

BLOCKCHAIN REGULATION AND GOVERNANCE IN EUROPE

In *Blockchain Regulation and Governance in Europe*, Michèle Finck examines the relationship between blockchain technology and EU law and introduces the theme of blockchain governance. The book provides a general introduction to blockchains as both a regulatable and a regulatory technology and outlines the interaction between distributed ledger technology and specific areas of EU law, such as the General Data Protection Regulation. It should be read by anyone interested in EU law, the relationship between law, innovation and technology, and technology governance.

MICHÈLE FINCK is a Senior Research Fellow at the Max Planck Institute for Innovation and Competition in Munich as well as a lecturer in EU law at Keble College, University of Oxford. She holds law degrees from King's College London, the Sorbonne and the European University Institute as well as a doctorate in law from the University of Oxford. Prior to joining the Max Planck Institute Michèle worked as a fellow at the London School of Economics and Political Science. She is the author of *Subnational Authorities in EU Law* (2017) and an editor of the *Cambridge Handbook on the Law of the Sharing Economy* (2018).

1	Blockchain Technology	1
	I Structure of the Book	4
	II Blockchains and Other Forms of Distributed Ledger Technology	6
	A Definition	6
	B History and Evolution	8
	C Blockchains as an Accounting System	10
	D Blockchains as Application Infrastructure	11
	E Algorithmic Trust	12
	F A Large Variety of Blockchains	14
	G Cryptoassets	16
	H Decentralization and Disintermediation	18
	I Consensus Protocols	19
	J Decentralized Applications and D(A)Os	22
	K Smart Contracts	24
	L Cryptography and Cryptoeconomics	28
	M Blockchains as Tamper-Proof Systems	30
	N Technical Immaturity	31
	O Malleability	33
2	Blockchains as a Regulatable Technology	34
	I Blockchains as the New Sealand?	36
	II Regulating Code	39
	A Code as Law	39
	B Law Constraining Code	40
	C Code as Law Avoidance	41

D Code Can Help Law	43
E Code Needs Law	44
III The Regulatory Access Points of the Blockchain Space	45
A Internet Service Providers	47
B Miners	49
C Core Software Developers	52
D End Users	53
E Old and New Intermediaries	55
F Governments as Blockchain Participants	57
IV The Difficulties of Blockchain Regulation	58
A Blockchains as Transnational Constructs	58
B Decentralization	60
C Anonymity	63
D Increased Adoption	64
3 Blockchains as a Regulatory Technology	66
I Code as Law	68
A Code as a Form of Private Ordering	68
B Code as Public Ordering	70
II Blockchain Code as Law	72
A The Emergence of a New Form of Law	73
1 Automated Enforcement	75
B Customized Legal Orders	78
III From Legal Code to Technical Code	80
IV The Necessary Interoperability of On-Chain and Off-Chain Law	84
4 Blockchains and the General Data Protection Regulation	88
I Personal Data on Blockchains	90
II The European Union's General Data Protection Regulation	91
A The GDPR's Material Scope: Does Data Stored on a Blockchain Qualify as Personal Data?	92
1 Personal Data Stored on a DLT	93
2 Public Keys	96
III Applying the GDPR to Blockchains	99
A The Data Controller(s)	99
B The GDPR's Territorial Scope	102
C Enforcing Substantive Data Protection Rights on Blockchains	103
1 Data Minimization	104
2 The Right to Amendment	104
3 The Right to Access	105

Contents

4	The Right to Be Forgotten	106
5	Data Protection by Design and Data Protection by Default	108
IV	Blockchains as an Innovation in Data Protection?	110
	A Reconciling Fundamental Rights Protection and the Promotion of Innovation	110
	B Blockchains as a Mechanism of Data Sovereignty	113
V	The GDPR and the Future of Blockchain Technology	115
5	Blockchains and the Idle Data Economy	117
	I Idle Data	119
	II The Legal Treatment of Non-Personal Data under EU Law	121
	A The Database Directive	121
	B The Essential Facilities Doctrine	124
	C Sector-Specific Solutions	125
	D The General Data Protection Regulation as a General Data Law?	127
	1 Data Portability	127
	2 The GDPR as the European Union's General Data Law?	129
	E Property Rights in Data	131
	III Access over Ownership	133
	IV Blockchains as a Technical Solution to the Data Access Problem?	134
	V Blockchains as a Tool of Data Governance	140
6	Blockchains, Law and Technological Innovation	142
	I Regulation, Innovation and Technology	145
	A Public Authorities as Participants in the Innovation Process	146
	1 Research Finance and Investments	147
	2 Early Adoption	148
	3 The Provision of Information	149
	B Regulation as a Motor of Innovation	150
	1 Promoting Legal Certainty	150
	2 Creating a Market for a New Technology	151
	3 Ensuring the Interoperability between New Technologies and Existing Law	152
	4 Generating User Trust	152
	II Examples of Blockchain Regulation to Date	153
	A Wait and See	154
	B The Application of Existing Legal Frameworks	155
	C Issuing Guidance	157
	D Regulatory Sandboxes	158
	E Regulatory Cooperation	160
	F New Legislation	161

III Polycentric Co-Regulation	165
A Command-and-Control Legislation	165
B Self-Regulation	167
C Polycentric Co-Regulation	171
1 Co-Regulation	172
2 Polycentricity	176
3 Coupling Co-Regulation with Technology	178
4 The 28th Regime	180
7 Blockchain Governance	182
I The Principles of Blockchain Governance	183
II The Necessity of Governance Processes	186
A The ‘The DAO’ Hack	187
B The Bitcoin Block Size Debate	189
III The Mechanisms of Blockchain Governance	191
A Process versus Design	191
B On-Chain versus Off-Chain Governance	192
IV The Layers of Blockchain Governance	195
A The Network Layer	195
1 Permissioned Blockchains	195
2 Unpermissioned Blockchains	197
B Governance of the Application Layer	197
C Blockchain Intermediaries	198
V The Governance Processes of Permissionless Blockchains	198
A Core Software Developers	199
B Miners	201
C Coin Holders	203
D Other Governance Participants	204
VI What Decentralization?	205
VII Law as an Exogenous Factor of Blockchain Governance	206
VIII The Importance of Governance for Blockchains’ Future	208
8 Conclusion	210
<i>Index</i>	213

Acknowledgements

It is often said that writing a book is a solitary enterprise. This is in many ways true as you need to spend considerable time reading, thinking and writing alone. Yet, in at least as many ways even writing a monograph is a collaborative enterprise where you build on what you have learned from others.

I am grateful to the institutions that have allowed me to discuss some of the ideas in this book with them. These include the Oxford Internet Institute, the London School of Economics, Seoul National University, the European Blockchain Observatory and Forum and the European Commission, the University of Freiburg, the University of Oxford, the University of Ferrara and the European Law Institute, Wharton Business School, Cardozo Law School, the Sorbonne, University College London, various institutions of various EU Member States as well as others. I should also single out a few individuals that have read parts of this book or provided valuable inspiration in conversations: the entire MPI data group, Oliver Beige, Tatiana Cutts, Primavera De Filippi and the COALA crew, Jörn Erbguth, Robert Riemann, Edmund Schuster, Daniel Resas, Christian Sillaber, Kevin Werbach and the entire Reg@Tech Group at Wharton, Aaron Wright, Karen Yeung and Vlad Zamfir. The vibrant Twittersverse also deserves an honorable mention as well as Liz Fisher, Giorgio Monti and Steve Weatherill who taught me about scholarly research in the first place.

I must also thank the Max Planck Institute for Innovation and Competition and in particular Reto Hilty for having provided me with an extraordinary working environment. This book was written between the fall of 2017 and the spring of 2018, something that I could not have done without the outstanding research environment I was able to enjoy. I moreover owe particular thanks to the London School of Economics and my former colleagues at the LSE Law Department. It was my fellowship at the LSE (from 2015-2017) that enabled me to discover new academic terrains, including blockchain. Finally, I would also like to thank Felix Hoerl and Domagoj Pavic for superb research assistance.

Most importantly I owe thanks – for everything – to my family, in particular to my parents Martine and Jean-Claude and my husband Moritz.
