	<i>Preface</i>	<i>page ix</i>
1	Some Trends in Optoelectronics	1
2	Materials for Optoelectronic Applications	9
	2.1 Introduction	9
	2.2 Semiconductors	9
	2.3 Crystal Lattices: Bonding in Crystals	12
	2.4 Electron Energy Bands	18
	2.5 Semiconductor Heterostructures	28
	2.6 Lattice-Matched and Lattice-Mismatched Materials	31
	2.7 Lattice-Matched and Pseudomorphic Heterostructures, Si/Ge Heterostructures, and Lattice-Matched III–V Heterostructures	37
	2.8 Wide-Bandgap Materials and Heterostructures	40
	2.9 Quantum Dots	45
	2.10 Two-Dimensional Monolayer Crystals (Graphene, Silicene, Germanene, Tinene, Black Phosphorus, Monochalcogenides, Dichalcogenides, Trichalcogenides, and Boron Nitrides)	50
	2.11 Closing Remarks to Chapter 2	56
	2.12 Control Questions	58
3	Electrons in Quantum Structures	60
	3.1 Introduction	60
	3.2 Quantum Wells	61
	3.3 Electrons in Single- and Few-Monolayer Crystals	69
	3.4 Quantum Wires	80
	3.5 Quantum Dots	84
	3.6 Coupling between Quantum Wells	90
	3.7 Superlattices	98
	3.8 Excitons in Quantum Structures	104
	3.9 Nanostructure-Based Materials Are Reconfigurable Nanomaterials	114
	3.10 Closing Remarks to Chapter 3	122
	3.11 Control Questions	124

4	Light–Semiconductor Materials Interaction	125
4.1	Introduction	125
4.2	Electromagnetic Waves and Photons	125
4.3	Light Interaction with Matter: Phototransitions	136
4.4	Optical Properties of Bulk Semiconductors	142
4.5	Closing Remarks to Chapter 4	166
4.6	Control Questions	166
5	Optics of Quantum Structures	168
5.1	Introduction	168
5.2	Optical Properties of Quantum Structures	168
5.3	Intraband Transitions in Quantum Structures	182
5.4	Optical Properties of Two-Dimensional (Few-Monolayer) Crystals	193
5.5	The Optics of Quantum Dots	205
5.6	Closing Remarks to Chapter 5	208
5.7	Control Questions	209
6	Electro-Optics and Nonlinear Optics	211
6.1	Introduction	211
6.2	Electro-Optics in Semiconductors	212
6.3	Terahertz Coherent Oscillations of Electrons in an Electric Field	225
6.4	Nonlinear Optics in Heterostructures	228
6.5	Plasmonics and its Peculiarities in Nanostructures	238
6.6	Closing Remarks to Chapter 6	257
6.7	Control Questions	258
7	Light-Emitting Devices Based on Interband Phototransitions in Quantum Structures	260
7.1	Introduction	260
7.2	Light Amplification in Semiconductors	260
7.3	Light-Emitting Diodes and Lasers	279
7.4	Blue and Ultraviolet Light-Emitting Diodes	297
7.5	Quantum Wire and Quantum Dot Emitters and Lasers	317
7.6	Closing Remarks to Chapter 7	329
7.7	Control Questions	330
8	Devices Based on Intraband Phototransitions in Quantum Structures and Silicon Optoelectronics	331
8.1	Introduction	331
8.2	Unipolar Intersubband Quantum-Cascade Lasers	332
8.3	Terahertz Cascade Lasers	336
8.4	Photodetectors Based on Intraband Phototransitions	340
8.5	Silicon Photonics	349

	Contents	vii
8.6	Perspectives of Optoelectronic Devices Based on Two-Dimensional Crystals	353
8.7	Adaptive Photodetectors	360
8.8	Closing Remarks to Chapter 8	370
8.9	Control Questions	370
 Appendix A Basic Statements and Formulae of Quantum Physics		 373
Appendix B Tables of Units		386
Appendix C List of Pertinent Symbols		389
	<i>Further Reading</i>	391
	<i>Index</i>	401
