Maritime Exploration

This series includes accounts, by eye-witnesses and contemporaries, of voyages by Europeans to the Americas, Asia, Australasia and the Pacific during the colonial period. Driven by the military and commercial interests of powers including Britain, France and the Netherlands, particularly the East India Companies, these expeditions brought back a wealth of information on climate, natural resources, topography, and distant civilisations. Their detailed observations provide fascinating historical data for climatologists, ecologists and anthropologists, and the accounts of the mariners' experiences on their long and dangerous voyages are full of human interest.

The Three Voyages of Captain James Cook Round the World

During Charles Darwin's 1831–6 voyage on the *Beagle*, his on-board library included 'Cook's voyages' (the edition is not specified). This illustrated 1821 edition, in seven volumes, is representative of the versions available in the early nineteenth century. Volumes 5–7 cover the third Pacific voyage of James Cook (1728–79), which began in July 1776 and ended in his death in Hawaii. Its objective was to search for the Pacific end of the North-West Passage. Volume 6 contains Cook's journal of the voyage from July 1777 to January 1779. From Tahiti, he sailed via Hawaii to Nootka Sound, and reached the Bering Strait in June 1778. The expedition then explored the Aleutian Islands and the Alaskan coast, reaching 70 degrees north, but by late August fog and snow meant the mission had to be abandoned for that year. The ships sailed south to Kamchatka and then back to Hawaii.
Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library and other partner libraries, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection brings back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
