

## Orthogonal Polynomials and Painlevé Equations

There are a number of intriguing connections between Painlevé equations and orthogonal polynomials, and this book is one of the first to provide an introduction to these. Researchers in integrable systems and nonlinear equations will find the many explicit examples where Painlevé equations appear in mathematical analysis very useful. Those interested in the asymptotic behavior of orthogonal polynomials will also find the description of Painlevé transcendents and their use for local analysis near certain critical points helpful to their work. Rational solutions and special function solutions of Painlevé equations are worked out in detail, with a survey of recent results and an outline of their close relationship with orthogonal polynomials. Exercises throughout the book help the reader to get to grips with the material.

The author is a leading authority on orthogonal polynomials, giving this work a unique perspective on Painlevé equations.

## AUSTRALIAN MATHEMATICAL SOCIETY LECTURE SERIES

Editor-in-chief: Professor J. Ramagge, School of Mathematics and Statistics,  
 University of Sydney, NSW 2006, Australia

## Editors:

Professor G. Froyland, School of Mathematics and Statistics,  
 University of New South Wales, NSW 2052, Australia

Professor M. Murray, School of Mathematical Sciences, University of Adelaide, SA 5005, Australia

Professor C. Praeger, School of Mathematics and Statistics, University of Western Australia,  
 Crawley, WA 6009, Australia

- 1 Introduction to Linear and Convex Programming, N. CAMERON
- 2 Manifolds and Mechanics, A. JONES, A. GRAY & R. HUTTON
- 3 Introduction to the Analysis of Metric Spaces, J. R. GILES
- 4 An Introduction to Mathematical Physiology and Biology, J. MAZUMDAR
- 5 2-Knots and their Groups, J. HILLMAN
- 6 The Mathematics of Projectiles in Sport, N. DE MESTRE
- 7 The Petersen Graph, D. A. HOLTON & J. SHEEHAN
- 8 Low Rank Representations and Graphs for Sporadic Groups, C. E. PRAEGER & L. H. SOICHER
- 9 Algebraic Groups and Lie Groups, G. I. LEHRER (ed.)
- 10 Modelling with Differential and Difference Equations, G. FULFORD, P. FORRESTER & A. JONES
- 11 Geometric Analysis and Lie Theory in Mathematics and Physics, A. L. CAREY & M. K. MURRAY (eds.)
- 12 Foundations of Convex Geometry, W. A. COPPEL
- 13 Introduction to the Analysis of Normed Linear Spaces, J. R. GILES
- 14 Integral: An Easy Approach after Kurzweil and Henstock, L. P. YEE & R. VYBORNY
- 15 Geometric Approaches to Differential Equations, P. J. VASSILIOU & I. G. LISLE (eds.)
- 16 Industrial Mathematics, G. R. FULFORD & P. BROADBRIDGE
- 17 A Course in Modern Analysis and its Applications, G. COHEN
- 18 Chaos: A Mathematical Introduction, J. BANKS, V. DRAGAN & A. JONES
- 19 Quantum Groups, R. STREET
- 20 Unitary Reflection Groups, G. I. LEHRER & D. E. TAYLOR
- 21 Lectures on Real Analysis, F. LÁRUSSON
- 22 Representations of Lie Algebras, A. HENDERSON
- 23 Neverending Fractions, J. BORWEIN et al.
- 24 Wavelets: A Student Guide, P. NICKOLAS
- 25 Classical Groups, Derangements and Primes, T. BURNES & M. GIUDICI
- 26 Notes on Counting: An Introduction to Enumerative Combinatorics, P. J. CAMERON

## Contents

	<i>Preface</i>	<i>page xi</i>
<b>1</b>	<b>Introduction</b>	1
	1.1 Orthogonal polynomials on the real line	1
	1.1.1 Pearson equation and semi-classical orthogonal polynomials	4
	1.2 Painlevé equations	8
	1.2.1 The six Painlevé differential equations	8
	1.2.2 Discrete Painlevé equations	9
<b>2</b>	<b>Freud weights and discrete Painlevé I</b>	13
	2.1 The Freud weight $w(x) = e^{-x^4+tx^2}$	13
	2.2 Asymptotic behavior of the recurrence coefficients	16
	2.3 Unicity of the positive solution of d-P <sub>I</sub> with $x_0 = 0$	17
	2.4 The Langmuir lattice	21
	2.5 Painlevé IV	23
	2.6 Orthogonal polynomials on a cross	24
<b>3</b>	<b>Discrete Painlevé II</b>	27
	3.1 Orthogonal polynomials on the unit circle	27
	3.1.1 The weight $w(\theta) = e^{t \cos \theta}$	28
	3.1.2 The Ablowitz–Ladik lattice	31
	3.1.3 Painlevé V and III	32
	3.2 Discrete orthogonal polynomials	34
	3.2.1 Generalized Charlier polynomials	36
	3.2.2 The Toda lattice	43
	3.2.3 Painlevé V and III	44
	3.3 Unicity of solutions for d-P <sub>II</sub>	46
<b>4</b>	<b>Ladder operators</b>	50
	4.1 Orthogonal polynomials with exponential weights	50

4.2	Riemann–Hilbert problem for orthogonal polynomials	53
4.3	Proof of the ladder operators	55
4.4	A modification of the Laguerre polynomials	57
4.5	Ladder operators for orthogonal polynomials on the linear lattice	60
4.6	Ladder operators for orthogonal polynomials on a $q$ -lattice	61
<b>5</b>	<b>Other semi-classical orthogonal polynomials</b>	<b>64</b>
5.1	Semi-classical extensions of Laguerre polynomials	64
5.2	Semi-classical extensions of Jacobi polynomials	65
5.3	Semi-classical extensions of Meixner polynomials	66
5.4	Semi-classical extensions of Stieltjes–Wigert and $q$ -Laguerre polynomials	70
5.5	Semi-classical bi-orthogonal polynomials on the unit circle	74
5.6	Semi-classical extensions of Askey–Wilson polynomials	79
<b>6</b>	<b>Special solutions of Painlevé equations</b>	<b>83</b>
6.1	Rational solutions	83
6.1.1	Painlevé II	83
6.1.2	Painlevé III	88
6.1.3	Painlevé IV	91
6.1.4	Painlevé V	98
6.1.5	Painlevé VI	102
6.2	Special function solutions	103
6.2.1	Painlevé II	103
6.2.2	Painlevé III	106
6.2.3	Painlevé IV	108
6.2.4	Painlevé V	109
6.2.5	Painlevé VI	112
<b>7</b>	<b>Asymptotic behavior of orthogonal polynomials near critical points</b>	<b>115</b>
7.1	Painlevé I	119
7.2	Painlevé II	129
7.3	Painlevé III	136
7.4	Painlevé IV	137
7.5	Painlevé V	141
7.6	Painlevé VI	146

## Preface

These notes are intended to explain the relationship between orthogonal polynomials and Painlevé equations. They are not intended to give a systematic theory of Painlevé equations, their transformations and classification. This can be found elsewhere; we recommend in particular the classical book by Ince [88, §14.4], the more recent books [46, 68, 82, 125] and the review papers [80] and [96] on discrete and continuous Painlevé equations. Researchers in orthogonal polynomials will find the notes useful to see how semi-classical orthogonal polynomials often lead to discrete and continuous Painlevé equations. Usually only special solutions of these Painlevé equations in terms of classical special functions will be relevant. Furthermore, some integrable systems, such as the Toda lattice and related differential-difference systems, also appear in a very natural way in the theory of orthogonal polynomials. Those interested in the asymptotic behavior of orthogonal polynomials may appreciate seeing that Painlevé transcendents are used for the local analysis near critical points. Researchers in integrable systems, and in particular in Painlevé equations, may find it useful to see that a lot of explicit systems of orthogonal polynomials are described using discrete and continuous Painlevé equations. These applications in orthogonal polynomial theory often give a new viewpoint of Painlevé equations, in particular on the behavior of the special solutions of these equations.

### Acknowledgments

I started writing these notes for a master course that I taught at the Universidad Carlos III de Madrid in May 2012. That course essentially consisted of Chapters 1–3. I continued these notes during my sabbatical trip to the University of Sydney in August 2016, where I started Chapters 4 and 6–7. I finally finished the notes at the African Institute for Mathematics in Cameroon in March–April

2017. I would like to thank the people in Leganés (Madrid), Sydney and AIMS Cameroon for their hospitality and for the discussions which I had on the topics of these notes. I am also grateful to the referee for pointing out many papers that are relevant for these lecture notes.
