Part I Review of General Relativity	
1 Introduction	3
2 The Mathematical Foundations	11
2.1 Basic Mathematical Objects of Physics: Vectors and Tensors	11
2.2 Essentials of Riemannian Geometry	16
2.3 The Riemann Curvature Tensor and Its Properties	32
2.4 Summary	36
3 The Gravitational Field Equations	37
3.1 The Variational Principle and the Field Equations	37
3.2 The Spherically Symmetric Gravitational Field	50
3.3 Summary and Conclusions	53
4 The Solar System Tests and Astrophysical Applications	55
4.1 Classical Tests of General Relativity	55
4.2 The Tolman–Oppenheimer–Volkoff Equation	62
4.3 Spherical Gravitational Collapse of Strange Quark Null Fluids	76
4.4 Steady Spherical Accretion in Arbitrary Spherically-Symmetric Space-times	81
4.5 Electromagnetic Emission Properties of Thin Accretion Disks	87
4.6 Summary and Discussion	99
5 Cosmology	101
5.1 Newtonian Cosmology	101
5.2 Relativistic Cosmology	116
5.3 Open Questions and Going Beyond General Relativity	136
6 $f(R)$ Gravity	138
6.1 Introduction	138
6.2 The Gravitational Field Equations	140
6.3 Late-Time Cosmic Acceleration in $f(R)$ Gravity	149
6.4 Vacuum Solutions of the Gravitational Field Equations	151

viii	<i>Contents</i>	
6.5	Dark Matter in $f(R)$ Gravity	157
6.6	Final Considerations	176
Part II Generalized Curvature-Matter Couplings in Modified Gravity		
7	Introduction	179
8	Gravity Theories with Linear Curvature-Matter Coupling	186
8.1	Linear Nonminimal Curvature-Matter Coupling	186
8.2	The Matter Lagrangian and the Energy-Momentum Tensor	188
8.3	Curvature-Matter Coupling in the Palatini Formalism	194
8.4	Equivalence with an Anomalous Scalar-Tensor Theory	200
8.5	Further Theoretical Developments	201
9	$f(R, L_m)$ Gravity	204
9.1	Action and Field Equations	204
9.2	Solar System Tests	206
9.3	The Geodesic Deviation Equation and the Raychaudhuri Equation	208
9.4	Tidal Forces and the Roche Limit	210
9.5	Extensions with Scalar Field and Kinetic Term Dependencies	213
9.6	Summary and Discussion	218
10	$f(R, T)$ Gravity	219
10.1	Action and Gravitational Field Equations	219
10.2	Specific Cosmological Solution	221
10.3	$f(R, T, R_{\mu\nu}T^{\mu\nu})$ Gravity	223
10.4	Further Applications	229
11	Dark Matter as a Curvature-Matter Coupling Effect	231
11.1	Introduction	231
11.2	Stable Circular Orbits and Frequency Shifts in Modified Gravity	232
11.3	Curvature-Matter Coupling Effects on Light Shifts	234
11.4	Galactic Rotation Curves	235
11.5	Constraining the Curvature-Matter Coupling with Galactic Stellar Distributions	238
11.6	Stability of the Stable Circular Orbits	239
11.7	Conclusion	240
12	Thermodynamical Interpretation of Curvature-Matter Coupling	241
12.1	Introduction	241
12.2	Thermodynamical Description of Matter Creation in General Relativity	242
12.3	Thermodynamic Interpretation of $f(R, L_m)$ Gravity	249

Contents

ix

12.4 Irreversible Thermodynamic Interpretation of $f(R, T)$ Gravity	255
12.5 Discussion	262
13 Quantum Cosmology of $f(R, T)$ Gravity	265
13.1 Introduction	265
13.2 The Wheeler–DeWitt Equation in $f(R, T)$ Gravity	268
13.3 Specific Model: $f(R, T) = F^0(R) + \theta RT$	274
13.4 A Perturbative Approach to the Cosmological SWDW Equation	281
13.5 The Second Quantization of Time	290
13.6 Conclusions	294
14 Modified Gravity from Quantum Metric Fluctuations	296
14.1 Introduction	296
14.2 Quantum Metric Fluctuations and Gravitational Action	298
14.3 Modified Gravity from Quantum Perturbations Proportional to the Metric	303
14.4 Quantum Metric Fluctuations Proportional to the Energy-Momentum Tensor	321
14.5 Conclusion	331
15 Discussion and Conclusion	333
Part III Hybrid Metric-Palatini Gravity	
16 Introduction	339
17 The General Formalism	342
17.1 Action and Gravitational Field Equations	342
17.2 Scalar–Tensor Representation	344
17.3 The Weak Field Limit	347
17.4 The Cauchy Problem	350
17.5 General Hybrid Metric-Palatini Theories	352
18 Cosmological Applications	359
18.1 Background Expansion	359
18.2 Cosmological Perturbations	363
19 Astrophysical Applications	368
19.1 Galactic Phenomenology: Stable Circular Orbits of Test Particles	369
19.2 Galactic Clusters: The Generalized Virial Theorem	375
19.3 Final Remarks	382
20 Compact Stellar Objects	383
20.1 Introduction	383

x	<i>Contents</i>	
20.2	The Hydrostatic Equilibrium Equations for Spherically Symmetric Stars	385
20.3	Structure of High-Density Compact Objects	390
20.4	Stellar Models with Fixed Functional Forms of the Scalar Field	401
20.5	Conclusions	405
21	Hybrid Gravity Traversable Wormholes	410
21.1	Field Equations and Energy Conditions	410
21.2	Wormholes in Generalized Modified Gravity	412
21.3	Wormholes in Hybrid Metric-Palatini Gravity	414
21.4	Specific Examples	415
21.5	Concluding Remarks	417
22	Conclusions	419
	<i>References</i>	422
	<i>Index</i>	446
