

Contents

<i>Foreword</i>	<i>page</i> ix
<i>Preface</i>	xiii
1 Nanoplasmonics	1
1.1 Localized Plasmon Resonance	1
1.2 Gold and Other Materials in Plasmonics	14
1.3 Getting Started in Thermoplasmonics	28
References	30
2 Thermodynamics of Metal Nanoparticles	36
2.1 Mechanisms and Governing Equations	36
2.2 Steady State	43
2.3 Transient Evolution	55
2.4 Harmonic Heating	57
2.5 Pulsed Heating	64
2.6 Summary	78
References	78
3 Numerical Simulation Techniques	81
3.1 Absorption Cross Section of a Nanoparticle	81
3.2 Temperature of a Nanoparticle in the Steady State	89
3.3 Temperature Anywhere, and Not Necessarily in the Steady State	94
References	99
4 Thermal Microscopy Techniques	101
4.1 Introduction	101
4.2 Fluorescence Microscopy	103
4.3 Microwave Spectroscopy of Nanodiamonds via Fluorescence Measurements	120
4.4 Techniques Sensitive to Refractive Index Variations	125
4.5 Raman Scattering Spectroscopy	129
4.6 X-ray Absorption Spectroscopy	132
4.7 Scanning Thermal Microscopy	132
4.8 Other Techniques	134
4.9 Conclusion	136
References	136

5 Thermal-Induced Processes	143
5.1 Chemical Reaction	143
5.2 Brownian Motion	144
5.3 Thermophoresis	146
5.4 Liquid Superheating and Liquid–Gas Phase Transition	162
5.5 Bubble Dynamics, General Considerations and Physical Laws	169
5.6 Bubble Formation and Dynamics under Pulsed Illumination	172
5.7 Bubble Formation and Dynamics under CW Illumination	189
5.8 Stress Wave Generation	201
5.9 Refractive Index Variation	205
5.10 Fluid Convection	208
5.11 Reshaping of Nanoparticles	210
5.12 Thermal Radiation	212
References	214
6 Applications	223
6.1 Protein Denaturation: The Very First Application of Thermoplasmonics (1999)	223
6.2 Plasmonic Photothermal Therapy (PPTT)	224
6.3 Drug and Gene Delivery (DGD)	232
6.4 Heat-Assisted Magnetic Recording (HAMR)	236
6.5 Photoacoustic Imaging (PAI)	242
6.6 Nanochemistry	248
6.7 Photothermal Imaging (PTI)	256
6.8 Thermoplasmonics for Cell Biology	265
References	268
Appendix A Dimensional Analysis	282
Appendix B Thermodynamical Constants	284
Appendix C Thermal Green’s Function for a Three-Layer System	287
<i>Index</i>	290
