<i>Foreword</i>	xix
<i>Introduction</i>	xxiii
1 The Zoo of Binary Stars	
HENRI M. J. BOFFIN	1
1.1 Binaries Are Ubiquitous	1
1.2 The Fraction of Binaries	2
1.3 Interacting Binaries	4
1.3.1 Wind Accretion	5
1.3.2 Roche-Lobe Overflow	6
1.3.3 Common Envelope Evolution	7
1.4 Massive Star Interactions and Exploding Events	7
2 Statistics of Binary and Multiple Stars	
MAXWELL MOE	12
2.1 Observational Techniques	12
2.2 Statistics	14
2.2.1 Binary Fraction and Multiplicity Frequency	14
2.2.2 Period Distribution	15
2.2.3 Mass-Ratio Distribution	18
2.2.4 Eccentricity Distribution	21
2.2.5 Variations with Age, Environment and Metallicity	21
2.3 Implications for Binary Star Formation and Evolution	23
3 Gaia and LSST: Their Importance in Binary Star Research	
LAURENT EYER, NAMI MOWLAVI, ISABELLE LECOEUR-TAIBI, LORENZO RIMOLDINI, BERRY HOLL, MARC AUDARD, SIMON HODGKIN, DAFYDD W. EVANS, LUKASZ WYRZYKOWSKI, GEORGE SEABROKE, ANDREJ PRŠA, AND DIMITRI POURBAIX	32
3.1 Introduction: The Data Revolution in Astronomy	32
3.2 Gaia and LSST	33
3.2.1 The Gaia Mission	33
	vii

viii	<i>Contents</i>	
	3.2.2 The Large Synoptic Survey Telescope (LSST)	35
	3.2.3 LSST Data Stream	35
3.3	The Detection of Nonsingle Stars	35
	3.3.1 Astrometric Detection of Binaries	36
	3.3.2 Spectroscopic Detection of Binaries	37
	3.3.3 Photometric Detection of Binaries	37
3.4	The Classification of Binaries	39
3.5	The Characterisation of Binaries	41
3.6	Conclusions	41
4	Population Synthesis of Binary Stars	
	ROBERT G. IZZARD AND GHINA M. HALABI	45
4.1	Introduction	45
4.2	Big Data and Big Challenges	46
	4.2.1 The Single- and Binary-Star Parameter Spaces	47
	4.2.2 Detailed and Synthetic Stellar Models	48
4.3	Stellar Accountancy	49
4.4	Slow and Fast Parameters	52
	4.4.1 Fast Parameters	52
	4.4.2 Slow Parameters	53
4.5	Matching Models to Observations, and Models to Models	55
4.6	Headline News in Population Synthesis	56
4.7	<i>Not Any Colour You Like ...</i>	57
5	Low- and Intermediate-Mass Star Evolution: Open Problems	
	MAURIZIO SALARIS	62
5.1	Introduction	62
5.2	Convection	62
	5.2.1 Convective Boundary Mixing	63
	5.2.2 Core He-Burning Mixing	64
5.3	Element Transport in Radiative Layers	66
	5.3.1 Thermohaline Mixing	66
	5.3.2 Atomic Diffusion	67
	5.3.3 Rotational Mixing	71
5.4	Outlook	73
6	The Symbiotic Stars	
	ULISSE MUNARI	77
6.1	Symbiotic Stars: Binaries Accreting from a Red Giant	77
6.2	Burning Symbiotic Stars	79
6.3	Accreting-Only Symbiotic Stars	81
6.4	Different Types of Outburst in Symbiotic Stars	83
	6.4.1 Z-And or Classical Type	83

<i>Contents</i>		ix
6.4.2	Symbiotic Novae	85
6.4.3	Novae Erupting within Symbiotic Stars	88
7	Binary Post-AGB Stars as Tracers of Stellar Evolution	
	HANS VAN WINCKEL	92
7.1	Introduction	92
7.2	Spectral Energy Distribution	93
7.3	Orbital Properties	95
7.4	Discs: Resolved from the Inner Edge to the Outer Radius	96
	7.4.1 Near- and Mid-IR Interferometry	96
	7.4.2 CO Interferometry	97
	7.4.3 Longevity	98
7.5	Outflows and Jets	98
7.6	Feedback from Circumbinary Discs	99
7.7	Conclusions	101
8	The Importance of Binarity in the Formation and Evolution of Planetary Nebulae	
	DAVID JONES	106
8.1	Introduction	106
8.2	Close-Binary Systems	106
	8.2.1 Binary Fraction	107
	8.2.2 The Link between Morphology and Central Star Binarity	109
	8.2.3 The Link to Type Ia Supernovae	112
	8.2.4 Pre-Common-Envelope Mass Transfer	113
8.3	Non-Post-Common-Envelope Systems	114
	8.3.1 Barium Stars	115
	8.3.2 Long-Period Radial Velocity Variables	115
	8.3.3 Resolved Companions	117
8.4	Chemistry	118
	8.4.1 Dual-Dust Chemistry	118
	8.4.2 The Abundance Discrepancy Problem	119
8.5	Summary	120
9	Massive Star Evolution: Binaries as Two Single Stars	
	CYRIL GEORGY AND SYLVIA EKSTRÖM	128
9.1	The Basics	128
9.2	Mass Loss	129
9.3	Internal Mixing Processes	130
	9.3.1 Convection	131
	9.3.2 Rotation	132
9.4	Conclusion	137

10	Binarity at High Masses	
	HUGUES SANA	144
10.1	Massive Stars in the Grand Scheme of Things	144
	10.1.1 The Issue of Multiplicity	144
	10.1.2 The Parameter Space	145
10.2	The Spectroscopic Regime	145
10.3	The High-Angular Resolution Regime	148
10.4	Future Work	149
11	Luminous Blue Variables: Their Formation and Instability in the Context of Binary Interactions	
	ANDREA MEHNER	153
11.1	Introduction	153
	11.1.1 Luminous Blue Variables	153
	11.1.2 Evolutionary Stage of the Luminous Blue Variables	155
	11.1.3 The Cause of the Luminous Blue Variable Instability	155
11.2	Luminous Blue Variable Outbursts and Binary Interaction	156
	11.2.1 LBV Binarity	156
	11.2.2 η Car	157
	11.2.3 HR Car	158
11.3	Binary Scenarios for the Formation of LBVs	160
	11.3.1 Rejuvenated Mass Gainer and Kick Scenario	160
	11.3.2 Merger Scenario	161
11.4	Conclusion	161
12	Type Ia Supernovae: Where Are They Coming From and Where Will They Lead Us?	
	FERDINANDO PATAT AND NA'AMA HALLAKOUN	167
12.1	Source of Embarrassment vs. Excitement	167
	12.1.1 Why and How?	167
	12.1.2 The Basics	168
12.2	The SNe Ia Progenitor Problem: An Observational Approach	169
	12.2.1 Candidate Populations	169
	12.2.2 Pre-explosion Sites	170
	12.2.3 An Interlude on WD Spin-Up/Down	170
	12.2.4 Explosion Properties	171
	12.2.5 Surviving Companions	172
	12.2.6 SN Remnants	173
	12.2.7 SN Rates and Binary Population Synthesis	173
12.3	Are There Enough Double White Dwarf Mergers to Explain the Milky Way's SN Ia Rate?	173
12.4	Single Degenerates: Is This It?	176

Contents

13 Binary Interactions and Gamma-Ray Bursts	
NIAL R. TANVIR	181
13.1 Introduction	181
13.2 Long-Duration Gamma-Ray Bursts from Binary Stars	182
13.2.1 GRBs as Probes of Reionisation	183
13.3 Short-Duration Gamma-Ray Bursts from Binary Stars	185
13.3.1 GW 170817	186
13.4 Conclusions	186
14 Binaries as Sources of Gravitational Waves	
GIJS NELEMANS	191
14.1 Gravitational Waves and Their Detection	191
14.1.1 Detectors: Status and Future	191
14.1.2 Order of Magnitude Estimates: Detection Horizons	193
14.2 What Can We Learn about Stars and Binaries from GW Measurements?	194
14.2.1 Open Questions about Compact Objects	195
14.2.2 Black Holes	195
14.2.3 Neutron Stars and Electromagnetic Follow-Up	198
14.2.4 White Dwarfs and Electromagnetic Data	201
14.3 Conclusions	202
15 The Impact of Binaries on the Stellar Initial Mass Function	
PAVEL KROUPA AND TEREZA JERABKOVA	208
15.1 Introduction	208
15.2 The Nature of the IMF of Stars and in Galaxies	210
15.3 The Stellar Mass–Luminosity Relation	211
15.4 Binary Stars	212
15.5 The IMF Is a Systematically Varying Function	216
16 The Formation of Binary Stars: Insights from Theory and Observation	
CATHIE J. CLARKE	225
16.1 Introduction	225
16.2 Overview of Binary Formation Mechanisms	226
16.3 The Era of Binary Mass Production in Hydrodynamical Simulations	230
16.4 The Advent of ‘Realistic’ Binary Formation Simulations	232
16.4.1 The Inclusion of Thermal Feedback	232
16.4.2 The Inclusion of Magnetic Fields	233
16.5 Clustering at Birth: Hints from Higher-Order Multiple Statistics	235
16.6 An Observational Frontier: Direct Observations of Binary Star Formation from ALMA and the VLA	237

xii	<i>Contents</i>	
17	The Maxwell's Demon of Star Clusters	
	MICHELA MAPELLI	244
17.1	Binaries as Sources of Energy	244
17.2	Impact of Binaries on Core Collapse	246
17.3	Impact of Binaries on Equipartition	248
17.4	Stellar Exotica	251
	17.4.1 Blue Straggler Stars	251
	17.4.2 Massive Black Hole Binaries	252
	17.4.3 Intermediate-Mass Black Holes	254
17.5	Summary	256
18	Alternative Stellar Evolution Pathways	
	ROBERT D. MATHIEU AND EMILY M. LEINER	261
18.1	Introduction	261
18.2	Alternative Stellar Evolution Pathways: The Blue Stragglers of NGC 188 and NGC 6819	263
18.3	Alternative Stellar Evolution Pathways: Across the CMD: Yellow Giants and Sub-Subgiants	267
	18.3.1 Yellow Giants	267
	18.3.2 Sub-Subgiants	268
18.4	Alternative Stellar Evolution Pathways: Within the Main Sequence	270
18.5	Alternative Stellar Evolution Pathways: Angular Momentum Evolution	271
18.6	Closing Thoughts	273
18.7	Acknowledgements	273
19	Clocks and Scales: Playing with the Physics of Blue Stragglers	
	FRANCESCO R. FERRARO AND BARBARA LANZONI	277
19.1	The BSS–Binaries Connection	277
	19.1.1 Another Puzzling Feature: The Double BSS Sequence	280
19.2	Clocks: Defining and Refining the Dynamical Clock for Star Clusters	282
19.3	Scales: Searching for Evolved BSSs	287
	19.3.1 The Stellar Scale	288
	19.3.2 The Discovery of the E-BSS1 in 47 Tucanae	288
19.4	What Next?	291
20	Binaries at Very Low Metallicity	
	SARA LUCATELLO	298
20.1	Background	298
	20.1.1 Binaries as Probes of Star Formation	298
	20.1.2 Binaries and CEMP Stars	299
20.2	Literature Studies of Binarity at Low Metallicity	301
20.3	EMP Binarity	302
20.4	Future Perspectives	304

<i>Contents</i>		xiii
21 Population and Spectral Synthesis: It Doesn't Work without Binaries		
J. J. ELDRIDGE AND ELIZABETH R. STANWAY		307
21.1 What Is Population and Spectral Synthesis?		307
21.2 How Do You Do It?		308
21.3 Why Are Binaries Important?		311
21.3.1 Blue Stragglers on the HR Diagram		312
21.3.2 Number Counts		313
21.3.3 SN Progenitors		314
21.3.4 GW Mergers		316
21.4 Galaxies Near and Far		316
21.5 Ionising Radiation Fields and H II Regions		318
21.6 Photon Production, Photon Escape and Reionisation		319
21.7 Looking Forward		321
21.8 Summary		322
<i>Index</i>		329
