Foreword *page* ix
Preface xi
Preface to the first edition xiii

1 Historical Perspective 1
1.1 Three periods 2
1.2 The state vector 7
1.3 Other formalisms, field theory, path integrals 17

2 Present Situation, Remaining Conceptual Difficulties 21
2.1 Von Neumann's infinite regress/chain 24
2.2 Schrödinger's cat, measurements 26
2.3 Wigner's friend 32
2.4 Negative and "interaction-free" measurements 34
2.5 A variety of points of view 41
2.6 Unconvincing arguments 48

3 The Theorem of Einstein, Podolsky, and Rosen 49
3.1 A theorem 50
3.2 Of peas, pods, and genes 52
3.3 Transposition to physics 56
3.4 Generalizations 67

4 Bell Theorem 73
4.1 Bell inequalities 74
4.2 Various derivations of the theorem 87
4.3 Impact of the Bell theorem, loopholes 102

5 Other Inequalities, Cirelson's Limit, Signaling 117
5.1 Other inequalities 117

Franck Laloë
Table of Contents
More Information

5.2 Cirelson's theorem 137
5.3 Relativity, locality, field theory 140
5.4 No instantaneous signaling 143

6 More Theorems 153
6.1 Quantum properties of GHZ states 153
6.2 Cabello's inequality 163
6.3 Hardy's impossibilities 165
6.4 Bell–Kochen–Specker theorem, contextuality 169
6.5 Reality of the quantum state, ψ-ontology theorems 179

7 Quantum Entanglement 189
7.1 A purely quantum property 190
7.2 Characterizing entanglement 195
7.3 Creating and losing entanglement 204
7.4 Quantum dynamics of a subsystem 215

8 Applications of Quantum Entanglement 223
8.1 Two theorems 223
8.2 Quantum cryptography 227
8.3 Teleporting a quantum state 234
8.4 Quantum computation and simulation 237

9 Quantum Measurement 243
9.1 Direct measurements 243
9.2 Indirect measurements 255
9.3 Conditional and continuous measurements 260

10 Experiments: Quantum Reduction Seen in Real Time 275
10.1 Single ion in a trap 276
10.2 Single electron in a trap 280
10.3 Measuring the number of photons in a cavity 282
10.4 Spontaneous phase of Bose–Einstein condensates 285

11 Various Interpretations and Reconstructions of Quantum Mechanics 293
11.1 Pragmatism in laboratories 294
11.2 Ensemble interpretations 302
11.3 Relational interpretation, relative state vector 304
11.4 Logical, algebraic, and deductive approaches 309
11.5 Veiled reality 315
11.6 Contextual quantum reality 316
11.7 History interpretation 316
11.8 Additional ("hidden") variables 328

Table of Contents
More Information

11.9 Modal interpretation 368
11.10 Modified Schrödinger dynamics 371
11.11 Transactional interpretation 391
11.12 Everett interpretation 392

Conclusion 405

12 Annex: Basic Mathematical Tools of Quantum Mechanics 409
12.1 General physical system 409
12.2 Grouping several physical systems 421
12.3 Particles in a potential 425

Appendix A **Mental Content of the State Vector** 433
Appendix B **Bell Inequalities in Nondeterministic Local Theories** 435
Appendix C **Attempting to Construct a "Separable" Quantum Theory** 439
Appendix D **Maximal Probability for a State** 442
Appendix E **The Influence of Pair Selection** 443
Appendix F **Impossibility of Superluminal Communication** 447
Appendix G **Quantum Measurements at Different Times** 452
Appendix H **Manipulating and Preparing Additional Variables** 457
Appendix I **Correlations and Trajectories in Bohmian Theory** 460
Appendix J **Models for Spontaneous Reduction of the State Vector** 473
Appendix K **Consistent Families of Histories** 478
Appendix L **Attractive Schrödinger Dynamics** 481
