Subject Index

- Abbe, 383
 partial dispersion number, 326
 sine condition, 218, 588, 712, 734
 expressed in canonical coordinates, 229
 infinitely distant object, 219
 telescopic system, 220
 theory of microscope imaging, 425, 660
 V-number, 326, 426, 910
- aberration
 aperture- and field-dependent
 aberration function, 359
 astigmatism, 288
 astigmatic lines, 289
 circle of least-confusion, 289
 field-dependent wavefront aberration, 354
 non-circularly symmetric system, 372
 ray rotation, 291
 chromatic, 324
 achromatic doublet, 330
 achromatic optical power, 335
 axial colour, 328
 change of magnification, 328
 change of power, 326
 chromatic aberration thin lens, 328
 chromatic wavefront aberration, 328
 Conrady's formula for finite rays, 330
 correction for pulsed illumination, 337
 landscape lens, 435
 lateral colour, 328
 classification of aberrations, 276
 coma, 286
 contour plot, 286
 wavefront construction, 287
 distortion, 283
 distortion patterns non-circularly symmetric system, 370
 double Zernike aberration expansion, 361
 field curvature, 283
 flat-field system, 451
 number of aberrations, 277
- paraxial terms
 defocusing, 280
 magnification change, 282
- Seidel
 Lagrange invariant, 297, 302, 307, 316, 328, 427, 488, 489, 514, 523, 524
 Petzval sum, 300, 301
 photographic landscape lens, 436
 plane-parallel plate, 320
 pupil aberration, 307
 refraction invariants, 297
 spherical aberration of the pupil, 309
 stigmatic imaging conditions, 304
 third-order aberration coefficients, 295
 third-order theory, 266, 292, 384
 wavefront aberration formula, 299
- spherical aberration, 284
 best focus, 286
 caustic figure, 285
 transverse pattern, 286
 stationarity in three-dimensional space, 734
- thin lens
 aberration with central stop, 311
 aberration with remote stop, 312
 absence of coma, 316
 bending factor, 311, 426
 magnification factor, 311
 optimum bending, 315
- transverse aberration
 caustic surface, 267
 derived from wavefront aberration, 365
 field-averaged blur, 370
 geometric blur, 271
 gradient of wavefront aberration, 227
 involute, 267
 Lukosz polynomials, 366
 rms blur value, 365, 369
- transverse aberration components, 224
- wavefront aberration
 change of reference sphere, 226
 definition, 224
 derived from angle characteristic function, 227
 evolute, 267
 field-averaged wavefront variance, 364
 Maréchal criterion, 584
 root-mean-square value (rms), 425
 stochastic phase screen, 768
 total aberration formulas
 Hopkins/Welford, 357
 wavefront aberration with respect to a finite ray, 351
 Zernike expansion complex pupil function, 590
 Zernike expansion phase function, 589
- achromatic doublet, 330, 426
 achromatic collimator, 431
 apochromatic, 332
 cemented (De Grateloup), 426
 Chevalier, 426
 'crown-in-front' doublet, 428
 Dollond, 383, 426

- anisotropic medium
 biaxial material, 818
 conical refraction, 138
 conical assembly of ray vectors, 140
 observation of external conical refraction, 142
 observation of internal conical refraction, 142
 quadratic expansion optical indicatrix, 139
 eigenvalue equations ($\hat{\mathbf{k}}$ vector), 110, 118
 eigenvalue equations ($\hat{\mathbf{s}}$ vector), 126, 129
 electric and magnetic field vectors (biaxial medium), 116
 electric eigenstates biaxial medium, 123
 extraordinary and ordinary wave, 121
 extraordinary waves biaxial medium, 117
 Fresnel wave normal equation, 118
 Helmholtz equation, 112, 117, 131
 indicatrix biaxial medium, 120, 133
 Maxwell's equations in anisotropic media, 107
 optical indicatrix and electric field eigenvector construction, 137
 permeability tensor, 108
 permittivity tensor, 108
 diagonalisation, 109
 eigenvalues, eigenvectors, 109
 symmetry property, 108
 phase propagation speed biaxial medium, 120
 phase propagation speed, phase propagation index, 118
 plane wave propagation in anisotropic media, 110
 plane wave propagation in uniaxial and biaxial media, 112
 Poynting vector and wave vector, 124
 Poynting vectors, 113
 principal section, 114, 124
 ratio of ray and phase velocity, 125
 ray normal surface, 134
 ray normal surface and electric flux density eigenvector construction, 137
 ray optical indicatrix, 134
 reflection and transmission at an interface
 amplitude coefficients, 157
 calculation of Poynting vectors, 155
 definition of medium admittance, 156
 generalised Snell's law, 155
 graphical construction, 154
 intensity coefficients, 159
 relationship between ray and wave vector, 131
 specific conductivity tensor, 108
 state of polarisation, 107
 wave normal surface biaxial medium, 120, 133
 wave propagation direction and polarisation eigenstates
 biaxial medium, 122, 123
 wave propagation in anisotropic media, 107
 wave propagation speed, 107
 wave, ray and field vectors (biaxial medium), 114
 wave, ray and field vectors (uniaxial medium), 113
- anisotropy, 107
 Bartholin, discovery of birefringence, 107
