<i>Preface to the Revised Edition</i>	page xi
<i>Preface to the First Edition</i>	xiii
1 Introduction	1
1.1 Science	1
1.2 Metaphysics	4
1.3 Causality	6
1.4 Ontology	8
1.5 History and the History of Science	12
1.6 An Outline of the Main Story	13
2 The Rise of Classical Field Theory	21
2.1 Physical Actions in a Mechanical Framework	21
2.2 The Continuous Medium	23
2.3 The Mechanical Ether Field Theory	26
2.4 The Electromagnetic Field Theory	34
<b>Part I The Geometrical Programme for Fundamental Interactions</b>	39
3 Einstein's Route to the Gravitational Field	41
3.1 Guiding Ideas	42
3.2 The Special Theory of Relativity (STR)	46
3.3 The Geometrical Interpretation of STR	50
3.4 The Introduction of Gravitational Fields: The Principle of Equivalence	52
4 The General Theory of Relativity	56
4.1 The Field and Geometry	57
4.2 The Field and Spacetime: General Covariance	59
4.3 Matter versus Spacetime and the Field: Mach's Principle	63
4.4 The Consistency of GTR: The Genesis of Relativistic Cosmology	70
5 The Geometrical Programme	78
5.1 Einstein's Views of Spacetime and Geometry	78
5.2 The Geometrical Programme: Strong and Weak Versions	86
	vii

viii	<i>Contents</i>	
	5.3 Further Developments	89
	5.4 Topological Investigations: Singularities, Horizons, and Black Holes	97
	<b>Part II The Quantum Field Programme for Fundamental Interactions</b>	107
6	The Rise of Quantum Theory	109
	6.1 The Quantization of Motion	109
	6.2 The Quantization of Radiation	111
	6.3 The Birth of Matrix Mechanics	116
	6.4 The Duality of Matter, Individuality, and Quantum Statistics	118
	6.5 The Birth of Wave Mechanics	120
	6.6 Uncertainty and Complementarity	121
7	The Formation of the Conceptual Foundations of Quantum Field Theory	125
	7.1 The Tortuous Route to the Quantum Field	125
	7.2 Quantum Fields and the Ontological Foundations of QFT	150
	7.3 Interaction	155
	7.4 Renormalization	162
8	The Quantum Field Programme	184
	8.1 Essential Features	184
	8.2 Failed Attempts	186
	8.3 Various Attitudes toward Renormalizability	187
	8.4 The Axiomatic Approach	190
	8.5 The S-Matrix Theory	192
	8.6 The PCAC Hypothesis and Current Algebra	200
	8.7 Anomalies	215
	8.8 The Renormalization Group	222
	8.9 Swings of the Pendulum	227
	<b>Part III The Gauge Field Programme for Fundamental Interactions</b>	235
9	Gauge-Theoretical Origins and Tentative Steps	237
	9.1 Gauge Invariance and the Gauge Principle	237
	9.2 Speculations on Extending the Gauge Principle from the Abelian Phase Symmetry to Nonabelian Cases	239
	9.3 Early Attempts: 1957–1967	241
10	The Formation of the Conceptual Foundations of Gauge Field Theories	246
	10.1 Mechanisms for Short-Range Interactions: I. The Englert–Brout–Higgs Mechanism	246
	10.2 Mechanisms for Short-Range Interactions: II. Asymptotic Freedom and Quark Confinement	257
	10.3 Renormalizability	262
	10.4 Global Features	270
	10.5 Open Questions	274

<i>Contents</i>		ix
11	The Gauge Field Programme	290
11.1	The Rise of the Standard Model	291
11.2	Further Extensions	309
11.3	Ontological Synthesis: Quantum Gravity without a Fixed Background Spacetime	313
11.4	GFP as a Synthesis of GP and QFP	317
11.5	Stagnation and a New Direction: Effective Field Theories	323
12	Ontological Synthesis and Scientific Realism	337
12.1	Two Views on How Science Develops	337
12.2	Frameworks Opposed to the Incommensurability Thesis	342
12.3	Scientific Realism: Beyond Structuralism and Historicism	350
12.4	Conceptual Revolutions via Ontological Synthesis: Epistemic and Ontic Emergence	354
12.5	Conceptual Revolutions and Scientific Realism	361
12.6	Conceptual Revolutions and Scientific Rationality	364
	<i>Appendices</i>	369
	<i>Appendix 1 The Rise of Intrinsic, Local, and Dynamic Geometry</i>	369
	<i>Appendix 2 Homotopy Classes and Homotopy Groups</i>	374
	<i>References</i>	376
	<i>Name Index</i>	422
	<i>Subject Index</i>	428
